

Manual

Bluetooth is a radio technology that supports short-range communication between devices. It can exchange information wirelessly among many devices including mobile phones, PDAs, wireless headsets, notebook computers, and related peripherals. Work in the 2.4GHz frequency band.

The scheme of controlling the light via Bluetooth:

1. The lights can be controlled via mobile phone Bluetooth.
2. In addition to controlling the light ON/OFF, you can also use the characteristics of the RGB light to adjust the color of the light.

Lighting control:

Not only can control the switch of lamps and lanterns, but also adjust the color and brightness. It is also equipped with system preset light modes.

Timing function:

Powerful timing function, timing on/off

Smartphone control equipment:

A smart phone is a remote control, the interface is more humane, powerful, and the operation is more intelligent. There is no need to configure the remote control separately, and the traditional remote control is easy to lose, and the remote control can not meet the needs of people.

Bluetooth connection control:

Support Bluetooth 5.0 connection communication

Note: Connections below Bluetooth 5.0 are not supported

A smart phone can be connected and paired with multiple lights at the same time, Through the APP, the user can switch the light on /off / adjust the brightness / set timer function, You can also easily adjust the color of the light on the color wheel of the APP, and change the light color atmosphere as you like.

Warning

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
