# **CERTIFICATION OF COMPLIANCE**

FCC ID.

2AZKWREBE-TZ75L

APPLICANT

# ATEC IoT CO., LTD.

Equipment Class	:	Digital Transmission System (DTS)
Manufacturing Description	:	Electronic Shelf Label
Manufacturer	:	SUZHOU NIHONE Electronic Technology Co., LTD
Model name	:	REBE-TZ75L
Test Device Serial No.:	:	Identical prototype
Rule Part(s)	:	FCC Part 15.247 Subpart C ; ANSI C63.10 - 2013
Frequency Range	:	2405 ~ 2480 MHz Zigbee
Max. Output Power	:	Max -1.37 dBm - Conducted
Data of issue	:	May 12 ,2023

This test report is issued under the authority of:

Jabeom. Koo

Ja-Beom Koo, Manager

The test was supervised by:

Jae-Hum Yeon, Test Engineer

This test result only responds to the tested sample. It is not allowed to copy this report even partly without the allowance of the test laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

# 2-2 Equipment Under Test (EUT)

Model name	:	REBE-TZ75L
Serial number	:	Identical prototype
Date of receipt	:	April 10 ,2023
EUT condition	:	Pre-production, not damaged
Antenna type	:	Pattern Antenna (Ant1 Gain : -6.46 dBi, Ant2 Gain : -5.18 dBi)
Frequency Range	:	2405 ~ 2480 MHz
RF output power	:	Max -1.37 dBm – Conducted
Type of Modulation	:	Pi/4 DQPSK, 8DPSK
Power Source	:	DC 3 V

This product uses two antennas at one oscillation, and both antennas cannot operate at the same time, but only antennas operate at one time when transmitting.

# **2-3 Tested frequency**

	LOW	MID	HIGH
Frequency (MHz) Zigbee	2405	2440	2480

### **3.1 Summary of tests**

N/A: This product is only operated with DC voltage.

The above equipment was tested by LTA Co., Ltd. The test data, data evaluation, test procedures, and

equipment configurations shown in this report were made in accordance with the procedures given in ANSI C63.10-2013 and the energy emitted by the sample EUT tested as described in this report is in compliance with the requirements of FCC Rules Part 2 and Part 15.247 The test results of this report relate only to the tested sample identified in this report.

The tests were performed according to the method of measurements prescribed in KDB No.558074.

### $\rightarrow$ Antenna Requirement

ATEC IoT CO., LTD. FCC ID: 2AZKWREBE-TZ75E unit complies with the requirement of §15.203. The antenna type is Pattern Antenna

### **3.2 Technical Characteristics Test**

#### 3.2.1 6 dB Bandwidth

#### **Procedure:**

The bandwidth at 6 dB below the highest in-band spectral density was measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate frequencies.

After the trace being stable, Use the marker-to-peak function to set the marker to the peak of the emission. Use the marker-delta function to measure 6 dB down one side of the emission. Reset the marker-delta function, and move the marker to the other side of the emission, until it is ( as close as possible to ) even with the reference marker level. The marker-delta reading at this point is the 6 dB bandwidth of the emission.

The spectrum analyzer is set to:

Center frequency = the highest, middle and the lowest channels

RBW = 100 kHz	Span = 3 X RBW
VBW = 3 X RBW	Sweep = auto
Trace = max hold	Detector function = peak

# **3.2.3 Power Spectral Density**

#### **Procedure:**

This procedure shall be used if maximum peak conducted output power was used to demonstrate compliance.

The spectrum analyzer is set to:	
$RBW = 3 \text{ kHz} (3 \text{ kHz} \le RBW \le 100 \text{ kHz})$	Span $\geq$ 1.5 times the DTS bandwidth
VBW = 3 X RBW	Sweep = auto
Detector function = peak	Trace = max hold

#### **Measurement Data : Complies**

#### Mode Ant 1

Frequency	Test Results				
(MHz)	dBm / 3 kHz BW	Result			
2405	-16.89	Complies			
2440	-16.42	Complies			
2480	-15.87	Complies			

#### Mode Ant 2

Frequency	Test Results				
(MHz)	dBm / 3 kHz BW	Result			
2405	-17.79	Complies			
2440	-18.36	Complies			
2480	-18.07	Complies			

- See next pages for actual measured spectrum plots.

### Minimum Standard:

Power Spectral Density	$\leq 8 \text{ dBm} @ 3 \text{ kHz BW}$
------------------------	---

#### **Measurement Setup**

Same as the Chapter 3.2.1 (Figure 1)

# Zigbee Ant1

# Zigbee Ant2

### 3.2.4 Band Edge

#### **Procedure:**

The Unwanted emission from the EUT were measured according to the dictates PKPSD measurement procedure in section 11.11 of ANSI C63.10-2013.

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits.

If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, as permitted under Section 5.4(4), the attenuation required shall be 30 dB instead of 20 dB.

The spectrum analyzer is set to: Center frequency = the highest, middle and the lowest channels RBW = 100 kHz  $VBW \ge 3 \text{ X RBW}$ Detector function = peak Trace = max holdSweep = auto

#### Measurement Data: Complies

#### Ant 1

Frequency	Test Res	sults
(MHz)	dBc	Result

### **3.2.5 Conducted Spurious Emissions**

#### **Procedure:**

The test follows KDB558074. The conducted spurious emissions were measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.

After the trace being stable, set the marker on the peak of any spurious emission recorded.

#### The spectrum analyzer is set to:

Span = wide enough to capture the peak level of the in-band emission and all spurious emissions

RBW = 100 kHzSweep = autoVBW = 100 kHzDetector function = peakTrace = max hold

### 3.2.6 Radiated Spurious Emissions

#### **Procedure:**

Radiated emissions from 30 MHz to 25 GHz were measured according to the methods defines in ANSI C63.10-2013.

The EUT is a placed on as turn table. For emissions testing at or below 1 GHz, the table height shall be 0.8 m above the reference ground plane. For emission measurements above 1 GHz, the table height shall be 1.5 m. The turn table shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter (EUT) was rotated through three orthogonal axes and measurement procedures for electric field radiated emissions above 1 GHz the EUT measurement is to be made "while

keeping the antenna in the 'cone of radiation' from that area and pointed at the area both in azimuth and elevation, with polarization oriented for maximum response." is still within the 3dB illumination BW of the measurement antenna.

The spectrum analyzer is set to:	
Center frequency = the worst channel	
Frequency Range = 9 kHz ~ $10^{\text{th}}$ harmonic.	
RBW = 120 kHz ( 30 MHz ~ 1 GHz)	$VBW \geq RBW$
= 1 MHz (1 GHz ~ $10^{\text{th}}$ harmonic)	
Trace = max hold	Detector function = peak
Sweep = auto	

Duty cycle : 98.89 %

below 30 MHz

The EUT configureal to transmit continuously( $D \ge 98\%$ )/ Duty Factor = 0

#### below 1 GHz (30 MHz to 1 GHz)

#### Measurement Data: Complies

- See next pages for actual measured data.
- No other emissions were detected at a level greater than 20 dB below limit include from 9 kHz to 30MHz.
- The test results for the worst of the various operating modes are presented in accordance with 6.3.4 of ANSI C63.10.
- Checked with a red circle is the fundamental frequency.

Frequency (MHz)	Limit (uV/m) @ 3 m
0.009 ~ 0.490	2400/F(kHz) (@ <b>300 m</b> )
0.490 ~ 1.705	24000/F(kHz) (@ <b>30 m</b> )
1.705 ~ 30	30(@ <b>30</b> m)
30 ~ 88	100 **
88 ~ 216	150 **
216 ~ 960	200 **
Above 960	500

#### Minimum Standard: FCC Part 15.209(a)

\*\* Except as provided in 15.209(g), fundamental emissions from intentional radiators operating under this Section shall not be located in the frequency bands 54-72 MHz, 76-88 MHz, 174-216 MHz or 470-806 MHz. However, operation within these frequency bands is permitted under other sections of this Part, e.g. 15.231 and 15.241.

### **3.2.7 AC Conducted Emissions**

#### **Procedure:**

The conducted emissions are measured in the shielded room with a spectrum analyzer in peak hold. While the measurement, EUT had its hopping function disabled at the middle channels in line with Section 15.31(m). Emissions closest to the limit are measured in the quasi-peak mode (QP) with the tuned receiver using a bandwidth of 9 kHz. The emissions are maximized further by cable manipulation and Exerciser operation. The highest emissions relative to the limit are listed.

# Minimum Standard: FCC Part 15.207(a)/EN 55022 Measurement Data: N/A

Class B

Frequency Range	quasi-peak	Average			
0.15 ~ 0.5	66 to 56 *	56 to 46 *			
0.5 ~ 5	56	46			
5 ~ 30	60	50			

\* Decreases with the logarithm of the frequency
