Storage Environment

The following conditions should be met when storing the product:

Temperature : -10℃~+40℃

Humidity : 30% to 70% relative humidity

The location where the product is placed should not be exposed to corrosive gases, such as sulfur. Chlorine or acid may cause oxidation of product electrodes resulting in poor solderability.

The products should be placed in the tool box and avoid the influence of moisture and dust. Products should be stored in a warehouse and protected from heat, vibration and direct sunlight.

The products should be stored under airtight conditions.
