

Antenna description: omnidirectional inverted-F monopole etched on main PCB

Antenna gain: gain was not characterized prior to testing. Antenna gain figures are based on testing at Element.

Frequency	Antenna Gain at Frequency
2402 MHz	3.17 dBi
2442 MHz	3.29 dBi
2480 MHz	3.86 dBi

FCC 15.203 compliance: antenna is permanently attached to the radio through a PCB trace. No connection port for an additional or alternate antenna is provided.
