Equipment Under Test (EUT)

Bluetooth module
 Model: BLE113
 Type: -
 Serial no: -
 HW version: -
 SW version: -
 FCC ID number: QOQBLE113
 Industry Canada number: 5123A-BLE113

Description of the EUT

The EUT is a Bluetooth low energy single mode module targeted for low power sensors and accessories.
 Device can be used with batteries or from DC power supply.

Classification of the device

Fixed device	☐
Mobile Device (Human body distance > 20cm)	☒
Portable Device (Human body distance < 20cm)	☐

Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing

Ratings and declarations

Operating Frequency Range (OFR): 2402 – 2480 MHz
 Channels: 40
 Channel separation: 2 MHz
 Channel bandwidth: 674.4 kHz
 Conducted power: 0.54 dBm
 Transmission technique: Digital Transmission
 Modulation: GFSK
 Antenna connector type: Internal antenna
 Antenna gain: 0.5 dBi

Power Supply

Battery operated
 Operating voltage range 2,0 – 3,6 VDC
 Normal input voltage: 3.0 V coin battery or 2 x 1,5V AAA batteries
 Tested by using external power supply and 3.6 VDC voltage level

Mechanical Size of the EUT

Height: 1.9 mm	Width:15.73 mm	Depth: 9.15 mm
----------------	----------------	----------------

Peripherals

Peripheral

DC power supply Thandar TS3021S.

Samples

All tests were performed with two samples installed on to the evaluation board provided by the client.

Sample A: equipped with 50Ω connector

Sample B: normal construction.

All conducted measurements were made to sample A, and radiated measurements to sample B.

No modifications were done during the tests.

Disclaimer

This test report is issued under SGS Fimko general terms of delivery (available on request and accessible at www.fi.sgs.com). Attention is drawn to the limitations of liability, indemnification and jurisdictional issues defined therein. Unless otherwise stated: (a) the results shown in this document refer only to the sample(s) tested and (b) such sample(s) are retained for three months. This document cannot be reproduced except in full, without prior approval of SGS Fimko.

Any unauthorized alteration, forgery or falsification of the content or appearance of this report is unlawful and offenders may be prosecuted to the fullest extent of the law

SUMMARY OF TESTING

Test Specification	Description of Test	Result
§15.247(b)(3) / RSS-210 A8.4	Maximum Peak Conducted Output Power	PASS
§15.247(a)(2) / RSS-210 A8.2	6 dB Bandwidth	PASS
§15.247(e) / RSS-210 A8.2	Power Spectral Density	PASS
RSS-GEN 4.6.1	99% Occupied Bandwidth	PASS
§15.247(d) / RSS-210 A8.5	100 kHz Bandwidth of Frequency Band Edges and Conducted Spurious Emissions	PASS
§15.209(a), §15.247(d) / RSS-210 A8.5	Radiated Emissions Within The Restricted Bands	PASS
§15.109 / RSS-GEN 7.2.3.2	Unintentional Radiated Emissions	PASS
§15.207 / RSS-GEN 7.2.2	Conducted emissions	PASS

EUT Test Conditions During Testing

The EUT was in continuous transmit mode during all the tests.

The hopping was stopped and the EUT was configured into the wanted channel. Normal modulation and duty cycle was applied in all the tests.

Following channels were used during the tests when the hopping was stopped:

Channel LOW (CH 0) = 2402 MHz

Channel MID (CH 20) = 2442 MHz

Channel HIGH (CH 39) = 2480 MHz

Test Facility

☒ Testing Location / address: FCC registration number: 178986 Industry Canada registration number: 8708A-2	SGS Fimko Ltd Karakaarenkuja 4 FI-02610, ESPOO FINLAND

Maximum Peak Conducted Output Power

Standard: ANSI C63.10 (2009)
Tested by: JJM
Date: 5.4.2013
Humidity: 18 %
Temperature: 23 °C
Measurement uncertainty $\pm 2,87\text{dB}$ Level of confidence 95 % (k = 2)

FCC Rule: 15.247(b) (1)

For frequency hopping systems operating in the 2400-2483.5 MHz, employing less than 75 channels limit is 0.125 Watt. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signalling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the *maximum conducted output power* is the highest total transmit power occurring in any mode.

Results:

Channel	Conducted Power [dBm]	Limit [dBm]	Margin [dBm]	Result
Low	0.54	30	29.46	PASS
Mid	-0.39	30	30.39	PASS
High	-1.27	30	31.27	PASS

Date: 5.APR.2013 14:27:56

Transmitter Radiated Emissions 30 – 1000 MHz

Standard:	ANSI C63.10	(2009)
Tested by:	JJM	
Date:	22 – 23.4.2013	
Humidity:	20 - 21%	
Temperature:	19 °C	
Measurement uncertainty	± 4.51 dB	Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a).

The correction factor in the final result table contains the sum of the transducers (antenna + amplifier + cables). The QuasiPeak value is the measured value corrected with the correction factor.

Measured Peak Values In The Frequency Range 30 MHz - 1000 MHz.

FCC Part 15 Class B Spurious Emission 30-1000MHz 3m

— FCC Part 15 Class B Electric Field Strength 3 m QP.LimitLine — Preview Result 1V-PK+ — Preview Result 1H-PK+

Figure 4. Measured curve with peak-detector. Channel LOW.

No final measurements were made since the emission level was more than 10 dB from the limit.

FCC Part 15 Class B Spurious Emission 30-1000MHz 3m

Figure 5. Measured curve with peak-detector. Channel MID.

No final measurements were made since the emission level was more than 10 dB from the limit.

FCC Part 15 Class B Spurious Emission 30-1000MHz 3m

Figure 6. Measured curve with peak-detector. Channel HIGH.

No final measurements were made since the emission level was more than 10 dB from the limit.

Transmitter Radiated Emissions 1 000 – 26 500 MHz

Measured Peak and Average Values In The Frequency Range 1 000 MHz – 4 000 MHz.

The correction factor in the final result tables contains the sum of the transducers (antenna + amplifier + cables).
The Max Peak and Average values are measured values corrected with the correction factor.

FCC Part 15 Class B Spurious Emission 1-4GHz 3m (optimized 2.4 GHz TX)

Figure 7. Measured curve with peak- and average detector. Channel LOW.

Final measurements from the worst frequencies

Frequency (MHz)	MaxPeak (dBμV/m)	Meas. Time (ms)	Bandwidth (kHz)	Height (cm)	Polarization	Azimuth (deg)	Corr. (dB)	Margin (dB)	Limit (dBμV/m)
2369.775000	50.2	1000.0	1000.000	100.0	V	266.0	0.5	23.7	73.9

Transmitter Band Edge Measurement and Conducted Spurious Emissions

Standard: ANSI C63.10 (2009)
Tested by: JJM
Date: 1545.2013
Humidity: 25 %
Temperature: 24 °C
Measurement uncertainty ± 2.87 dB Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

Band Edge Attenuation	
Lower Band Edge	Upper Band Edge
-39.41 dBc	-44.37 dBc
Limit: -20dBc

Receiver Radiated Emissions 30 – 26 500 MHz

Standard: ANSI C63.10 (2009)
Tested by: JJM
Date: 22 – 23.4.2013
Humidity: 20 - 21%
Temperature: 19 °C
Measurement uncertainty ± 4.51 dB Level of confidence 95 % (k = 2)

FCC Rule: 15.109

The EUT was in a receiving mode and measurement was performed using middle channel only.

The correction factor in the final result table contains the sum of the transducers (antenna + amplifier + cables).

The QuasiPeak value is the measured value corrected with the correction factor.

Measured Peak Values In The Frequency Range 30 MHz - 1000 MHz.

FCC Part 15 Class B Spurious Emission 30-1000MHz 3m

Figure 33. Measured curve with peak-detector.

No final measurements were made since the emission level was more than 10 dB from the limit.

Measured Peak Values In The Frequency Range 1 000 MHz – 18 000 MHz.

FCC Part 15 Class B Spurious Emission 1-18GHz 3m Rx

Figure 34. Measured curve with peak-and average detector.

Final measurements from the worst frequencies

Table 20. Final Average results.

Conducted emissions

Standard: ANSI C63.10 (2009)
Tested by: JJM
Date: 23.4.2013
Humidity: 21 %
Temperature: 20 °C
Measurement uncertainty $\pm 2,87$ dB Level of confidence 95 % (k = 2)

FCC Rule: 15.207

Conducted disturbance voltage was measured with an artificial main network from 150 kHz to 30 MHz with 4.5 kHz steps and a resolution bandwidth of 9 kHz. Measurements were carried out with peak and average detectors.

During the test the EUT was powered from the separate AC / DC power supply which was connected to the LISN. The supply voltage through the LISN to the power supply was 115 VAC / 60 Hz.

Test results

Conducted Emission Mains FCC Part 15 Class B with ESH3-Z5 8019
