

<p>Solder Board-Component View 22</p>	 <p>A photograph showing a small, rectangular green PCB component mounted on a blue textured surface. A black ruler with white markings is placed below the component for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The component is positioned between the 10 mm and 20 mm marks. The component has several small circular features and a central rectangular area.</p>
<p>Solder Board-Component View 23</p>	 <p>A photograph showing a small, rectangular green PCB component mounted on a blue textured surface. A black ruler with white markings is placed below the component for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The component is positioned between the 10 mm and 20 mm marks. The component has several small circular features and a central rectangular area.</p>

<p>Solder Board-Component View 26</p>	 A microscopic view of a small green printed circuit board (PCB) component mounted on a blue textured substrate. The component is rectangular and features a gold-colored connector strip on its top edge. It is positioned on a black surface with a white millimeter ruler for scale. The ruler shows markings from 0 to 100 mm, with the component's length being approximately 10 mm. A circular blue mark is visible on the black surface below the component.
<p>Solder Board-Component View 27</p>	 A microscopic view of a small green PCB component mounted on a blue textured substrate. This component is more complex than the one in View 26, with several small circular components and a gold-colored connector strip. It is positioned on a black surface with a white millimeter ruler for scale. The ruler shows markings from 0 to 100 mm, with the component's length being approximately 10 mm. A circular blue mark is visible on the black surface below the component.
