

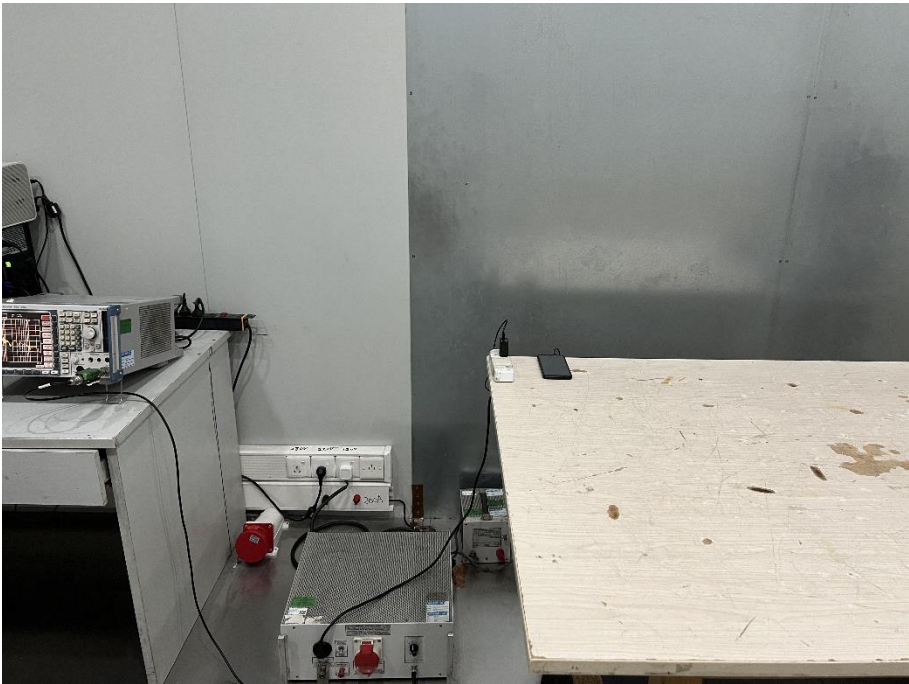

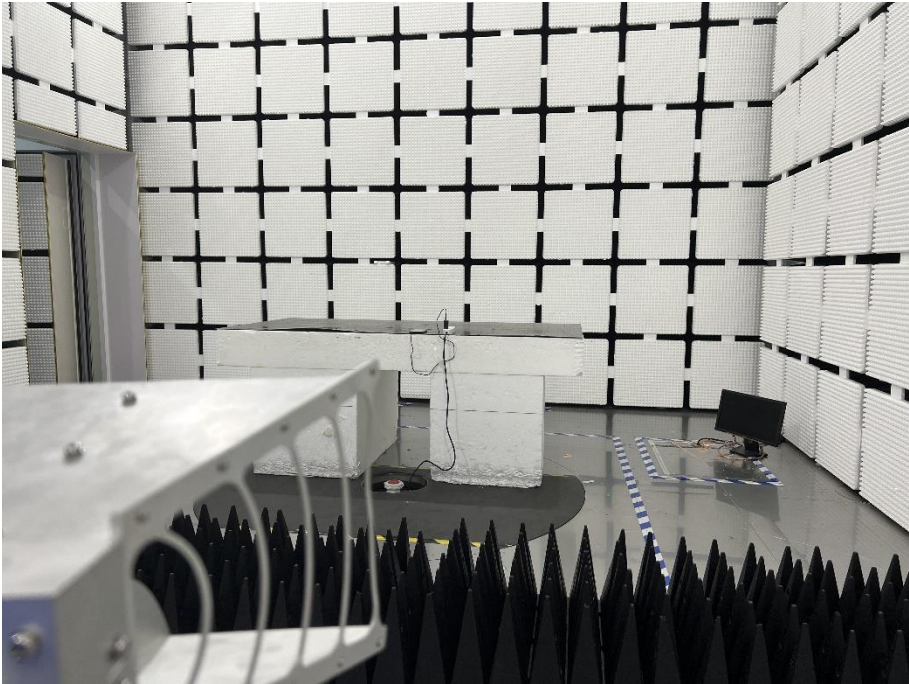

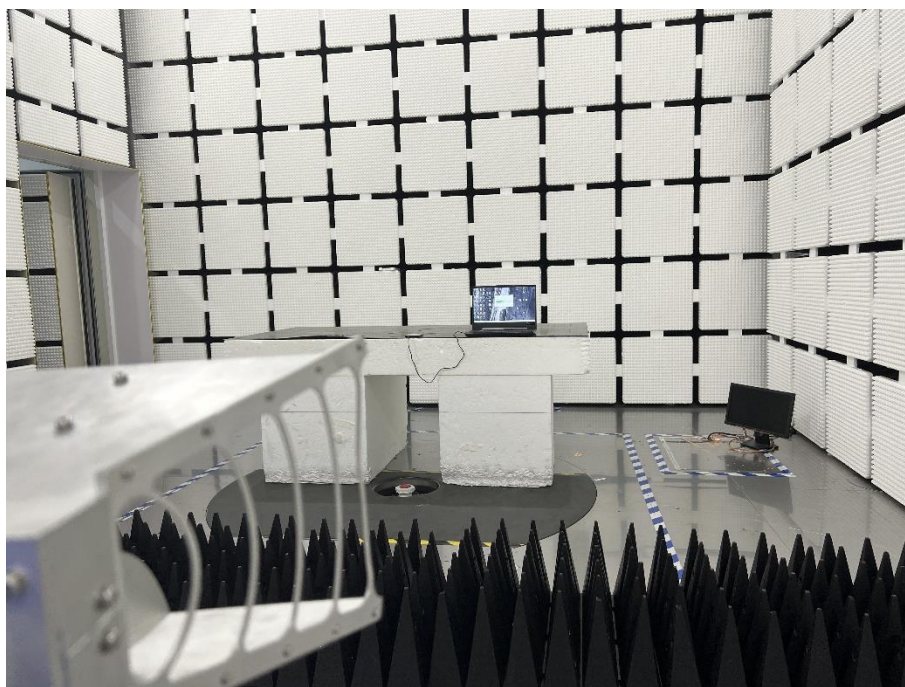

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing the setup for a conducted emission test. On the left, a piece of electronic equipment, likely a spectrum analyzer or a power supply, is connected to a power source. A large, flat, light-colored surface, possibly a wooden board or a metal plate, is positioned on the right. The background is a plain, light-colored wall.
Radiation Emission Test View (30MHz to 1GHz)	 A photograph showing the interior of an anechoic chamber used for radiation emission testing. The walls, floor, and ceiling are covered with white, pyramid-shaped electromagnetic absorbers designed to eliminate reflections. A test setup is visible in the center, including a computer monitor and various cables. The floor is marked with blue and white striped tape, indicating a restricted access area.

Radiation Emission Test View (30MHz to 1GHz)	 A photograph of an anechoic chamber interior. The walls, floor, and ceiling are covered with white, cross-shaped electromagnetic wave absorbers. In the center, a white test table holds a laptop. A blue and white striped safety line is on the floor. A metal frame is visible in the foreground.
Radiation Emission Test View (Above 1GHz)	 A photograph of the same anechoic chamber, but with a different setup. The foreground is dominated by a large, black, pointed electromagnetic wave absorber. The white absorbers on the walls and ceiling are still visible. The test table and laptop are in the background.
