| Standard     | : 47 CFR Part 2.1091  |

We, SPORTON INTERNATIONAL INC has been evaluated this product in accordance with 47 CFR Part2.1091 and it complies with applicable limit.

Sporton Lab is accredited to ISO 17025 by Taiwan Accreditation Foundation (TAF code: 1190) and the FCC designation No. TW1190 under the FCC 2.948(e) by Mutual Recognition Agreement (MRA) in FCC evaluation.

The results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC. Laboratory, the test report shall not be reproduced except in full.

#### SPORTON LAB. RF EXPOSURE EVALUATION REPORT

# 3. <u>RF Exposure Limit Introduction</u>

According to ANSI/IEEE C95.1-1992, the criteria listed in Table 1 shall be used to evaluate the environmental impact of human exposure to radio frequency (RF) radiation as specified in §1.1310.

| Frequency range<br>(MHz) | Electric field strength<br>(V/m) | Magnetic field strength<br>(A/m) | Power density<br>(mW/cm <sup>2</sup> ) | Averaging time<br>(minutes) |
|--------------------------|----------------------------------|----------------------------------|--|-----------------------------|
| 946 - 94<br>1            | (A) Limits for O                 | ccupational/Controlled Expos     | sures                                  | 8)<br>8)                    |
| 0.3-3.0                  | 614                              | 1.63                             | *(100)                                 | 6                           |
| 3.0-30                   | 1842/                            | f 4.89/1                         | *(900/f2)                              | 6                           |
| 30-300                   | 61.4                             | 0.163                            | 1.0                                    | 6                           |

| 300-1500                 |                                  |                                  | f/1500                                 | 30                          |
| 1500-100,000             |                                  |                                  | 1.0                                    | 30                          |

The MPE was calculated at 20 cm to show compliance with the power density limit.

The following formula was used to calculate the Power Density:

$$S = \frac{PG}{4\pi R^2}$$

Where:

S = Power Density

P = Output Power at Antenna Terminals

G = Gain of Transmit Antenna (linear gain)

R = Distance from Transmitting Antenna

### 4. Radio Frequency Radiation Exposure Evaluation

#### 4.1. Standalone Power Density Calculation

|          | LTE Band 26 | 1.34                  | 24.00                     | 341.98                | 0.068                                 | 0.543              |

#### **Conclusion:**

According to 47 CFR §2.1091, the RF exposure analysis concludes that the RF Exposure is FCC compliant.
