# 2. Evaluation Method

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is  $\leq$  1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

## 3. Limit

3. 1 Refer Evaluation Method

<u>ANSI C95.1–2019</u>: IEEE Standard for Safety Levels with Respect to Human Exposure to Electric, Magnetic, and Electromagnetic Fields, 0 Hz to 300 GHz

<u>FCC KDB publication 447498 D01 General 1 RF Exposure Guidance v06:</u> Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies.

FCC CFR 47 part1 1.1310: Radiofrequency radiation exposure limits.

FCC CFR 47 part2 2.1091: Radiofrequency radiation exposure evaluation: mobile devices.

#### 3. 2 Limit

Limits for Maximum Permissible Exposure (MPE)/Controlled Exposure

| Frequency                                   | Electric Field   | Magnetic Field    | Power Density          | Averaging Time                          |  |  |  |
|---|------------------|-------------------|------------------------|---|--|--|--|
| Range(MHz)                                  | Strength(V/m)    | Strength(A/m)     | (mW/cm²)               | (minute)                                |  |  |  |
| Limits for Occupational/Controlled Exposure |                  |                   |                        |   |  |  |  |
| 0.3 – 3.0                                   | 614              | 1.63              | (100) *                | 6                                       |  |  |  |

## 7.Evaluation Results

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r =20cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

## 7.1 Standalone Evaluation

#### Remark:

1. Output power including tune-up tolerance;

2. MPE evaluate distance is 20cm from user manual provide by manufacturer.

#### 8. Simultaneous Transmission MPE Evaluation

Shenzhen LCS Compliance Testing Laboratory Ltd. Add: 101, 201 Bldg A & 301 Bldg C, Juji Industrial Park Yabianxueziwei, Shajing Street, Baoan District, Shenzhen, 518000, China Tel: +(86) 0755-82591330 | E-mail: webmaster@lcs-cert.com | Web: www.lcs-cert.com Scan code to check authenticity

The EUT support one BT modular and one NB-IoT modular, BT modular and NB-IoT modular share difference antenna, so need consider simultaneous transmission;

According to KDB447498 for Transmitters used in mobile exposure conditions for simultaneous transmission operations;  $\sum of MPE ratios \le 1.0$ 

| BLE MPE ratios | NB-NoT MPE ratios | ∑ MPE ratios | Limit | Results |
|----------------|-------------------|--------------|-------|---------|
| 0.000315       | 0.3024            | 0.3027       | 1.0   | Pass    |

Remark:

- 1. Output power including turn-up tolerance;
- 2. Output power is burst average power;
- 3. MPE evaluate distance is 20cm from user manual provide by manufacturer;
- 4. MPE values =  $PG/4\pi R^2$

#### 9. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
