

Test Report

Report No.: MTi230830001-05E1

Date of issue: 2023-09-19

Applicant: Shenzhen Autral Technology Innovation Co.,Ltd.

Product: Wireless charging

Model(s): LCQ1010

FCC ID: 2BAST-LCQ1010

Shenzhen Microtest Co., Ltd.

Instructions

- 1. This test report shall not be partially reproduced without the written consent of the laboratory.
- 2. The test results in this test report are only responsible for the samples submitted
- 3. This test report is invalid without the seal and signature of the laboratory.
- 4. This test report is invalid if transferred, altered, or tampered with in any form without authorization.
- 5. Any objection to this test report shall be submitted to the laboratory within 15 days from the date of receipt of the report.

1 General Description

1.1 Description of the EUT

Product name:	Wireless charging
Model name:	LCQ1010
Series Model:	N/A
Model difference:	N/A
Electrical rating:	Input: DC 5V 3A,9V2.22A Wireless Output: 5W,7.5W,10W,15W
Accessories:	Cable: USB-C to USB-C cable
Hardware version:	V1.0
Software version:	V1.0
Test sample(s) number:	MTi230830001-05S1001
RF specification	
Operating frequency range:	115-205KHz
Modulation type:	ASK
Antenna(s) type:	Coil Antenna

1.2 Description of test modes

	-	
No.	Emission test modes	
Mode1	Wireless Output(5W)	
Mode2	Wireless Output(7.5W)	
Mode3	Wireless Output(10W)	
Mode4	Wireless Output(15W)	
Mode4	Stand by	

1.3 Environmental Conditions

During the measurement the environmental conditions were within the listed ranges:

Temperature:	15°C ~ 35°C
Humidity:	20% RH ~ 75% RH
Atmospheric pressure:	98 kPa ~ 101 kPa

1.4 Description of support units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

Support equipment list						
Description	Model	Serial No.	Manufacturer			
wireless charging load	YBZ1.1	/	YBZ			
HUAWEI QUICK CHARGE(18W) HW-059200CHQ		B6828JLC215475	HUAWEI			
Support cable list						
Description Length (m)		From	То			
/ /		1	1			

1.5 Measurement uncertainty

Measurement	Uncertainty
Conducted emissions (AMN 150kHz~30MHz)	±3.1dB
Occupied channel bandwidth	±3 %
Radiated spurious emissions (9kHz~30MHz)	±4.3dB
Radiated spurious emissions (30MHz~1GHz)	±4.7dB
Temperature	±1 °C
Humidity	± 5 %

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

2 Summary of Test Result

No.	Item	Standard	Requirement	Result
1	Antenna requirement	47 CFR Part 15C	47 CFR Part 15.203	Pass
2	Conducted Emission at AC power line	47 CFR Part 15C	47 CFR Part 15.207(a)	Pass
3	20dB Occupied Bandwidth	47 CFR Part 15C	47 CFR Part 15.215(c)	Pass
4	Emissions in frequency bands (below 30MHz)	47 CFR Part 15C	47 CFR Part 15.209	Pass
5	Emissions in frequency bands (30MHz - 1GHz)	47 CFR Part 15C	47 CFR Part 15.209	Pass

3 Test Facilities and accreditations

3.1 Test laboratory

Test laboratory:	Shenzhen Microtest Co., Ltd.		
Test site location:	101, No.7, Zone 2, Xinxing Industrial Park, Fuhai Avenue, Xinhe Community, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China		
Telephone:	(86-755)88850135		
Fax:	(86-755)88850136		
CNAS Registration No.:	CNAS L5868		
FCC Registration No.:	448573		
IC Registration No.:	21760		
CABID:	CN0093

5 Evaluation Results (Evaluation)

5.1 Antenna requirement

Test Requirement:	Refer to 47 CFR Part 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.
-------------------	---

5.1.1 Conclusion:

The antenna of the EUT is permanently attached.
The EUT complies with the requirement of FCC PART 15.203.

6 Radio Spectrum Matter Test Results (RF)

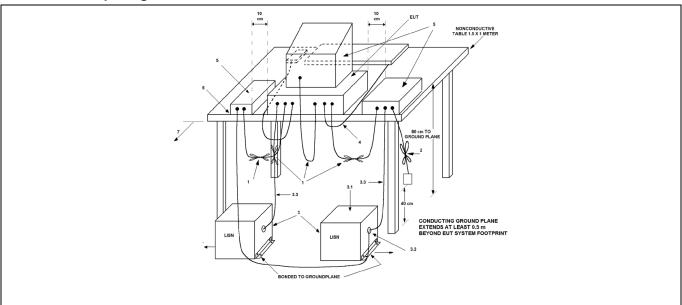

6.1 Conducted Emission at AC power line

Test Requirement:	Except as shown in paragraphs (b)and (c)of this section, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 µH/50 ohms line impedance stabilization network (LISN).					
Test Limit:	Frequency of emission (MHz)	()				
		Quasi-peak	Average			
	0.15-0.5	66 to 56*	56 to 46*			
	0.5-5	56	46			
	5-30 60 50					
	*Decreases with the logarithm of the frequency.					
Test Method:	ANSI C63.10-2013 section 6.2					
Procedure:	Refer to ANSI C63.10-2013 section 6.2, standard test method for ac power-line conducted emissions from unlicensed wireless devices					

6.1.1 E.U.T. Operation:

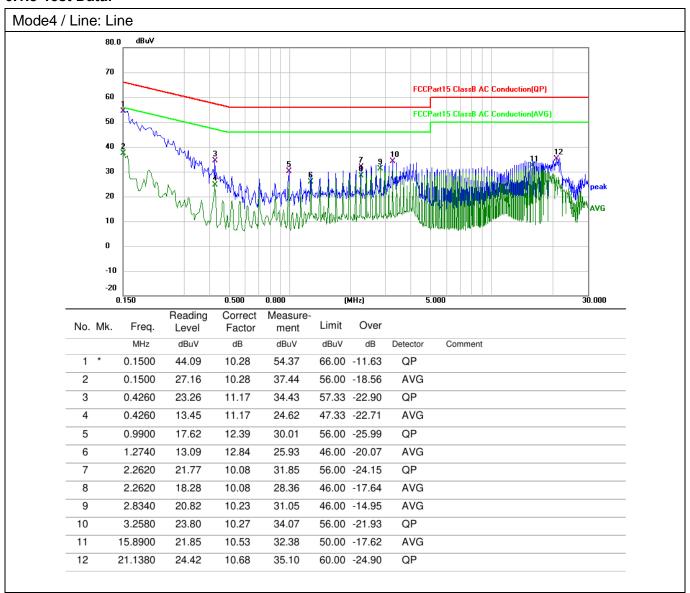

Operating Environment:							
Temperature: 25.6 °C Humidity: 61 % Atmospheric Pressure: 101 kPa							
Pre test mode:	Pre test mode: Mode1, Mode2, Mode3, Mode4, Mode5						
Final test mode: All of the listed pre-test mode were tested, only the data of the worst mode (Mode4) is recorded in the report						of the worst mode

6.2 20dB Occupied Bandwidth

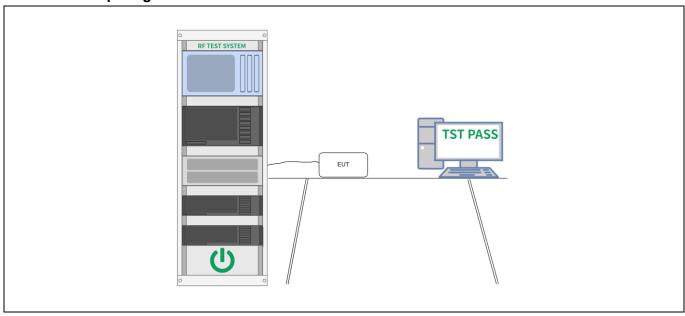

otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated. Test Method: ANSI C63.10-2013, section 6.9.2 a) The spectrum analyzer center frequency is set to the nominal EUT channe center frequency. The span range for the EMI receiver or spectrum analyzer shall be between two times and five times the OBW. b) The nominal IF filter bandwidth (3 dB RBW) shall be in the range of 1% to 5% of the OBW and video bandwidth (VBW) shall be approximately three times RBW, unless otherwise specified by the applicable requirement. c) Set the reference level of the instrument as required, keeping the signal from exceeding the maximum input mixer level for linear operation. In general, the peak of the spectral envelope shall be more than [10 log (OBW/RBW)] below the reference level. Specific guidance is given in 4.1.5.2. d) Steps a) through c) might require iteration to adjust within the specified tolerances. e) The dynamic range of the instrument at the selected RBW shall be more than 10 dB below the target "-xx dB down" requirement; that is, if the requirement calls for measuring the -20 dB OBW, the instrument noise floor at the selected RBW shall be at least 30 dB below the reference value. f) Set detection mode to peak and trace mode to max hold. g) Determine the reference value: Set the EUT to transmit an unmodulated carrier or modulated signal, as applicable. Allow the trace to stabilize. Set the spectrum analyzer marker to the highest level of the displayed trace (this is the reference value). h) Determine the "-xx dB down amplitude" using [(reference value) - xx]. Alternatively, this calculation may be made by using the marker-delta function of the instrument. i) If the reference value is determined by an unmodulated carrier, then turn the EUT modulation ON, and either clear the existing trace or start a new trace on the spectrum analyzer and allow the new trace to stabilize. 	30-88	100 **	3		
	88-216	150 **	3		
	216-960	200 **	3		
	Above 960	500	3		
	However, operation within these frequency bands is permitted under sections of this part, e.g., §§ 15.231 and 15.241.				
	limits in paragraphs (a) However, the peak field maximum permitted av any condition of moduli (b)of this section, the p	n, for frequencies above 1000 and (b)of this section are based strength of any emission shall erage limits specified above ation. For point-to-point oper eak field strength shall not exters along the antenna azim	sed on average limits. nall not exceed the by more than 20 dB under ation under paragraph xceed 2500		
Test Method:	ANSI C63.10-2013 sec	tion 6.5			
Procedure:	ANSI C63.10-2013 sec	tion 6.5			

6.4.1 E.U.T. Operation:

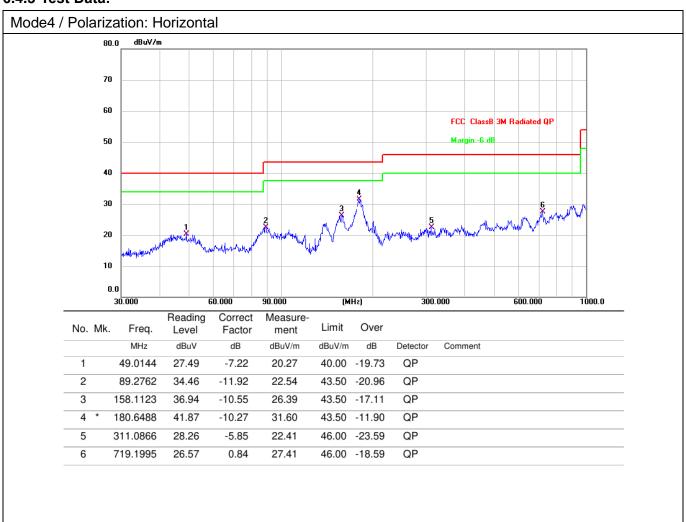

Operating Environment:							
Temperature: 15.4 °C Humidity: 20.4 % Atmospheric Pressure: 100 kPa						100 kPa	
Pre test mode:	Pre test mode: Mode1, Mode2, Mode3, Mode4, Mode5						
Final test mode: All of the listed pre-test mode were tested, only the data of the worst mode (Mode4) is recorded in the report					of the worst mode
