1 Applicant information

Manufacturer name: SuperCom LTD
Address: 3 Rothschild St, Tel Aviv, 6688106, Israel 6713412
Telephone: +972-9-8890880
E-Mail: Sanny.raviv@megger.com
Contact name: Mr. Sanny Raviv

2 Equipment under test attributes

Product name: PureBeacon
Product type: Transceiver
Model(s): PureBeacon3.0
Part number: PRF-PUREBEACON3.0
Hardware version: 3.2
Software release: 1.0.0.34.40
Receipt date: 06-Aug-24

3 Manufacturer information

Manufacturer name: SuperCom LTD
Address: 3 Rothschild St, Tel Aviv, 6688106, Israel 6713412
Telephone: +972-9-8890880
E-Mail: Sanny.raviv@megger.com
Contact name: Mr. Sanny Raviv

4 Test details

Project ID: 54670
Location: Hermon Laboratories Ltd. P.O. Box 23, Binyamina 3055001, Israel
Test conducted: 28-Aug-24
Test specification(s): FCC 47CFR part 27

5 Tests summary

Test	Status
Transmitter characteristics Section 27.53(m)(2), Radiated out of band emission	Pass*

The relevant test was done to support operation of LTE radio module approved by FCC under FCC ID: RI7LE910CXWWX simultaneously transmitting with PureBeacon3.0 radio and submit Application for certification PureBeacon3.0 under FCC ID: 2BAX3-PUREBEACON3 following FCC 15.31(k) and FCC 2.947(f) requirements.

Testing was completed against all relevant requirements of the test standard. The results obtained indicate that the product under test complies in full with the requirements tested.

The test results relate only to the items tested. Pass/ fail decision was based on nominal values.

6 EUT description

6.1 General information

The PureBeacon home unit is an optional accessory which enables indoor surveillance of Offenders when GPS is either not available or when the PureTrack/PureOne devices have low GPS signal reception. The PureBeacon communicates with the PureTrack/PureOne device to indicate that the Offender is currently in a pre-defined zone. The PureBeacon is AC powered and contains an internal battery backup capable of providing approximately 75 hours of operation. The AC/DC adapter manufactured by SuperCom, model PRF-QBEACON3.0-CR was used during the testing.

It incorporates a quick charging station for the PureOne's portable charger and contains an LED interface and physical Button Press for multiple added functionalities.

6.2 Test configuration

6.3 Changes made in the EUT

No changes were implemented in the EUT during testing.

Test specification: Section 27.53, Radiated spurious emissions			
Test procedure: 47 CFR, Section 2.1053			
Test mode: Compliance		Verdict: PASS	
Date(s): 30-Jul-23			
Temperature: 24 °C	Relative Humidity: 48 %	Air Pressure: 1012 hPa	Power: 230 VAC, 50 Hz

7 Transmitter tests according to 47CFR part 27

7.1 Radiated out of band emission measurements at BLE and LTE module simultaneous transmitting mode

7.1.1 General

This test was performed to measure radiated spurious emissions from the EUT. Specification test limits are given in Table 7.1.1.

Table 7.1.1 Radiated spurious emission test limits

Frequency, MHz	Attenuation below carrier, dBc	ERP of spurious, dBm	Equivalent field strength limit @ 3m, dB(μV/m)***
0.009 – 10 th harmonic*	43+10logP**	-13	84.4

* - Excluding the band emission

** - P is transmitter output power in Watts

*** - Equivalent field strength limit was calculated from maximum allowed ERP of spurious as follows:

$$E = \sqrt{30 \times P \times 1.64} / r,$$

where P is ERP in Watts, 1.64 is numeric gain of ideal dipole and r is antenna to EUT distance in meters

7.1.2 Test procedure for spurious emission field strength measurements in 9 kHz to 30 MHz band

7.1.2.1 The EUT was set up as shown in Figure 7.1.1, energized and the performance check was conducted.

7.1.2.2 The specified frequency range was investigated with antenna connected to spectrum analyzer. To find maximum radiation the turntable was rotated 360° and the measuring antenna was rotated around its vertical axis.

7.1.2.3 The worst test results (the lowest margins) were recorded in Table 7.1.2 and shown in the associated plots.

7.1.3 Test procedure for spurious emission field strength measurements above 30 MHz

7.1.3.1 The EUT was set up as shown in Figure 7.1.2, energized and the performance check was conducted.

7.1.3.2 The specified frequency range was investigated with antenna connected to spectrum analyzer. To find maximum radiation the turntable was rotated 360° and the measuring antenna height was swept from 1 to 4 m in both, vertical and horizontal, polarizations.

7.1.3.3 The worst test results (the lowest margins) were recorded in Table 7.1.2 and Table 7.1.3 and shown in the associated plots.

Frequency, MHz	Measured antenna factor (with preamplifier), dB/m
10000	1.8
10500	1.0
11000	0.3
11500	-0.5
12000	3.1
12500	1.4
13000	-0.3
13500	-0.4
14000	2.5
14500	2.2
15000	1.9
15500	0.5
16000	2.1
16500	1.2
17000	0.6
17500	3.1
18000	4.2

The antenna factor shall be added to receiver reading in dB μ V to obtain field strength in dB μ V/m.

10 APPENDIX C Measurement uncertainties

Expanded uncertainty at 95% confidence in Hermon Labs EMC measurements

Test description	Expanded uncertainty
Transmitter tests	
Spurious emissions radiated 30 MHz – 40 GHz (substitution method)	± 4.5 dB

Hermon Laboratories is accredited by A2LA for calibration according to present requirements of ISO/IEC 17025 and NCSL Z540-1. The accreditation is granted to perform calibration of parameters that are listed in the Scope of Hermon Laboratories Accreditation.

Hermon Laboratories calibrates its reference and transfer standards by calibration laboratories accredited to ISO/IEC 17025 by a mutually recognized Accreditation Body or by a recognized national metrology institute. All reference and transfer standards used in the calibration system are traceable to national or international standards.

In-house calibration of all test and measurement equipment is performed on a regular basis according to Hermon Laboratories calibration procedures, manufacturer calibration/verification procedures or procedures defined in the relevant standards. The Hermon Laboratories test and measurement equipment is calibrated within the tolerances specified by the manufacturers and/or by the relevant standards.

11 APPENDIX D Test laboratory description

Tests were performed at Hermon Laboratories Ltd., which is a fully independent, private, EMC, Radio, Safety, Environmental and Telecommunication testing facility.

Hermon Laboratories is recognized and accredited by the Federal Communications Commission (USA) for relevant parts of Code of Federal Regulations 47 (CFR 47), Test Firm Registration Number is 927748, Designation Number is IL1001; Recognized by Innovation, Science and Economic Development Canada for wireless and terminal testing (ISED), ISED #2186A, CAB identifier is IL1001; Certified by VCCI, Japan (the registration numbers are R-10808 for OATS, R-1082 for anechoic chamber, G-10869 for RE measurements above 1 GHz, C-10845 for conducted emissions site and T-11606 for conducted emissions at telecommunication ports).

The laboratory is accredited by American Association for Laboratory Accreditation (USA) according to ISO/IEC 17025 for electromagnetic compatibility, product safety, telecommunications testing, environmental simulation and calibration (for exact scope please refer to Certificate No. 839.01, 839.03 and 839.04).

Address: P.O. Box 23, Binyamina 3055001, Israel.
Telephone: +972 4628 8001
Fax: +972 4628 8277
e-mail: mail@hermonlabs.com
website: www.hermonlabs.com

Person for contact: Mr. Michael Nikishin, EMC&Radio group manager

12 APPENDIX E Specification references

47CFR part 27: 2022	Private land mobile radio services
47CFR part 2: 2023	Frequency allocations and radio treaty matters; general rules and regulations
ANSI/TIA/EIA-603-E:2016	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards

13 APPENDIX F Abbreviations and acronyms

A	ampere
AC	alternating current
A/m	ampere per meter
AM	amplitude modulation
AVRG	average (detector)
BB	broad band
cm	centimeter
dB	decibel
dBm	decibel referred to one milliwatt
dB(μV)	decibel referred to one microvolt
dB(μV/m)	decibel referred to one microvolt per meter
dB(μA)	decibel referred to one microampere
dBΩ	decibel referred to one Ohm
DC	direct current
EIRP	equivalent isotropically radiated power
ERP	effective radiated power
EUT	equipment under test
F	frequency
GHz	gigahertz
GND	ground
H	height
HL	Hermon laboratories
Hz	hertz
ITE	information technology equipment
k	kilo
kHz	kilohertz
LISN	line impedance stabilization network
LO	local oscillator
m	meter
MHz	megahertz
min	minute
mm	millimeter
ms	millisecond
μs	microsecond
NA	not applicable
NB	narrow band
NT	not tested
OATS	open area test site
Ω	Ohm
QP	quasi-peak
PM	pulse modulation
PS	power supply
RE	radiated emission
RF	radio frequency
rms	root mean square
Rx	receive
s	second
T	temperature
Tx	transmit
V	volt
VA	volt-ampere
