

A photograph showing the internal components of a custom-built electronic device. The device is housed in a black rectangular enclosure. On the left, there is a silver-colored power supply unit (PSU) with a yellow honeycomb-patterned fan. To the right of the PSU, there are several large electrolytic capacitors and a complex arrangement of wires in various colors (red, black, white, blue, orange). A white plastic component, possibly a relay or a connector, is visible in the center. A ruler is placed horizontally below the device, indicating its length is approximately 30 cm. The device is resting on a blue fabric surface.
