## TEST REPORT

Report No.: BCTC2403853163E

Applicant:

Product Name: Three whale nipple vibrators

Test Model: 3834972

Tested Date:
2024-03-14 to 2024-03-19

Issued Date: 2024-03-25

## FCC ID: 2BCDZ-3834972

| Product Name: | Three whale nipple vibrators |
| :---: | :---: |
| Trademark: | UTIMI |
| Model/Type Reference: | $\begin{aligned} & 3834972 \\ & 3838002,3838004,3838006,3838008,3838009 \end{aligned}$ |
| Prepared For: | Shenzhen Unistyle Technology Co., Ltd. |
| Address: | 1-5C Lijinguoji, Baoan Qu Shenzhen Guangdong, China |
| Manufacturer: | Shenzhen Vincent Technology Co., Ltd |
| Address: | 100 Qixin Road, Longgang District, Shenzhen, Guangdong Province |
| Prepared By: | Shenzhen BCTC Testing Co., Ltd. |
| Address: | 1-2/F., Building B, Pengzhou Industrial Park, No.158, Fuyuan 1st Road, Zhancheng, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China |
| Sample Received Date: | 2024-03-14 |
| Sample Tested Date: | 2024-03-14 to 2024-03-19 |
| Issue Date: | 2024-03-25 |
| Report No.: | BCTC2403853163E |
| Test Standards: | FCC Part15.231 <br> ANSI C63.10-2013 |
| Test Results: | PASS |

The test report is effective only with both signature and specialized stamp. This result(s) shown in this report refer only to the sample(s) tested. Without written approval of Shenzhen BCTC Testing Co., Ltd, this report can't be reproduced except in full. The tested sample(s) and the sample information are provided by the client.

## 2. Test Summary

The Product has been tested according to the following specifications:

| No. | Test Parameter | Clause No. | Results |
| :---: | :---: | :---: | :---: |
| 1 | Conducted Emission | $\S 15.207$ | N/A* |
| 2 | Fundamental \&Radiated Spurious Emission <br> Measurement | $15.209,15.231 \mathrm{~b}$ | PASS |
| 3 | Occupy Bandwidth | 15.231 c | PASS |
| 4 | Dwell time | 15.231 a | PASS |
| 5 | Antenna Requirement | 15.203 | PASS |

Note*: The EUT is powered by the DC only, the test item is not applicable.

## 3. Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the Product as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the $95 \%$ confidence level using a coverage factor of $\mathrm{k}=2$.

| No. | Item | Uncertainty |
| :---: | :---: | :---: |
| 1 | 3m chamber Radiated spurious emission( $9 \mathrm{kHz}-30 \mathrm{MHz}$ ) | $\mathrm{U}=3.7 \mathrm{~dB}$ |
| 2 | 3m chamber Radiated spurious emission(30MHz-1GHz) | $\mathrm{U}=4.3 \mathrm{~dB}$ |
| 3 | 3m chamber Radiated spurious emission( $1 \mathrm{GHz}-18 \mathrm{GHz}$ ) | $\mathrm{U}=4.5 \mathrm{~dB}$ |
| 4 | 3 m chamber Radiated spurious emission(18GHz-40GHz) | $\mathrm{U}=3.34 \mathrm{~dB}$ |
| 5 | Conducted Emission(150kHz-30MHz) | $\mathrm{U}=3.20 \mathrm{~dB}$ |
| 6 | Conducted Adjacent channel power | $\mathrm{U}=1.38 \mathrm{~dB}$ |
| 7 | Conducted output power uncertainty Above 1G | $\mathrm{U}=1.576 \mathrm{~dB}$ |
| 8 | Conducted output power uncertainty below 1G | $\mathrm{U}=1.28 \mathrm{~dB}$ |
| 9 | humidity uncertainty | $\mathrm{U}=5.3 \%$ |
| 10 | Temperature uncertainty | $\mathrm{U}=0.59^{\circ} \mathrm{C}$ |

## 4. Product Information And Test Setup

### 4.1 Product Information

## Model/Type Reference: 3834972

3838002, 3838004, 3838006, 3838008, 3838009
Model Differences: All the model are the same circuit and RF module, except model names and appearance of the color.
Operation Frequency: $\quad 433.92 \mathrm{MHz}$
Type of Modulation: ASK
Number Of Channel 1CH
Antenna installation: Internal antenna
Antenna Gain: SRD: 0 dBi
Ratings: DC 3V from battery
Remark: The antenna gain of the product comes from the antenna report provided by the customer, and the test data is affected by the customer information.

### 4.2 Test Setup Configuration

See test photographs attached in EUT TEST SETUP PHOTOGRAPHS for the actual connections between Product and support equipment.

Radiated Spurious Emission:
E-1
EUT

### 4.3 Support Equipment

| Item | Shielded Type | Ferrite Core | Length | Note |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |

## Notes:

1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.

### 4.4 Channel List

| $\mathbf{C H}$ | Frequency (MHz) |
| :---: | :---: |
| 1 | 433.92 |

### 4.5 Test Mode

To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.

| Final Test Mode | Description |
| :---: | :---: |
| Mode 1 | TX |

## Note:

(1) The measurements are performed at the highest, middle, lowest available channels.
(2) Fully-charged battery is used during the test

## 5. Test Facility And Test Instrument Used

### 5.1 Test Facility

All measurement facilities used to collect the measurement data are located at Shenzhen BCTC Testing Co., Ltd. Address: 1-2/F., Building B, Pengzhou Industrial Park, No.158, Fuyuan 1st Road, Zhancheng, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China. The site and apparatus are constructed in conformance with the requirements of ANSI C63.4 and CISPR 16-1-1 other equivalent standards.
FCC Test Firm Registration Number: 712850
A2LA certificate registration number is: CN1212
ISED Registered No.: 23583
ISED CAB identifier: CN0017

### 5.2 Test Instrument Used

## 6. Conducted Emissions

### 6.1 Block Diagram Of Test Setup

6.2 Limit

| Frequency (MHz) | Limit (dBuV) |  |
| :--- | :---: | :---: |
|  | Quas-peak | Average |
| $0.15-0.5$ | $66-56^{*}$ | $56-46^{*}$ |
| $0.50-5.0$ | 56.00 | 46.00 |
| $5.0-30.0$ | 60.00 | 50.00 |

### 6.3 Test Procedure

a. The Product was placed on a nonconductive table 0.8 m above the horizontal ground reference plane, and 0.4 m from the vertical ground reference plane, and connected to the main through Line lmpedance Stability Network (L.I.S.N).
b. The RBW of the receiver was set at 9 kHz in $150 \mathrm{kHz} \sim 30 \mathrm{MHz}$ with Peak and AVG detector in Max Hold mode. Run the receiver's pre-scan to record the maximum disturbance generated from Product in all power lines in the full band.
c. For each frequency whose maximum record was higher or close to limit, measure its QP and AVG values and record.

### 6.4 EUT Operating Conditions

The EUT was configured for testing in a typical fashion (as a customer would normally use ti) The EUT has been programmed to continuously transmit during test. This operating condition was tested and used to collect the included data.

### 6.5 Test Result

The EUT is powered by the DC only, the test item is not applicable.

## 7. Radiated Emissions

### 7.1 Block Diagram Of Test Setup

(A) Radiated Emission Test-Up Frequency Below 30MHz

(B) Radiated Emission Test-Up Frequency $30 \mathrm{MHz} \sim 1 \mathrm{GHz}$

(C) Radiated Emission Test-Up Frequency Above 1GHz

### 7.2 Limit

20 dBc in any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Frequency | Field Strength | Distance | Field Strength Limit at 3m Distance |  |
| :---: | :---: | :---: | :---: | :---: |
| (MHz) | uV/m | (m) | uV/m | dBuV/m |
| $0.009 \sim 0.490$ | 2400/F(kHz) | 300 | 10000* 2400/F(kHz) | 20log ${ }^{(2400)-(k H z)]}+80$ |
| $0.490 \sim 1.705$ | 24000/F(kHz) | 30 | 100* $24000 / \mathrm{F}(\mathrm{kHz})$ | $2010{ }^{(240007-(k H z)}+40$ |
| $1.705 \sim 30$ | 30 | 30 | 100*30 | $20 \log ^{(30)}+40$ |
| $30 \sim 88$ | 100 | 3 | 100 | $2010{ }^{(100)}$ |
| 88 ~ 216 | 150 | 3 | 150 | $20 \mathrm{log}^{(150)}$ |
| 216 ~ 960 | 200 | 3 | 200 | $2010{ }^{(200)}$ |
| Above 960 | 500 | 3 | 500 | $20 \mathrm{log}^{(500)}$ |

Field Strength of Fundamental Limit:

| Fundamental and harmonics <br> emission <br> limits Frequency(MHz) | Field strength of Fundamental <br> $($ (microvolts/meter) | Field strength of spurious <br> Emissions <br> (microvolts/meter) |
| :---: | :---: | :---: |
| $40.66-40.70$ | 2250 | 225 |
| $70-130$ | 1250 | 125 |
| $130-174$ | 1250 to $3750^{* *}$ | 125 to $375^{* *}$ |
| $174-260$ | 3750 | 375 |
| $260-470$ | 3750 to $12500^{* *}$ | 375 to $1250 *$ |
| Above 470 | 12500 | 1250 |

## ** linear interpolations

[Where F is the frequency in MHz , the formulas for calculating the maximum permitted fundamental field strengths are as follows: for the band $130-174 \mathrm{MHz}, \mu \mathrm{V} / \mathrm{m}$ at 3 meters $=56.81818(\mathrm{~F})-6136.3636$; for the band $260-470 \mathrm{MHz}, \mu \mathrm{V} / \mathrm{m}$ at 3 meters $=41.6667(\mathrm{~F})-7083.3333$. The maximum permitted unwanted emission level is 20 dB below the maximum permitted fundamental level.]

| Frequency (MHz) | Limit (dBuV/m) (at 3M) |  |
| :---: | :---: | :---: |
|  | Peak | Average |
| 433.92 | 100.8 | 80.8 |

Limits Of Radiated Emission Measurement (Above 1000mhz)

| Frequency (MHz) | Limit (dBuV/m) (at 3M) |  |
| :---: | :---: | :---: |
|  | Peak | Average |
| Above 1000 | 74 | 54 |

Notes:
(1)The limit for radiated test was performed according to FCC PART 15C.
(2)The tighter limit applies at the band edges.
(3) Emission level $(\mathrm{dBuV} / \mathrm{m})=20 \log$ Emission level $(\mathrm{uV} / \mathrm{m})$.

Frequency Range Of Radiated Measurement (For unintentional radiators)

### 7.3 Test Procedure

| Receiver Parameter | Setting |
| :---: | :---: |
| Attenuation | Auto |
| $9 \mathrm{kHz} \sim 150 \mathrm{kHz}$ | RBW 200Hz for QP |
| $150 \mathrm{kHz} \sim 30 \mathrm{MHz}$ | RBW 9kHz for QP |
| $30 \mathrm{MHz} \sim 1000 \mathrm{MHz}$ | RBW 120kHz for QP |

| Spectrum Parameter | Setting |
| :---: | :---: |
| $1-6 \mathrm{GHz}$ | RBW $1 \mathrm{MHz} / \mathrm{VBW} 1 \mathrm{MHz} \mathrm{for} \mathrm{Peak}$, |
| RBW $1 \mathrm{MHz} / \mathrm{VBW} 10 \mathrm{~Hz}$ for Average |  |

Below 1GHz test procedure as below:
a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30 MHz , the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
f. If the emission level of the EUT in peak mode was 10 dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10 dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.
Above 1 GHz test procedure as below:
g. Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 metre to 1.5 metre( Above 18 GHz the distance is 1 meter and table is 1.5 metre).
h. Test the EUT in the lowest channel, the middle channel ,the Highest channel.

Note:
Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis. The worst case emissions were reported.

Above 1 GHz test procedure as below:
a. The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.
e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
f. If the emission level of the EUT in peak mode was 10 dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10 dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.
g. Test the EUT in the lowest channel, the Highest channel.

Note: Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis. The worst case emissions were reported.

### 7.4 EUT Operating Conditions

The EUT was configured for testing in a typical fashion (as a customer would normally use it) The EUT has been programmed to continuously transmit during test. This operating condition was tested and used to collect the included data.

### 7.5 Test Result

Below 30MHz

| Temperature: | $26^{\circ} \mathrm{C}$ | Relative Humidity: | $24 \%$ |
| :--- | :--- | :--- | :--- |
| Pressure: | 101 kPa | Test Voltage: | DC 3V |
| Test Mode: | Mode 1 |  |  |

| Freq. | Reading | Limit | Margin | State |
| :---: | :---: | :---: | :---: | :---: |
| $(\mathrm{MHz})$ | $(\mathrm{dBuV} / \mathrm{m})$ | $(\mathrm{dBuV} / \mathrm{m})$ | $(\mathrm{dB})$ | P/F |
| -- | -- | -- | -- | PASS |
| -- | -- | -- | -- | PASS |

## Note:

The amplitude of spurious emissions which are attenuated by more than 20 dB below the permissible value has no need to be reported.
Distance extrapolation factor $=40 \log$ (specific distance/test distance)(dB);
Limit line $=$ specific limits(dBuv) + distance extrapolation factor.

Between 30 MHz - 1 GHz

Notes: 1.Average emission Level $=$ Peak Level + Duty cycle factor
2. Duty cycle level please see clause 9 .
3. Pulse Desensitization Correction Factor

Pulse Width (PW) $=27.9 \mathrm{~ms}$
RBW $=1 \mathrm{MHz}$
PW(27.9ms) > 1/RBW (1us)
Therefore PDCF is not needed
4.Other harmonics emissions are lower than 20 dB below the allowable limit.

## 8. Bandwidth Test

### 8.1 Block Diagram Of Test Setup

### 8.2 Limit

According to FCC 15.231 (c) requirement:
The bandwidth of the emission shall be no wider than $0.25 \%$ of the center frequency for devices operating between 70 MHz to 900 MHz . Those devices operating above 900 MHz , the emission spurious shall be no wider than $0.5 \%$ of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.
B.W ( 20 dBc ) Limit $=0.25 \%$ * $f(\mathrm{MHz})=0.25 \%$ * $433.79 \mathrm{MHz}=1.0845 \mathrm{MHz}$

| Spectrum Parameter | Setting |
| :---: | :---: |
| Attenuation | Auto |
| Span Frequency | $>$ Measurement Bandwidth or Channel Separation |
| RB | $1 \%$ to $5 \%$ of the OBW |
| VB | $\geq$ RBW |
| Detector | Peak |
| Trace | Max Hold |
| Sweep Time | Auto |

### 8.3 Test Procedure

a. The EUT was directly connected to the spectrum analyzer and antenna output port as show in the block diagram below,
b. Spectrum Setting : RBW $=1 \%$ to $5 \%$ of the $\mathrm{OBW}, \mathrm{VBW} \geq$ RBW, Sweep time $=$ Auto.

### 8.4 EUT Operating Conditions

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

### 8.5 Test Result

| Temperature: | $26{ }^{\circ} \mathrm{C}$ | Relative Humidity: | $54 \%$ |
| :--- | :--- | :--- | :--- |
| Pressure: | 101 kPa | Test Voltage: | DC 3 V |
| Test Mode: | Mode 1 |  |  |

| Frequency | 20dB Bandwidth <br> $(\mathbf{k H z})$ | Limit <br> $(\mathbf{M H z})$ | Result |
| :---: | :---: | :---: | :---: |
| 433.92 MHz | 7.127 | 1.0845 | PASS |

## 9. Calculation Of Average Factor

The output field strengths of specification in accordance with the FCC rules specify measurements with an average detector. During the test, a spectrum analyzer incorporating a peak detector was used. Therefore, a reduction factor can be applied to the resultant peak signal level and compared to the limit for measurement instrumentation incorporating an average detector.
The duty cycle is measured in 100 ms or the repetition cycle period, whichever is a shorter time frame. The duty cycle is measured by placing the spectrum analyzer to set zero span at 100 kHz resolution bandwidth. Averaging factor in $\mathrm{dB}=20 \log$ (duty cycle)

The duration of one cycle $=27.9 \mathrm{~ms}$
The duty cycle is simply the on-time divided the duration of one cycle
Duty Cycle $=\left(1.044^{*} 8+0.345^{*} 9\right) / 27.9 \mathrm{~ms}$
$=0.411$
Therefore, the averaging factor is found by $20 \log 0.411=-7.72 \mathrm{~dB}$
Test plot as follows:
Note: During the 100 ms , the amount of pulse and on-time of pulse are the same for every pulse train.

Report No.: BCTC2403853163E

## Cycle

On-time

## 10. Dwell Time

### 10.1 Block Diagram Of Test Setup

### 10.2 Limit

According to FCC 15.231(a) requirement:
A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

### 10.3 Test Procedure

a) Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
b) Position the EUT without connection to measurement instrument. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range, and make sure the instrument is operated in its linear range.
c) Set RBW to 100 kHz and VBW of spectrum analyzer to 300 kHz with a convenient frequency span including 100 kHz bandwidth from band edge.
d) Measure the highest amplitude appearing on spectral display and set it as a reference level. Plot the graph with marking the highest point and edge frequency.
e) Repeat above procedures until all measured frequencies were complete.
10.4 Test Result

| Dwell time | Limit (second) | Result |
| :---: | :---: | :---: |
| 280 ms | $<5 \mathrm{~s}$ | Pass |

## 11. Antenna Requirement

### 11.1 Standard Requirement

15.203 requirement: For intentional device, according to 15.203: an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

### 11.2 EUT Antenna

The EUT antenna is the permanent welding Internal antenna. It comply with the standard requirement.

## STATEMENT

1. The equipment lists are traceable to the national reference standards.
2. The test report can not be partially copied unless prior written approval is issued from our lab.
3. The test report is invalid without the "special seal for inspection and testing".
4. The test report is invalid without the signature of the approver.
5. The test process and test result is only related to the Unit Under Test.
6. Sample information is provided by the client and the laboratory is not responsible for its authenticity.
7. The quality system of our laboratory is in accordance with ISO/IEC17025.
8. If there is any objection to this test report, the client should inform issuing laboratory within 15 days from the date of receiving test report.
