

Main test model: SST1120JA-P	illustrate	Their electrical circuit design, layout, components and internal wiring are identical, only the memory size inside the chip are different.	
SST1120JA-P	IC internal structure, flash memory is the same, silk screen printing is different. With shielding cover		
SST1100JA-P	The IC internal structure is the same, flash memory 32K. With shielding cover		
SST1230JA-P	The IC internal structure is the same, flash memory 16K. With shielding cover
