**Re: AutoElite Console: FCC Cover Letter**

The AutoElite thrombectomy console is a mobile medical device used in professional healthcare settings. The console generates the energy and motion required by various types of thrombectomy Set (Catheter, pump, waste tubing/collection bag) single-use disposables (SUDs). Each SUD has its parameters saved to an RFID tag, which is read by the console using a 13.56 MHz RFID/NFC reader and NFC antenna.

This is a new product and requires an original FCC certification. The FCC ID of this product is 2BCX3M001AJAEC.

The FCC rules applicable to this product include FCC CFR Title 47, 15.225.

Szymon Rzeszowski, Principal Electrical Engineer

Signature

A handwritten signature in blue ink, appearing to read "Szymon Rzeszowski".
