

# FCC RF Exposure

EUT Description: RC Cartoon Cars

Model No.: JB-008

FCC ID: **2BDWF-JB-008**

## 1. Limits

According to KDB 447498 D01 General RF Exposure Guidance v06 The 1 - g and 10 - g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq 50$  mm are determined by:  
[[max power of channel, including tune - up tolerance, mW]/(min. test separation distance, mm)]  $\cdot [\sqrt{f(\text{GHz})}] \leq 3.0$  for 1 - g SAR and  $\leq 7.5$  for 10 - g extremity SAR,

Where:

Result= $P/D \cdot \sqrt{F}$

F= the RF channel transmit frequency in GHz

P=Maximum turn - up power in mw

D=Min. test separation distance in mm

## 2. Test Result of RF Exposure Evaluation

EIRP(dBm)= 51.88 (dBuV/m)-95.2= -43.32dBm)

Frequency (MHz)	Output power (dBm)	Tune Up Power (dBm)	Max Tune Up power (dBm/Mw)	Min test separation distance (mm)	Result	Limit (mW/cm <sup>2</sup> )	SAR Test Exclusion
27.159	-43.32	-44 $\pm$ 1	-43/0.00005	5	0.000002	3.0	Pass
Note: PK Output power= conducted power. Conducted power see the test report <b>HK2310204893-E</b> , antenna gain= -0.58dBi							

Per KDB 447498 D01, when the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine RF Exposure test exclusion. The test exclusion threshold is 0.000002 which is  $\leq 3$ , RF Exposure testing is not required.

Note: Exclusion Thresholds Results= $[(\text{max. power of channel, including tune-up tolerance, mW})/(\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}]$

$f(\text{GHz})$  is the RF channel transmit frequency in GHz

Distance=5mm
