

EYES DASH CAMERA

USER MANUAL

Important Notice

Please read this manual carefully before using the product and keep it properly.

Thank you for choosing AKEEYO EYES dash cam. If this is your first dash cam, you've made the right choice in protecting yourself and your family.

1. Please do not disassemble or modify this product by yourself. For internal inspection or repair, please contact the customer service team.
2. If any foreign matter gets inside the product, please unplug the car charging cable immediately and contact the customer service team for repair.
3. If the power cable emits smoke or an abnormal smell, please unplug the car charging cable immediately and contact the customer service team for repair.
4. Do not use damaged or modified power cable, only use original power cable.
5. Do not adjust this product while driving. Please park your car in a safe place before installing and setting up the product.
6. Make sure the camera lens is clean and there is nothing blocking the lens.
7. Do not use this product in environments where the temperature exceeds 140°F or falls below -50°F.
8. When cleaning the interior of your car, do not spray water or wax directly on the product.
9. Please use a soft damp cloth to clean the lens to avoid scratches on the lens and damage to the video quality.
10. Please use this product only within the scope permitted by law.

EYES Power Tools

It's best to use the power cable that comes with the product, or our professional hardwire kit.

Hardwire Kit (Required for Parking Mode, not included, purchased separately.)

Install Your EYES

We have prepared an installation video of EYES dash cam. You can scan the QR code below to watch it. Whether you are a novice user or an experienced user, this video will provide helpful tips so that you can complete the installation quickly and correctly.

Start the vehicle generator and perform a test before officially installing the dash camera: connect the dashcam to the power supply, connect the rear camera, insert the TF card, and ensure that the dash cam can work normally.

Install Your EYES

Install Front Camera

1. Install Electrostatic Stickers

Clean the windshield and apply the electrostatic sticker to the recommended area as shown in the picture. Choose a flat and smooth area to install, making sure to remove any air bubbles between the sticker and the glass.

2. Install Memory Card

Insert the memory card into the card slot with the contacts facing up until you hear a click and the memory card is well installed.

3. Install Dash Cam

Peel off the protective film on the sticker at the bottom of the bracket, stick the dashcam to the electrostatic sticker in the dotted area, and adjust the angle to get the best view of the road.

4. Connect Power

As shown in the picture, connect the dash cam to the power supply, and use a crowbar to hide the power cable to avoid obstructing the driver's view and causing danger. The EYES dash camera will automatically turn on after connecting to the power supply.

Install Your EYES

Install Rear Camera

Note: This rear camera is a dedicated rear camera in the car. It has better effect when installed in the car and is not waterproof. We recommend that you install it on the rear windshield of your car.

Position 1: Install the rear camera on the rear windshield.

Position 2: Install the rear camera near the license plate.

It is highly recommended to use position 2. The rear view and reversing images are sharp and clear. To use the reversing function, please install the rear camera in this position.

Setting Up Your Camera

Insert the TF card and connect the power supply, the dash cam will automatically turn on. Then select the language, set the date and time zone, and you can start using your EYES dash cam.

The following are multiple display modes of the LCD screen. You can swipe the screen right to switch to your favorite mode. The mode you set will be remembered when you turn it off and then on again.

ADAS & BSD Trigger Conditions

ADAS

Automatic calibration occurs when the vehicle is traveling over 20 mph and has clear lane markings. It takes about 2 minutes for calibration to complete. Calibration happens automatically every time the device is turned on, and if unsuccessful on the second attempt, the previous calibration result is used.

Style	Minimum warning speed (km/h)		sensitivity	Sensitivity Settings		
	default value	Adjustable range		High	Medium	Low
Lane Departure	>60	Switchable	Low/ Medium/ HighDefault Medium	1.Outside wheel to lane line distance: $\leq 0.15\text{m}$ 2.Lane change cooling time: 0.7s	1.Outside wheel to lane line distance: $\leq 0\text{m}$ 2.Lane change cooling time: 1s	1.Outside wheel to lane line distance: $\leq -0.15\text{m}$ 2.Lane change cooling time: 1.5s

About Installation

Rear Camera Mounting Position

If there is a heating wire on the rear glass, please do not stick the double-sided tape on the heating wire, Otherwise, the heating wire may be damaged when the double-sided tape is removed

- In order for the blind spot detection system to detect correctly, it is recommended that the rear camera be installed above the rear glass in the center of the vehicle.
- if attached to the rear window, remove the film from the top. Otherwise, once applied, the film may come off on impact.

About Blind Spot Detection(BSD)

Blind Spot Detection

When driving (parking: BSD Enable setting is turned on) and detects a hidden vehicle in the left/right rear blind spot of the vehicle, the driving recorder will prompt the driver with a red warning bar and a warning sound.

Note: Objects other than cars cannot be detected. (people, bicycles, motors, etc.)

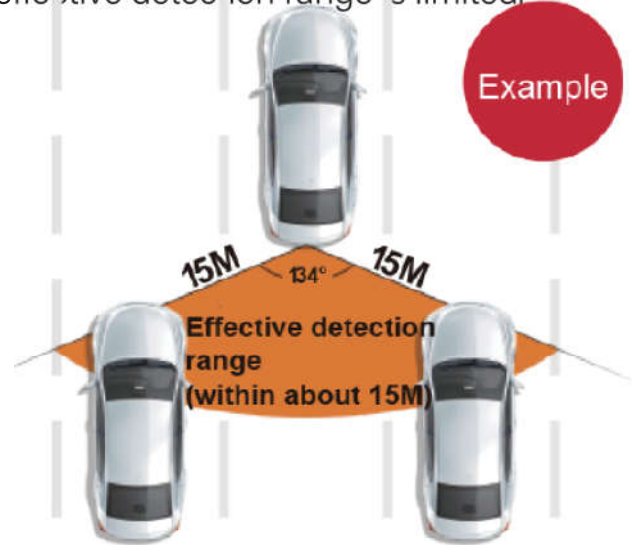

After the BSD function is set to "ON", if there is another vehicle (example) within the left/right rear detection range, red warning bars will flash on the left and right sides of the LCD screen. A "beep" sound will be heard.

※ The [●] icon will only be displayed when the rear camera is displayed in full screen on the LCD screen.

※ If the vehicle is continuously overtaken within 15m from the left/right side, the red warning bars on the left and right sides of the LCD screen will flash continuously and a "beep" sound will be heard.

※ According to conditions such as road conditions (sharp bends, steep slopes, etc.), weather conditions (rain, snow, fog, etc.), obstacle shapes (low, small, thin, etc.), the effective detection range is limited.

※ Recommended Rear Camera Mounting Locations

① Top Center of the License Plate

1. Install the rear camera bracket.
2. Fix the camera on the top center of the license plate with the set screw in the accessories.

② Car Rear Glass

1. Install the rear camera bracket
2. In order for the BSD function to be detected correctly, it is recommended to install the rear camera in the center above the rear glass.

Connect to AKEEYO APP

Download APP

① Scan the QR code below to download the "AKEEYO" APP

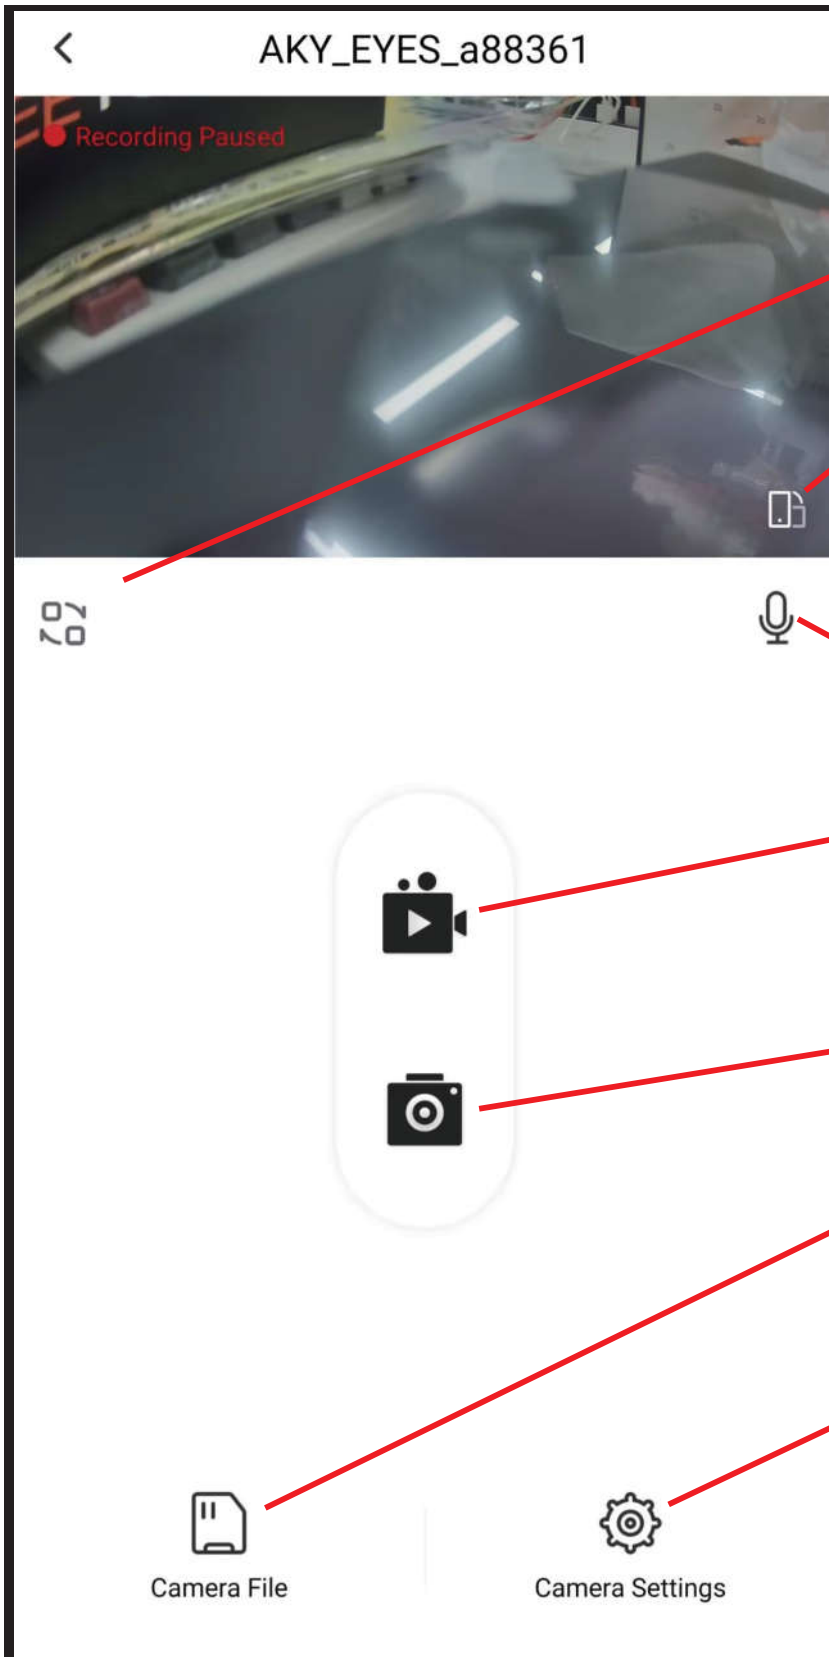

② Download from Apple App Store or Google Play Store

Connect the camera WiFi

① Open the main interface of AKEEYO app, click "Add Camera" and connect to WiFi (name AKY-EYES-*****

FAQ

Q:WIFI CONNECTION GOES WRONNG

A:Connection Prepare

>Mobile data/GPS is on

>16 ftless close to your AKEEYO EYES

>Only allowed 1 device connection

Connection Notice

>WiFi password: 12345678

> Connect only this time or Always connect

Q:Won't enter Parking Mode

A:Hardwire kit needed(Sold Separately.)

Q:Over Heat

A:Camera should stay between -4°F- 158F

Q:RECEIVED DEAD CAMERA ?

A:Use USB cable to connect your camera with computer and check the screen turn on

> If not, please unplug MicroSD card and use a pin and press the Reset button at the botom of camera;

Reconnect your camera and power on.

FAQ

Q:ULTIMATE SOLUTION

A: Make sure you are using the original car charger that comes with the package. If not, please replace.

> Remove the rear camera, MicroSD card, and GPS holder, and then put them back into the dash cam in sequence.

Check whether the short circuit of the accessories causes the dash cam to fail to work normally.

> Check your Micro card is U3 Class10, if not, please change to one that is U3 Class10.

>If not, please use your personal USB charge and check again.Check if the car charger is short-circuited and the dash cam cannot work normally.

> Please contact us download our latest firmware to upgrade.

**If the methods above don't solve your problem,
feel free to contact us**

About AKEEYO

WWW.AKEEYO.COM

AKEEYO was established in Tokyo, Japan in 2019 with in-house research and production teams. It focuses on technological innovation in the fields of IoT sensing, artificial intelligence and big data, and has complete system design and service guarantee. In the market, AKEEYO's dash cam have a good reputation and sales, and are one of the recommended choices.

From design, construction to supply of dash cam, AKEEYO is committed to comprehensively improving users' driving experience and ultimately providing users with customized and intelligent driving methods. In the era of the Internet of Things, AKEEYO, a brand for smart driving, will bring more and better driving experiences to global users.

FCC Warning:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.
