# **RF Exposure Evaluation Report**

#### **1 RF EXPOSURE**

Product Name: Bluetooth headset

Model No.: DR-58

FCC ID: 2BEIA-DR-58

## 2. RF Exposure Evaluation

FCC KDB447498 D01 General RF Exposure Guidance v06: Mobile and Portable Device, RF Exposure, Equipment Authorization Procedures.

FCC CFR 47 part1 1.1310: Radiofrequency radiation exposure limits.

FCC CFR 47 part2 2.1091: Radiofrequency radiation exposure evaluation: mobile devices.

### 2.1 LIMITS

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq$  50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] \*[ $\sqrt{f(GHz)}$ ]  $\leq 3.0$  for 1-g SAR and  $\leq 7.5$  for 10-g extremity SAR, where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

## 2.2 EUT RF EXPOSURE EVALUATION

Worst Mode: 2-DH5						
Channel (MHz)	Conducted	Tune up	Maximum tune-up Power		Calculated value	Limit
	Power	Tolerance				
	(dBm)	(dBm)	(dBm)	(mW)	value	
2402MHz	-1.63	-1±1	0	1.259	0.390	3.0

Calculated value is 0.390 < 3.0, So there is no require SAR test.
