Solder Board-Component View 3	 A photograph of two blue printed circuit boards (PCBs) placed on a blue textured surface next to a black ruler with white markings. The ruler shows measurements in millimeters (0 to 100 mm) and centimeters (0 to 10 cm). The PCB on the left is larger and more complex, featuring various electronic components like capacitors, resistors, and integrated circuits. The PCB on the right is smaller and simpler, with a few components and a large square component in the center.
Solder Board-Component View 4	 A photograph of a single blue printed circuit board (PCB) placed on a blue textured surface next to a black ruler with white markings. The ruler shows measurements in millimeters (0 to 100 mm) and centimeters (0 to 10 cm). The PCB is rectangular with rounded corners and features various electronic components, including a large square component in the center, a circular component on the left, and several smaller components and connectors.

Solder Board-Component View 5	 A photograph of a blue printed circuit board (PCB) component, labeled 'View 5'. The component is rectangular with rounded corners and features various electronic components, including a large integrated circuit (IC) in the center, several smaller ICs, resistors, and capacitors. It is positioned next to a black ruler with white markings, showing dimensions in millimeters. The ruler indicates the component is approximately 80 mm wide and 40 mm high.
Solder Board-Component View 6	 A photograph of the same blue PCB component, labeled 'View 6'. This view shows the underside of the component, revealing a large central IC, a smaller IC, and various passive components like resistors and capacitors. A circular component, possibly a battery or a large capacitor, is visible on the left side. The component is placed next to a black ruler with white markings, showing dimensions in millimeters. The ruler indicates the component is approximately 80 mm wide and 40 mm high.

Solder Board-Component View 11	 A circular blue printed circuit board (PCB) populated with various electronic components, including integrated circuits, capacitors, and resistors. The board is positioned next to a black ruler with white markings in millimeters. The ruler shows measurements from 0 to 100 mm. The background is a light blue textured surface.
Solder Board-Component View 12	 A rectangular blue printed circuit board (PCB) populated with electronic components, including integrated circuits and capacitors. The board is positioned next to a black ruler with white markings in millimeters. The ruler shows measurements from 0 to 100 mm. The background is a light blue textured surface.

Solder Board-Component View 13	 A photograph of a small, rectangular blue printed circuit board (PCB) component. The component is positioned on a black surface with a white ruler for scale. The ruler shows measurements in millimeters, with the component's length spanning approximately 10 mm. The component has several gold-colored pins along one edge and various surface components, including a small integrated circuit and several resistors. The background is a light blue textured surface.
Solder Board-Component View 14	 A photograph of a circular blue printed circuit board (PCB) component. The component is positioned on a black surface with a white ruler for scale. The ruler shows measurements in millimeters, with the component's diameter spanning approximately 20 mm. The component is densely packed with various electronic components, including a large black integrated circuit, several capacitors, and resistors. Red and blue wires are soldered to the component. The background is a light blue textured surface.
