## 1. Summary:

This report to account for the measurement setup and result of the Antenna. The measurement setup includes s-parameter, The measured data for Antenna are presented and analysis.

## 2. S-Parameter Measurement S:

A. Reflection coefficient :

- (a) Instrument: Network Analyzer
- (b) Setup:
  - (1) Calibrate the Network Analyzer by one port calibration using O.S.L. calibration kits.
  - (2) Connect the antenna under test to the Network Analyzer.
  - (3) Measure the S11(reflection coefficient) shown in Fig. 1.
- (4) Generally, the S11 is less than -10dB to ensure the 90% VSWR 2.0:1 power into antenna and only less than 10% power back to system.
