# **Antenna Test Report**

1

Test Unit: Shenzhen Aihui Technology Co. , Ltd.			
Materials	Coaxial line+Copper pipes		
Antenna form	PIFA	Polarization mode	Linear
Application scenario	433Mhz		
Working band	433Mhz	VSWR	≤2

Power	Max: 2W	Impedance	50Ω
dBi	2		
Test Equipment	HPE5071C、Shielding Room、3D automatic turntable

## 1.Project Image

The final verification antenna performance prototype in our company for at least one year, easy to analyze and solve the problem of antenna mass production, to ensure the quality of antenna shipment

## 2.Test Fixture

Objective: to test the passive parameters of antenna as accurately as possible. Making Method: the handset is made of a 50 ohm coaxial cable, one end of which is connected to the test point of the back end of the matching circuit of the handset motherboard (front end of the RF test hole), and the other end is connected to the SMA joint. The diagram is as follows:

### 3、Antenna matching circuit

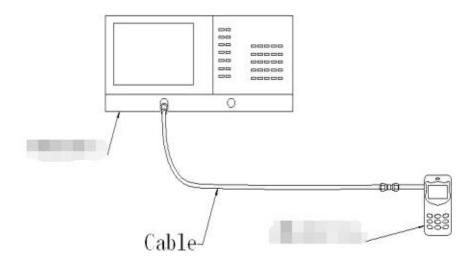

Modify

E01	E02	E03
No	Νο	No

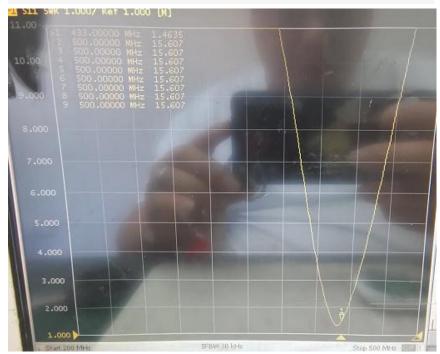

#### Note: The match is unmodified.

#### 4.S11 test

**4.0** 4.0s11 test method description of test equipment: Network Analyzer (E5071C) test method: a 50 ohm CABLE is used to export from the instrument test port. The SMA connector for connecting the handset is calibrated using a calibration piece, record the echo loss and standing wave ratio corresponding to the relevant frequency points. The test schematic is as follows:

# 5.Darkroom test equipment and data

# 6.Test Equipment Test system: shielded darkroom The temperature was 22 ° C ± 3 ° C and the humidity was 50% ± 15%

Test equipment: when testing passive data, use the Network analyzer AGILENTE5071C to test active data, use the omnibus CMW500

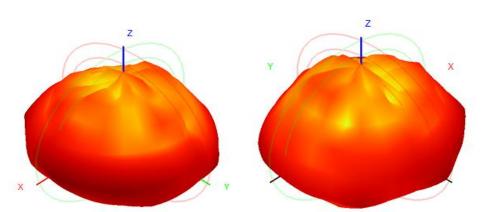

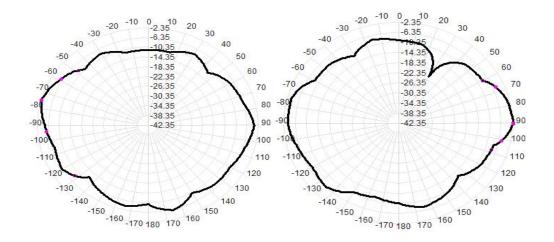

nce and Shenzhen

#### 7.Active antenna test data

WIFI Test Data:			
<b>433Mhz</b> : 433			
Frequency (MHZ)	Efficiency (%)	Gain (dbi)	
430	29.58	-1.51	
431	29.36	-1.30	
432	30.11	-1.65	
433	32.25	-1.74	
434	34.25	-1.88	
435	31.65	-1.98	
436	30.11	-1.55	
437	29.60	-1.98	
438	28.47	-2.05	

433Mhz

6.The panel matches the change schematic

# / 7.Antenna environment handling /

The original environment, we do not do processing

8.Antenna mass production index

When the antenna is mass-produced, the standing wave ratio is taken as the mass-produced test standard. Based on the differences of the project itself, the

following criteria are given:

Frequency	Standard for volume production
433Mhz	VSWR (Mass Production performance) & LT; VSWR(recognition performance) 0.5

# 9.Structural drawings
