Catalogue

1. Antenna part number

2. Test Fixture

3. Matching circuit

4. S11 test

4.1 Test method description of S11

4.2 Return Loss

5. Data of OTA

5.1 Test equipment

5.2 Passive test data

5.3 Peak antenna gain

5.4 Antenna pattern

6. Antenna drawing

1. Antenna part number

Antenna name	Type Of Antenna	Antenna part number
T2S-WIFI1	FPC+cable	
T2S-WIFI2	FPC+cable	

2. Test Fixture

Destination: To test the passive parameters of antenna as accurately as possible.

Method: With the 50 ohm coaxial cable, one end is connected to the test point of the matching circuit back end of the motherboard to be tested (RF test hole front end), and the other end is connected to the SMA connector. The diagram is as follows:

3. Matching circuit

The antennas default to existing on-board matching circuits.

4.S11 test

4.1 Test method description of S11

Test Equipment: Network Analyzer (HP 5071E)

Test method: A 50 ohm CABLE is exported from the instrument test port, and the SMA connector of the test device is connected after calibration with the calibration piece. The return loss and standing wave ratio corresponding to the relevant frequency points are recorded.

The test diagram is as follows:

4.2 Return Loss

ANT1

ANT2

5. Data Of OTA

5.1 Test Equipment

Test system: microwave chamber

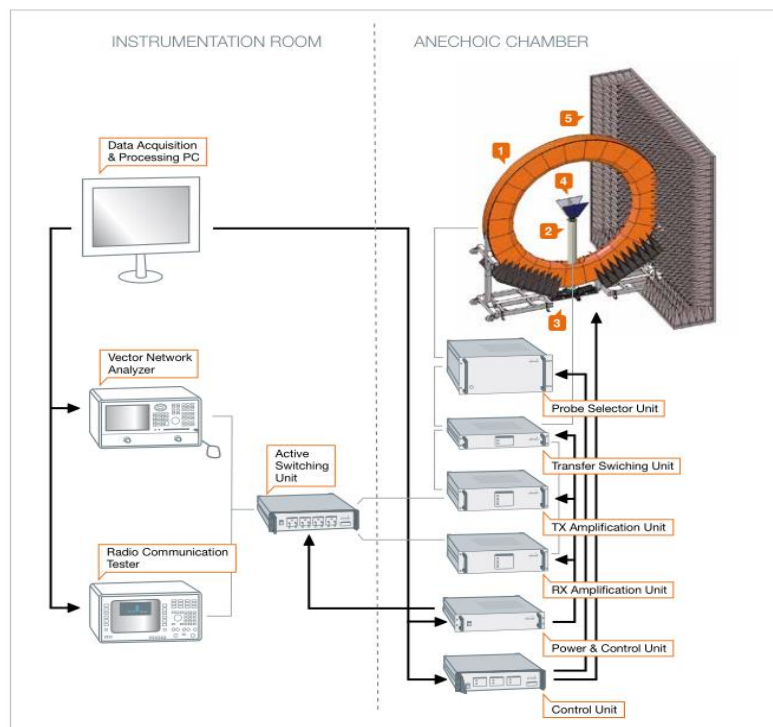

Test environment: Temperature $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$, humidity $50\% \pm 15\%$

Test equipment: Agilent E5071C is used for passive data testing and Amway 8820C instrument is used for OTA testing.

test equipment

SATIMO SG24

- Antenna Measurement
- OTA Testing
- CTIA Certifiable Measurement
- Linear Array Antenna Measurement

Note: The experimental equipment used for testing is owned by the company, not the third-party certification laboratory, and the test data is for reference only.

5.2 Passive test data

ANT1			
频率 (MHz)	效率 (dB)	Gain (dBi)	效率 (%)
