

Upgrade version from RSS-133 Issue 5 to RSS-133 Issue 6.
RSS-133 update, the test item that affects our product is Unwanted emission, and the updated limit value is as follows.

Table 3: Unwanted emission limits for all equipment

Offset frequency from the edge of the frequency block group (MHz)	Unwanted emission limit
≤ 1	-13 dBm/(1% of OBW)
> 1	-13 dBm/MHz

After reviewing, according to the RSS-133 Issue 6 limit calculation method in the original report, the calculated limit value was also -13dBm, so it has no impact on the test results.
