Turn off the switch for 30 seconds, flash the light source or take a breath, and then automatically turn off after 30 seconds. At this time, if you need to cancel the countdown, touch the switch again. For some models, long press the "30S" to open the key for 2 seconds, and enter the small night light mode.

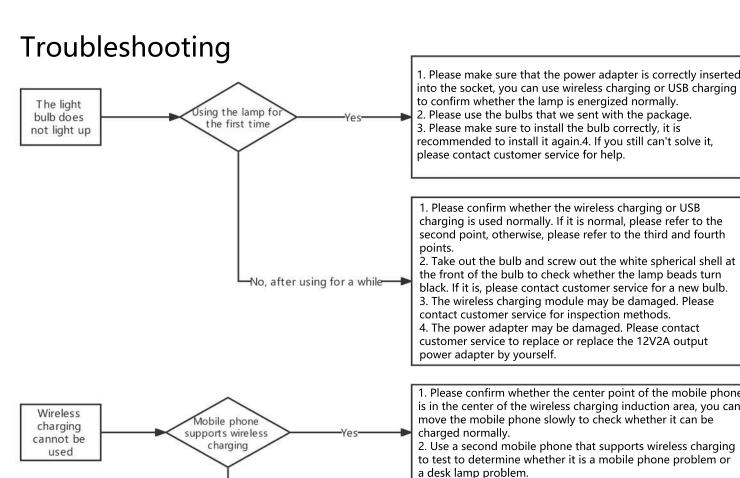

Wireless charging and sensing area. If your phone supports QI wireless charging, you can align the phone center with the wireless charging area center and automatically charge after a few seconds. During the charging process, the area and the heat behind the phone is a normal charging phenomenon.

USB output. Through this interface, small electronic devices can be charged. The maximum output is 5V2A.

This function can only be used with mobile phones with wireless charging. Otherwise, please purchase a wireless charging

eceiver suitable for your mobile phone.

1. Make sure that the phone case is free of metal.
2. The center point of the mobile phone should be aligned with the center point of the wireless charging symbol as far as possible. At this time, the contact surface is large and the charging effect is good.
3. There is power matching in wireless charging. Some mobile phones only support 5W slow charging, which will slow the charging speed. Determine the wireless charging power supported by the phone.
4. The ambient temperature is too high, for example, in summer, when the temperature is high in the charging process, the temperature protection of wireless charging may be triggered. At this point, it will stop charging, wait for the temperature to decrease, and automatically recharge.

# **FCC Statement**

This device complies with part 15 of the FCC Rules. Operation is Subject To the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not explicitly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Note: this equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- · Reorient or relocate the receiving antenna.
- · Increase the separation between the equipment and receiver.
- · Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- · Consult the dealer or an experienced radio/TV technician for help.

The equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. During the operation of device a distance of 15 cm surrounding the device and 20 cm above the top surface of the device must be respected.
