

Antenna Information for FCC ID A24-GG32918

The GreenGoose Sensor, FCC ID A24-GG32918, uses a printed monopole antenna, which has been arranged in a meander pattern in order to fit within the constrained form-factor. By design, the gain is less than 2 dBi, and the antenna is permanently attached to the radio circuitry and not accessible to the user. A photograph of the antenna is included below.
