EMISSION TEST REPORT

Test Report No.: 18J0022-02 ALPINE ELECTRONICS, INC. Model: NRC301 FCC Part 15 Subpart C

1. This test report shall not be reproduced except in full, without the written approval of A-Pex International Co., Ltd.						
2. This test report does not constitute an endorsement by NIST/NVLAP or U.S. Government.						
3. This equipment is in compliance with above regulation. We hereby certify that the data are contain a true representation of the emission profile.						
4. The results in this report apply only to the sample tested.						
5. This test report clearly shows that EUT, NRC301 Remote Control Security System is in compliance with FCC Part 15 Subpart C						
Date of test: October 29, 1998 Issued date: November 6, 1998						
Tested by: Approved by:						
Osamu Watatani Tetsuya Hashimoto						
Engineer, EMC Dept. Group Leader of EMC section						
Form Version No. 1

1 GENERAL INFORMATION

APPLICANT : ALPINE ELECTRONICS, INC.

REGULATION(S) : FCC Part 15 Subpart C

MODEL NUMBER : NRC301

SERIAL NUMBER :-

KIND OF EQUIPMENT : Remote Control Security System

(Transmitter)

TESTED DATE : October 29, 1998

REPORT FILE NUMBER : 18J0022-02

TEST SITE : A-PEX Yokowa NO.3 Open Test Site

Testing Laboratory

A-pex International Co., Ltd.Telephone: +81 596 39 1485

FCC ID : A269ZUA125 Our reference : 18J0022-02 Page : 5 of 14 Issued date : 98-11-06

1.1 Tested Methodology

Radiated testing were performed according to the procedures in FCC/ANSI C63.4(1992). Radiated testing was performed at a distance of 3 meters from the antenna to EUT.

1.2 Test Facility

The open area site measurement facility used to collect the radiated data is located on 108, Yokowa-cho, Ise-shi, Mie-ken, 516-1106 Japan.

This site has been fully described in a report dated Aug. 1, 1997 submitted to FCC office, and accepted in a letter dated Sep. 16, 1997 (31040/SIT 1300F2) and accepted Feb. 19, 1998 (IC2973-3) by Industry Canada.

2 Product Description

ALPINE ELECTRONICS, INC. Model NRC301 (referred to as the EUT in this report) is a Remote Control Security System.

The specification is as following:
Operation Frequency : 4.19MHz

Radio Frequency Output Power : 77dBV/m or less at 3m Power Supply : DC 3V (Lithium battery) Antenna : Built-in type (Fixed)

Type of modulation : ASK

3 Tested Equipment Details

The FCC IDs for all equipment, plus description of all cables used in the tested system are:

Model	FCC ID	Description	Cable description	Backshell Material
(1) ALPINE M/N: NRC301 S/N: -	A269ZUA125	Remote Control Security System (Transmitter)

4 SYSTEM TEST CONFIGURATION

4.1 Justification

The measurement was performed with the system configuration shown in Figure 4.2. Running mode was taken for the EUT operation mode.

4.2 Test Procedure

Tabletop Equipment Radiated Emissions

EUT was placed on a platform of nominal size, 1m by 1.0m, raised 80cm above the conducting ground plane. Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength.

5.1 Measurement Uncertainty

Radiated Emission Test

The measurement uncertainty (with a 95% confidence level) for this test was 3.3dB.

The data listed in this test report may exceed the test limit because it does not have enough margin (more that 3.3dB).

The data listed in this test report has enough margin, more that 3.3dB.

6 RADIATED EMISSION DATA

The initial step in collecting radiated data was a spectrum analyzer peak scan of the measurement range(30KHz-4400MHz). The final data was reported in the worst-case emissions. (Calculation)

The minimum margin to the limit is as follows:

* 30MHz 4400MHz

	Frequency	Receiver Reading		rrection ctor	Field Strength	Limit	Margin
	(GHz)	(dBV)	(dBV)	(dBV/m)	(dBV/m)	(dBV)	
_	1.30164	65.3	-10	5.3	49.0	54.0	5.0

The Fandamental Frequency of this equipment is 433.9MHz. The peak of output level of fandamental frequency was confirmed at the 433.9MHz by perfarming the meaurement.

It was corroborated that equipment was within of the tolerance which is prescribed

in the FCC regulation Part 15 Subpart C sec. 15.231 (c).

Since the fandamental frequency is 433.9MHz, the upper limit could be 434.9 and lower limit could be 432.8MHz.

The measurement result was 434.1MHz when the limit was 434.9MHz and also another measurement result was 433.7 when the limit was 432.8MHz.

Any spurious emissions did not detect except fandamental frequency's spurious.

6.1 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor, Cable Factor and Antenna Pad, and subtracting the Amplifier Gain from the measured reading. The sample calculation is as follows:

* 30MHz 1000MHz

FS = RA + AF + CF + AT - AG

where FS = Field Strength

RA = Receiver Reading

AF = Antenna Factor

CF = Cable Factor

AT = Antenna Pad

AG = Amplifier Gain

Assume a receiver reading of 65.3 dBV is obtained. The antenna Factor of 23.0 dB, Cable Factor of 3.9 dB is added The Antenna Pad of 6.0 dB and Amplifier Gain of 37.2 dB is subtracted, giving a field strength of 49.0 dBV/m.

 $FS = 65.3 + 23.0 + 3.9 - 6.0 - 37.2 = 49.0 \ dBV/m$

FCC ID : A269ZUA125 Our reference : 18J0022-02 Page : 13 of 14 Issued date : 98-11-06

* 1000MHz 4400MHz

FS = RA + AF + CF - AG

where FS = Field Strength

RA = Spectrum Analyzer Reading

AF = Antenna Factor

CF = Cable Factor

AG = Amplifier Gain

Assume a receiver reading of 65.3 dBV is obtained. The antenna Factor of 23.0, the Cable Factor of 3.9 dB dB is added. The Amplifier Gain of 37.2 dB is subtracted, giving a field strength of 55.0 dBV/m.

FS = 65.3 + 23.0 + 3.9 - 37.2 = 55.0 dBV/m

Calculation to the AV value from peak value

transmitting time about 660msec.

data 0 2ms.

data 1 2ms.

So we Calculated Maximum value of this trains are 50msec in 100msec. Voltage Average Level (V) = (Epeak tT) T = (EpeakV 50msec) 100msec This key performs only one trains transmitting (660msec) by one push.

So we think this equipment model NRC301 is conform to FCC Part 15 Subpart C limit.
