## EMI TEST REPORT

### FCC PART 15 SUBPART B

APPLICANT : NEC Corporation

CLASS OF REGULATION : B

MEASURING DISTANCE : 3 m

MEASUREMENT PROCEDURE : ANSI C63.4-1992

EQUIPMENT : TRAVAN NS LOADER

TRADE NAME : NEC

MODEL NUMBER : TL620NS

FCC ID CODE : \*\*\*\*\*

SERIAL NUMBER : 1055

COMPANY NAME : NEC Corporation

ADDRESS : 1-10, Nisshin-cho, Fuchu-shi, Tokyo

: 183-8501 Japan

DATE OF TEST : 4-6. November. 1998

REPORT No. : OTMAJ No. A0078

TEST SITE : YAMANASHI EMC OPEN FIELD No.3 TEST SITE

LOCATION : No.1661, OHSYUKU, ASHIGAWA-MURA, HIGASHI-

: YATSUSHIRO-GUN YAMANASHI-KEN 409-3704 JAPAN

FCC FILE NUMBER : 31040-SIT 1300F2

NVLAP LAB CODE : 200175-0

Measurement Results: Positive

## TABLE OF CONTENTS

### TITLE

1.0 .....	CONFIGURATION
2.0 .....	TEST PROGRAM
3.0 .....	COMMENT AT THE MEASUREMENTS
4.0 .....	MEASUREMENT UNCERTAINTY
5.0 .....	DESCRIPTION OF THE EUT
6.0 .....	DEVICES USED FOR THE TEST
7.0 .....	CABLES USED
8.0 .....	RADIATED RADIO NOISE MEASUREMENTS
9.0 .....	AC POWER LINE CONDUCTED RF VOLTAGE MEASUREMENTS
10.0 .....	LIST OF MEASURING INSTRUMENTS
11.0 .....	MEASUREMENT RESULTS
11.1 .....	RADIATED RADIO NOISE MEASUREMENT
11.2.....	AC POWER LINE CONDUCTED RF VOLTAGE MEASUREMENT

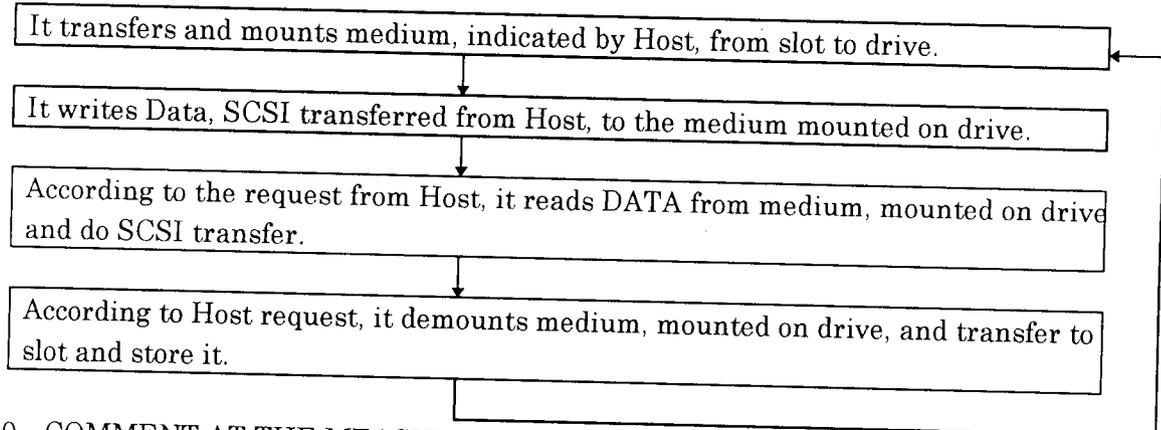

1.0 CONFIGURATION

The test configuration consists of a Personal computer (PC) Display (CRT) Keyboard(KB) Mouse (MS) PRINTER(PRT) and TRAVAN NS LODER (EUT) when the devices are connected to the I/F cable. All peripherals including EUT are operating during the test. AC120V 60Hz power supplied to the EUT with 3.0meters non-shielded power cable.

2.0 TEST PROGRAM

Operation mode: data back up

Operation flow : During test, it operates as below flow;

3.0 COMMENT AT THE MEASUREMENTS

The preliminary searches were carried out for all available modes and cable layout modes to produce maximum emissions at each frequency and finally it was found that the above configuration emanates larger emission levels on both conducted and radiated emission Measurements.

Every I/F cables that hang closer than 40 centimeter to the ground plane are bundled 30 to 40 centimeter in length about in the middle between ground plane and table.

The test report results are found to be compliant with the FCC part 15 subpart B of the specifications.

The minimum margins to the limits are;

Radiation measurement

1.2dB at 33.31MHz Vertical polarization

Conduction measurement

2.7dB at 0.4896MHz

The photographs show the cable and equipment layout which produces maximum emissions.

- 3-1 The test results in this report shall be effective only for the ITEM tested.
- 3-2 This report shall not be reproduced except in full, without the written approval of the laboratory.
- 3-3 NVLAP accreditation shall not constitute any product endorsement by NVLAP or any agent of the U.S.Government.

4-6.Nov.1998 OHTAMA CO.,LTD  
REGULATION : FCC Class B

MODEL : TL620NS  
REPORT No. : OTAMJ No.A0078

#### 4.0 MEASUREMENT UNCERTAINTY

The measured test results may contain measurement uncertainty.  
The measurement uncertainty values are estimated as follows.

##### Radiated emission uncertainty

: Used Biconical antenna

about +3.9 ~ -3.9dB

: Used Logperiodic antenna

about +4.7 ~ -3.2dB

##### Conducted emission uncertainty

about  $\pm 2.5$ dB

## 5.0 DESCRIPTION OF EQUIPMENT

This EUT consists of Magnetic Tape Medium Storage Room (SLOT) which stores Magnetic Tape Medium, Magnetic Tape Drive which writes/reads data on Magnetic Tape Medium and Magnetic Tape Medium Accessor Mechanism (ACC) which transfer Magnetic Tape Medium between Magnetic Tape Drive and Magnetic Medium Storage Room.

This EUT reads/writes data and controls Magnetic Tape Medium Accessor Mechanism according to the command from Host.

It usually used as auto back up equipment on server etc.

The clock frequency used in the EUT are 20.00MHz, 24MHz and 40MHz.

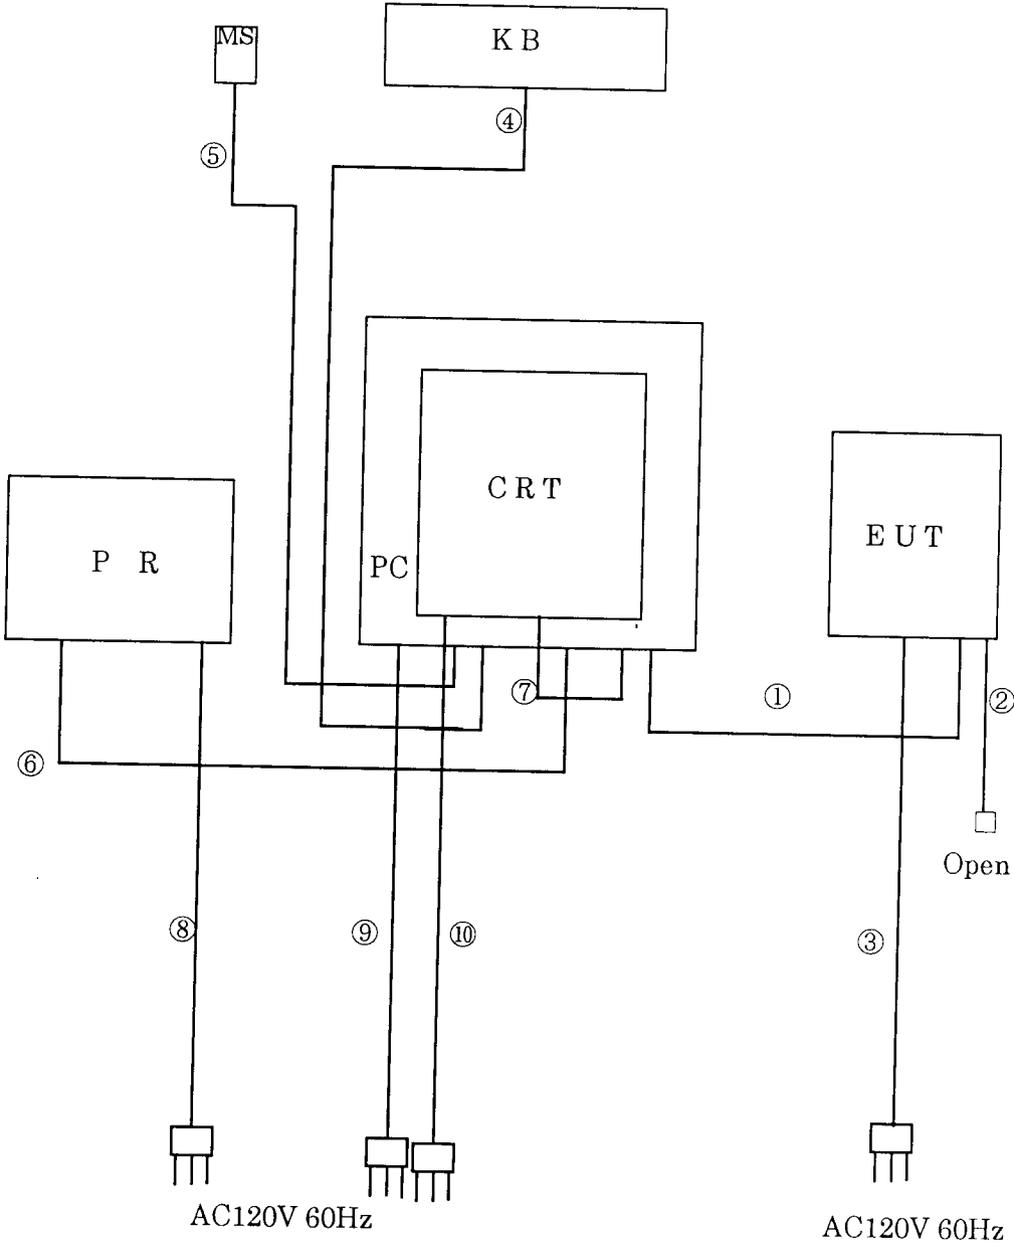

The switching frequency of the AC power supply unit in the EUT is 100kHz.

The power rating of the EUT is AC120V 60Hz and AC power cable is provided through 3.0 meters non-shielded cable.

The serial number of the EUT is 1055.

The EUT is manufactured in November 1998.

Configuration of the system for EMI testing

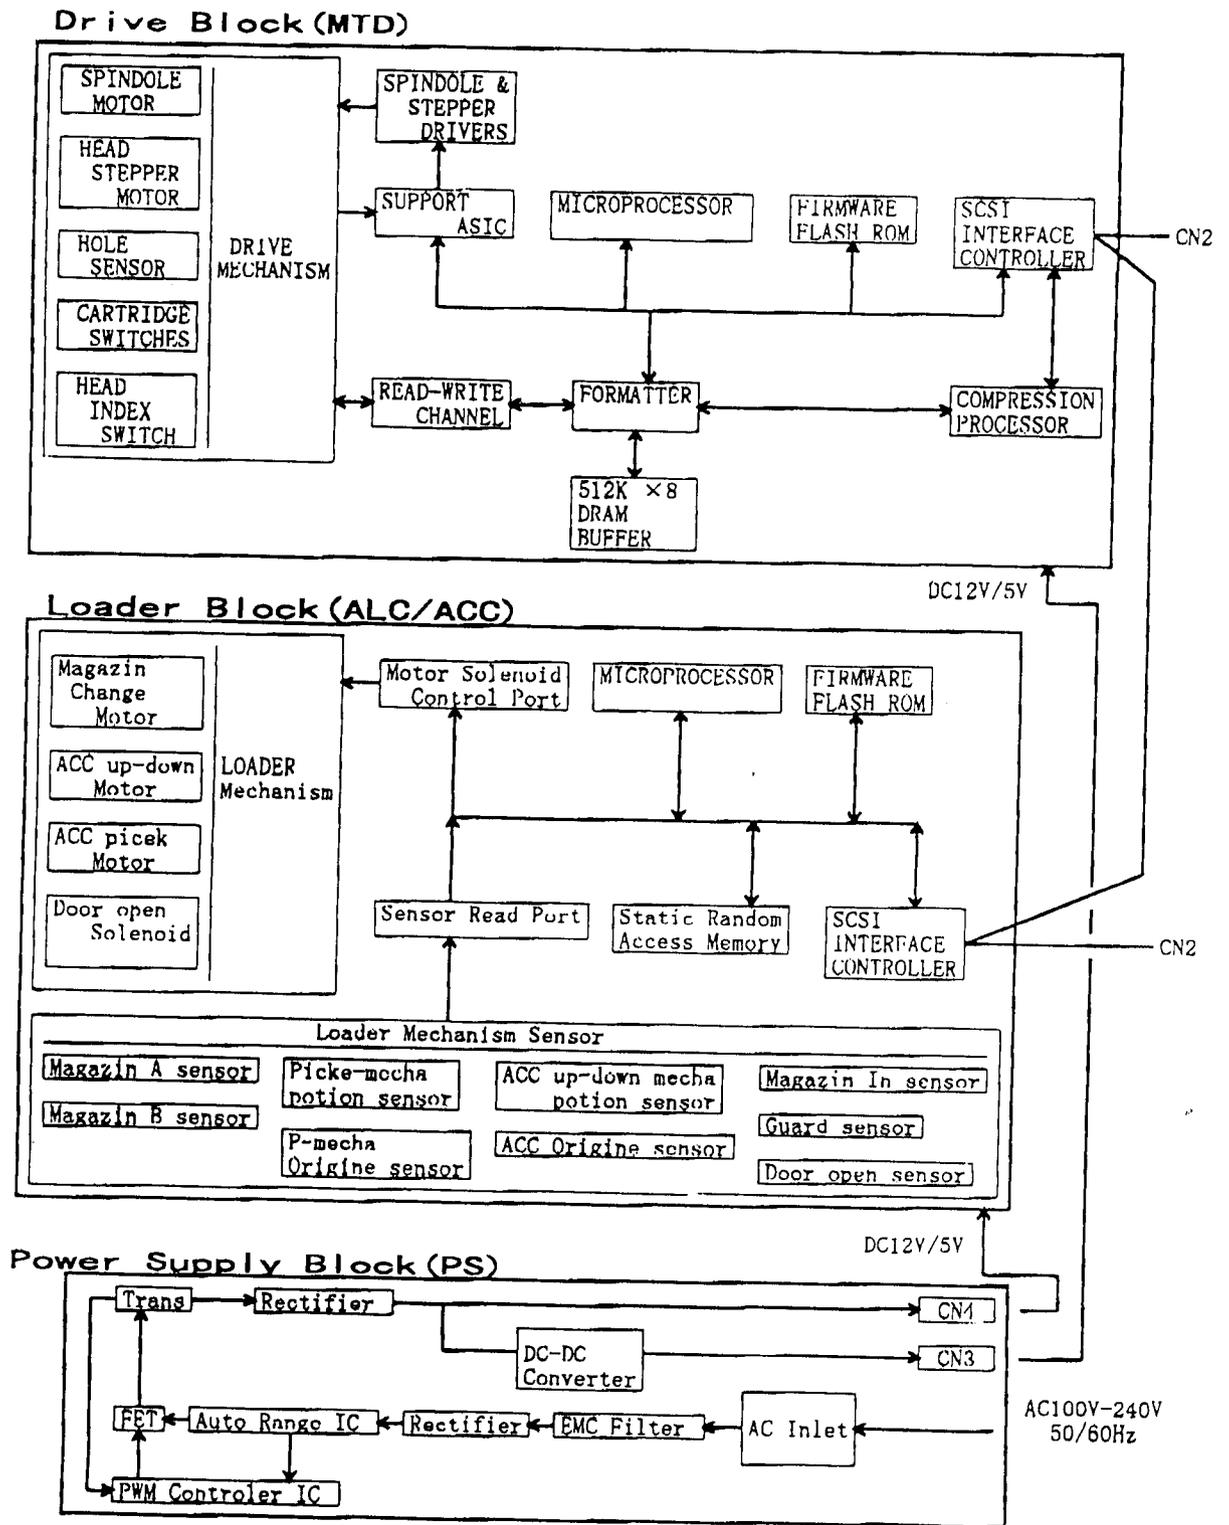

## 6.0 DEVICES USED FOR THE TEST

MARK	NAME	MODEL	SERIAL.No.	MAKER	FCC ID

①	SCSI Cable	0.9m	Yes	EUT	PC
②	SCSI Cable	0.9m	Yes	EUT	Open
③	AC Cable	3.0m	None	AC120V	EUT
④	Keyboard Cable	2.3m	None	KB	PC
⑤	Mouse Cable	1.8m	None	MS	PC
⑥	Printer Cable	2.0m	None	PRT	PC
⑦	CRT Cable	1.4m	None	CRT	PC
⑧	AC Cable	1.7m	None	AC120V	PRT
⑨	AC Cable	3.0m	Yes	AC120V	PC
⑩	AC Cable	3.0m	Yes	AC120V	CRT

Circuit diagram of the EUT

## 8.0 Radiated radio noise measurement

The setting up of the equipments, its interface cables, and the operating conditions of the EUT in seeking the maximum emission levels are duly in accordance with the testing procedures that are described in ANSI C63.4-1992.

Test shall be performed as the following procedure:

- 1) By using broad band antenna(Biconical-antenna, Log-periodic antenna) and the spectrum analyzer, the frequency and approximate level of radiated emission shall be checked
- 2) By using the field strength meter and the broad band antenna or half wave dipole antenna, the field strength for above checked frequency shall be measured in order.  
When testing, the ascent and descent of the measuring antenna and the rotation of the EUT turntable are operated with each frequency.

Calculation of measuring data:

The field strength of the EMI is available from reading the value at the field strength meter multiplied by the antenna factor.

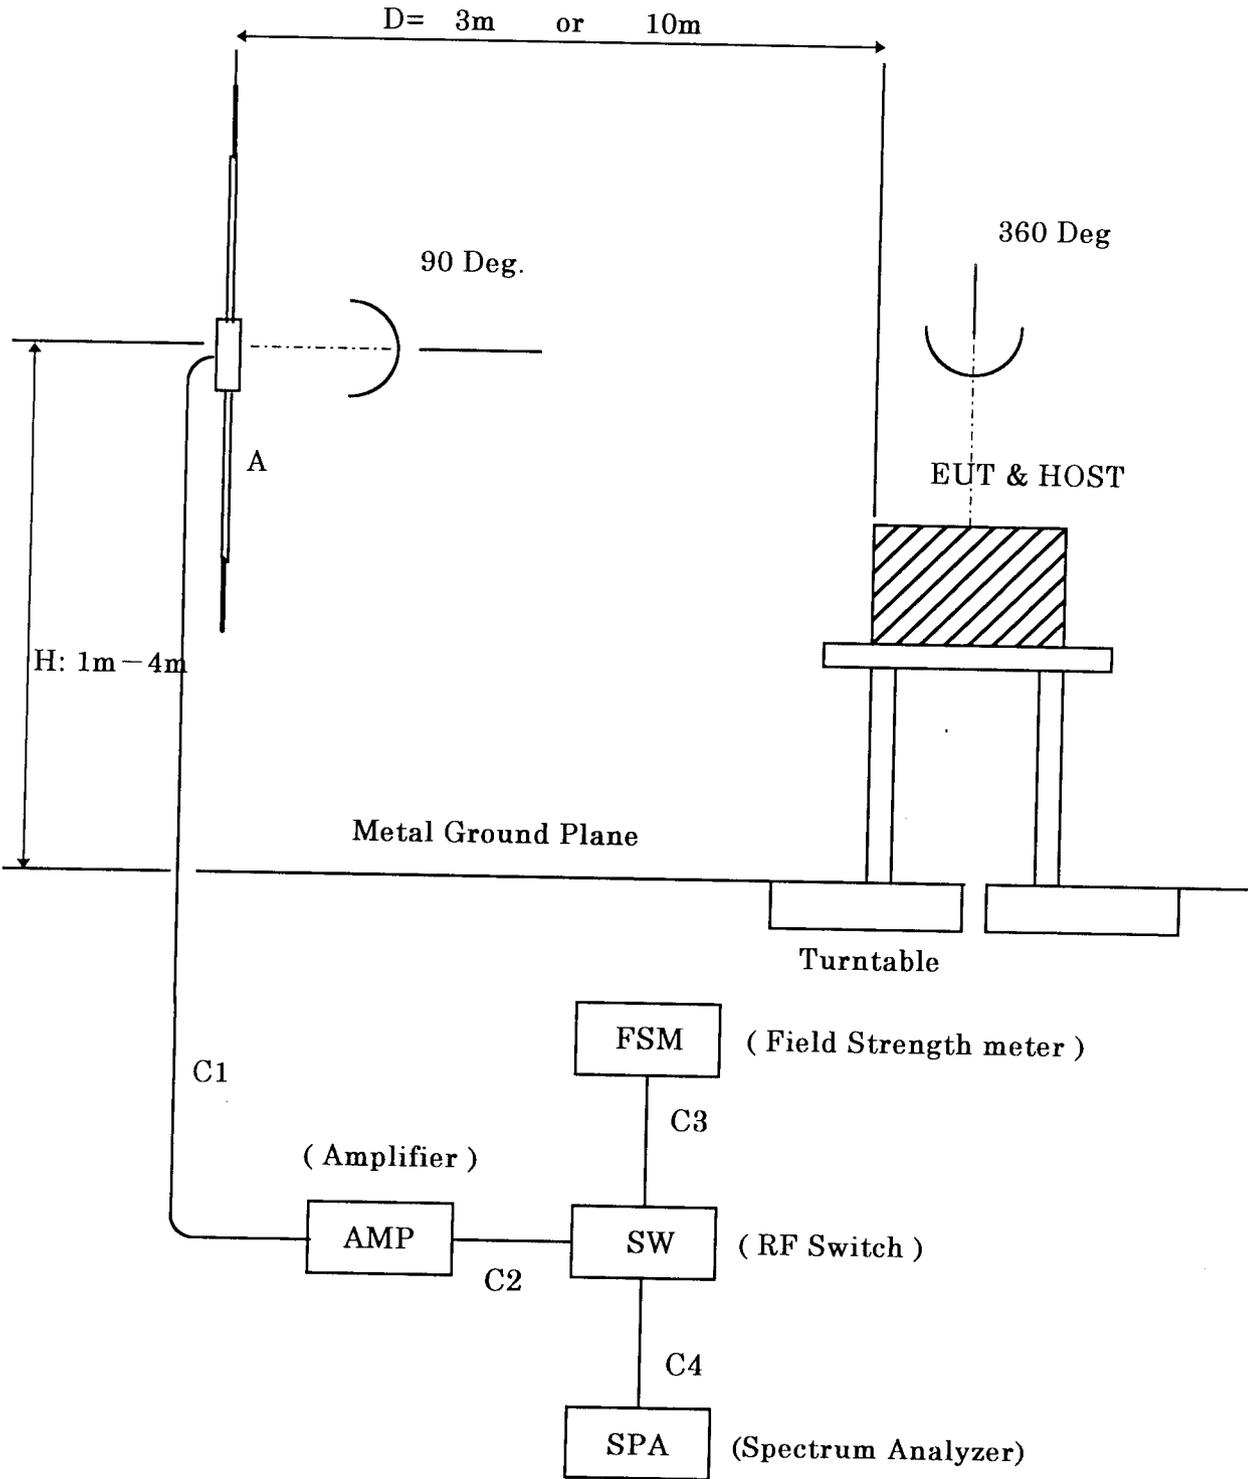

The following is the formula to express its calculation.

Radiated field strength level [dB  $\mu$  V/m]  
= reading value at Field Strength Meter [dB  $\mu$  V] + correction factor [dB/m] .

We show the schematic of the measuring equipments for RFI emissions and the equipment list in the next page.

: Correction factor means Antenna factor + Cable loss + Pad - Preamp gain.

DETAILS OF LOCATION OF EQUIPMENT FOR RADIATED  
RADIO NOISE MEASUREMENT

## 9.0 AC power line conducted RF voltage measurements

Measurement of AC power line conducted RF voltage is made in the shielded enclosure installed in the ground floor underneath the metal ground plane.

The dimension of this shielded enclosure is 9 meters in length, 4 meters in width and 3 meters in height.

In case the EUT is desk top type, it is set up on a desk made of wood, the top of which is 1.0 meter by 1.5 meters in size and height 0.8 meter above the metal plane and the EUT is a floor type, it is set up on a plane made of rubber above the metal plane.

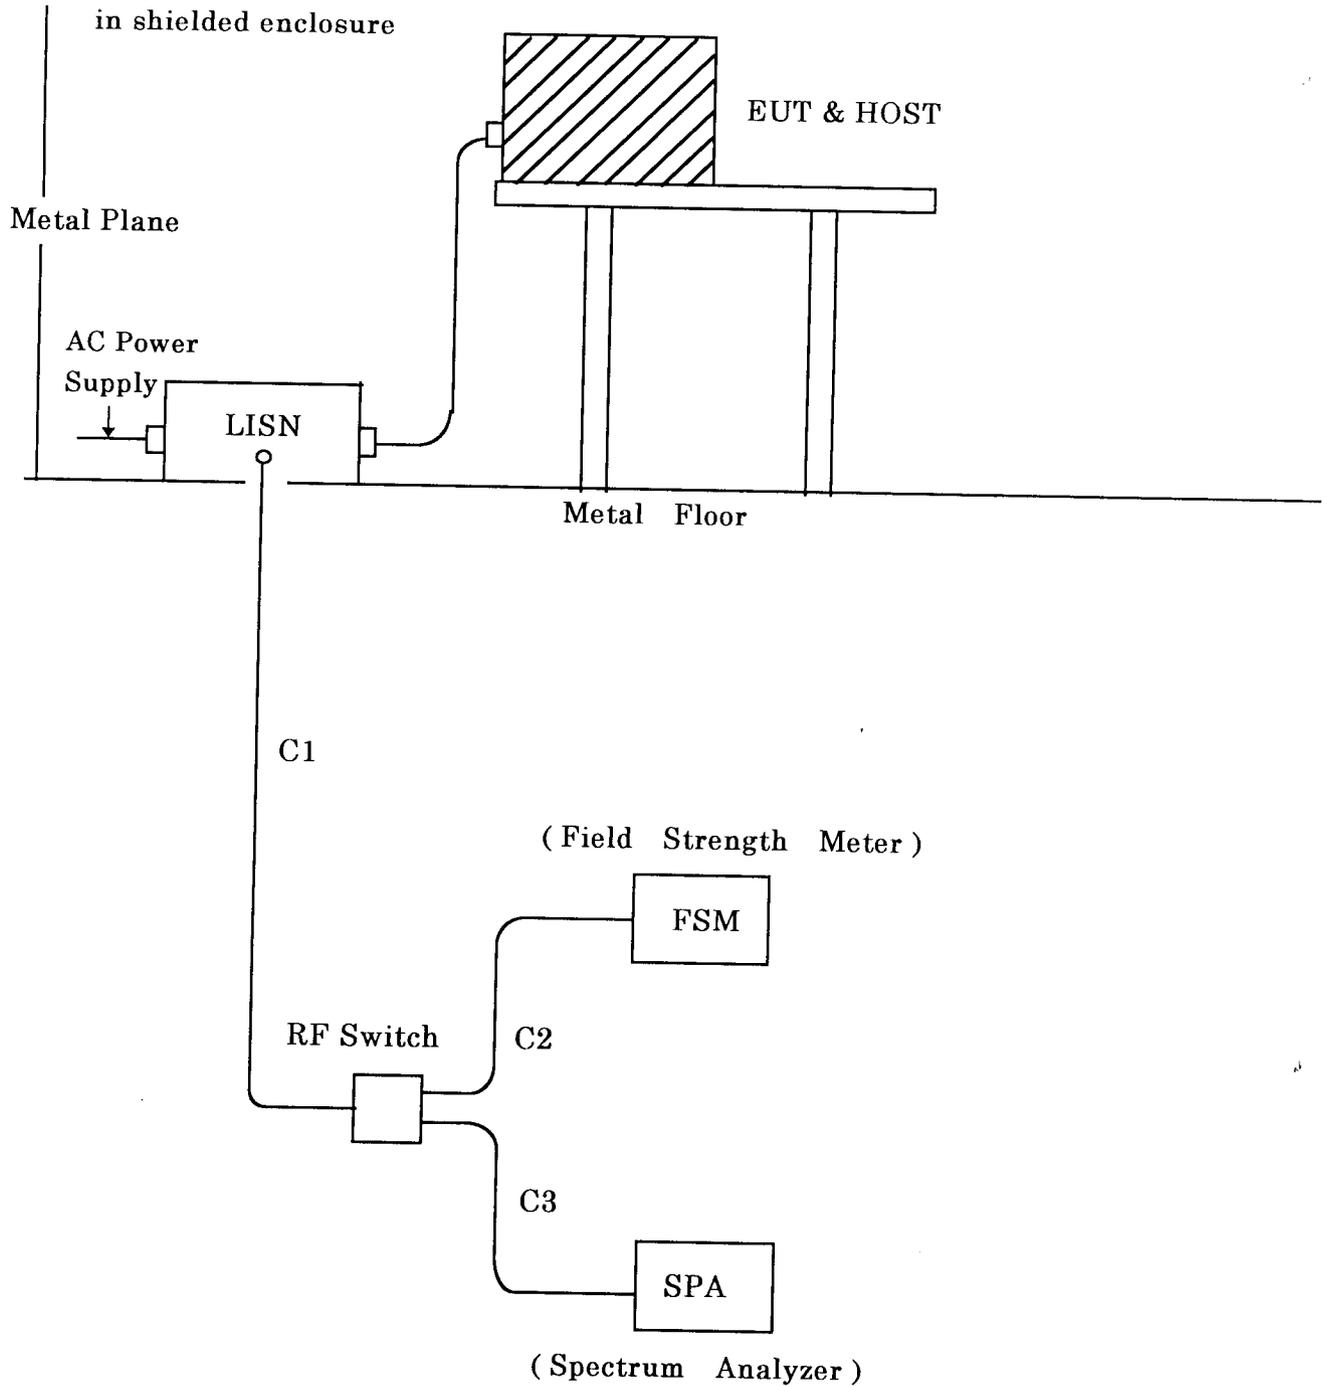

It is view show in the measurement results.

The measuring data is calculated as the following formula

$$\text{RF voltage} = \text{reading [dB } (\mu \text{ V)] of field strength meter} + \text{cable loss(dB).} \\ + \text{LISN correction factor.}$$

We show the schematic of the measuring equipments for AC power line conducted RF voltage and the equipment list in the next page.
