Hi, Jenny,

Please address following issues.

Q#1: Please confirm this keyboard is designed to work with Galaxy Tab only firstly. And then please include its FCC ID on the file of "BKC-1C9_Antenna location" and also include the technical justification to explain why co-location SAR is not required. → Yes, It is only for Galaxy Tab. Plz find attached antenna location .

Q#2: Please provide updated external photos to include phones showing the keypad at the lap help position and the charger jack. Don't include the Galaxy Tab on it → Plz find attached updated external photo.

Q#3: The frequency range indicated on the block diagram is from 2.4GHz to 2.49GHz which is out of the allowed frequency used in USA. Please address. → It is modified to 2402~2480 MHz.

Q#4: According to the Block diagram, this keyboard can be charged through a USB port. Please clarify if the wireless keyboard can still work during the charging. → no, It's not possible.

It is declared on page 3 of Test report.

FYI: Per RSS-GEN, IC ID cannot be formed by CN-UPN as IC:XXXXX-XXXXX. The UPN code can only be A-Z or 0-9. However, ID assigned is IC: 649E-BKC-1C9 which has a "-" in the UPN code which is not acceptable. Please check Samsung to re-defined the IC ID.

Best Regards,
Lucy Tsai/UL CCS
