FCC ID: A3LEJP5450

According to KDB 447498 D01 General RF Exposure Guidance.

At 100 ㎒ to 6 ㎓ and for test separation distances ≤ 50 ㎜, the SAR test exclusion threshold is determined according to the following

[(max. power of channel, including tune-up tolerance, ㎽) / (min. test separation distance, ㎜)] x [√f(㎓)] ≤ 3.0

1. SAR test exclusion threshold
Frequency: 2 480 ㎒ (min. separation distances = 0 ㎜)
SAR test exclusion thresholds(5 ㎜) = 3 x 5 / (√ 2.480) = 9.525 ㎽

Max. tune-up tolerance (㎽)	SAR Test Exclusion Thresholds (5 ㎜) (㎽)
1.259	9.525

Calculation value: 1.259 (㎽) / 5 (㎜) x √ 2.480 = 0.397
So, Calculation value ≤ 3.0

Remark;
- Max. conducted power (㎽): maximum tolerance power of EUT (1 ㏈m)
- Max. conducted power 1.259 (㎽) was calculated.
- When the minimum test separation distance is < 5 ㎜, a distance of 5 ㎜ is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
