Subject: Request for Superseding SAR Report

FCC ID: A3LGTP3100

To Whom It May Concern:

This model: GT-P3100, FCC ID: A3LGTP3100 does not support GPRS VoIP at service network and VoIP applications.

Because popular VoIP usage (i.e. WIFI or comparable) need more than 1Mbps for optimal use, but GPRS/EDGE networks (< 1 Mbps) do not support enough data rate for an-effective VOIP conversation. Therefore carriers do not support VOIP over their networks for two way voice communications for higher latency 2G or 3G networks.

Therefore, this model's VoIP service could not use on GPRS/EDGE networks. Revised SAR report has the GPRS VOIP test result removed. And the highest head SAR value becomes 0.8W/kg now. This will not have any impact on the EMC and RF portion.

Best Regards
