FCC ID:A3LS160
Class II permissive change filing

To Whom It May Concern:

This is written statement from Compliance Certification Services , the TCB who issued the Class II permissive change grant.

The changes as described in this filing is to remove the ferrite core that was added in the original application. This ferrite core is located on the external headset audio cable which has not effect on the SAR evaluation.

This application has been discussed with Mr. Martin Perrine at FCC. Per the instructions from Mr. Perrine as indicated in the following text:

“If Ferrite core is on an external headset than no change is needed. We allow any headset to be used with a device.

If the Ferrite core is internal to the device than we would like to see that SAR is not effected. SAR testing at the worst case point with and without the ferrite is sufficient.”

The location of ferrite core as documented in the original filing:

Base upon assessment, CCS/TCB has determined that SAR evaluation is not required for this Class II permissive change filing.

If there is any question about this statement, please feel free to contact me.

Best Regards
