

(1) You can divide two parts

(2) You can add upper part of label on the front (between lens & grip)
For global version, upper label is added on the protect vinyl that covers some space between lens & grip, so customer can remove IMEI label if they remove this protect vinyl.

(3) You can add smaller label at inside of battery cover. This small IMEI label only has IMEI no. & S/N no. ..no barcodes.
