

LTE Band 41 Attestation for FCC ID: A3LSME7000

LTE Band 41 (TDD) covers the span of 2496-2690 MHz. However, due to different spectrum availability in different countries, this device is designed to support only partial LTE Band 41.

The device, FCC ID A3LSME7000, is designed to be marketed in China. The frequency range supported by Band 41 is limited to 2555-2655 MHz. The devices' hardware and software cannot support frequencies outside of the FCC authorization. The implementation details are included in the Operational Descriptions Exhibit. Our customers ask us to obtain FCC certification to support device roaming in the US but only for the frequency range supported and licensed in China, the main location of use for this device.

Best regards,
