### 7.5 Peak-Average Ratio

## Test Overview

A peak to average ratio measurement is performed at the conducted port of the EUT. The spectrum analyzers Complementary Cumulative Distribution Function (CCDF) measurement profile is used to determine the largest deviation between the average and the peak power of the EUT in a given bandwidth. The CCDF curve shows how much time the peak waveform spends at or above a given average power level. The percent of time the signal spends at or above the level defines the probability for that particular power level.

## Test Procedure Used

KDB 971168 D01 v03r01 - Section 5.7.1

## Test Settings

1. The signal analyzer's CCDF measurement profile is enabled
2. Frequency = carrier center frequency
3. Measurement BW $\geq$ OBW or specified reference bandwidth
4. The signal analyzer was set to collect one million samples to generate the CCDF curve
5. The measurement interval was set depending on the type of signal analyzed. For continuous signals ( $>98 \%$ duty cycle), the measurement interval was set to 1 ms .

## Test Setup

The EUT and measurement equipment were set up as shown in the diagram below.

Figure 7-4. Test Instrument \& Measurement Setup

## Test Notes

None.

### 7.6 Additional Maximum Power Reduction (A-MPR)

$\underline{\mathbf{2} .1046}$

## Test Overview

A-MPR is implemented in this device when operating at Power Class 2 in LTE Band 41 per the A-MPR specification in 3GPP TS 36.101. The conducted powers are shown herein to cover the different A-MPR levels specified in the standard. Measurement equipment was set up with triggering/gating on the spectrum analyzer such that powers were measured only during the on-time of the signal.

## Test Procedure Used

KDB 971168 D01 v03r01 - Section 5.2.2

## Test Settings

1. $\operatorname{Span}=2 \times$ OBW to $3 \times$ OBW
2. $\mathrm{RBW}=1 \%$ to $5 \%$ of the OBW
3. Number of measurement points in sweep $\geq 2 \times$ span / RBW
4. Sweep = auto-couple (less than transmission burst duration)
5. $\quad$ Detector $=$ RMS (power)
6. Trigger was set to enable power measurements only on full power bursts
7. Trace was allowed to stabilize
8. Spectrum analyzer's "Channel Power" function was used to compute the power by integrating the spectrum across the OBW of the signal

## Test Setup

The EUT and measurement equipment were set up as shown in the diagram below.

Figure 7-5. Test Instrument \& Measurement Setup

## Test Notes

None.

### 7.7 Uplink Carrier Aggregation

\$22.917(a) \$27.53(h)

## Test Overview

The EUT is set up to transmit two contiguous LTE channels. The power level of both carriers and the various conducted spurious and harmonic frequencies is measured by means of a calibrated spectrum analyzer. The spectrum is scanned from the lowest frequency generated in the equipment up to a frequency including its $10^{\text {th }}$ harmonic. All out of band emissions are measured with a spectrum analyzer connected to the antenna terminal of the EUT while the EUT is operating at its maximum duty cycle, at maximum power, and at the appropriate frequencies. All data rates were investigated to determine the worst case configuration. All modes of operation were investigated and the worst case configuration results are reported in this section.

For Band 38/41, the minimum permissible attenuation level of any spurious emission is $55+$ 10log $_{10}\left(P_{[\text {wats }}\right)$.

## Test Procedure Used

KDB 971168 D01 v03r01 - Section 6.0

## Test Settings

1. Start frequency was set to 30 MHz and stop frequency was set to at least 10 * the fundamental frequency (separated into at least two plots per channel)
2. Detector $=$ RMS
3. Trace mode = trace average for continuous emissions, max hold for pulse emissions
4. Sweep time $=$ auto couple
5. The trace was allowed to stabilize
6. Please see test notes below for RBW and VBW settings

## Test Setup

The EUT and measurement equipment were set up as shown in the diagram below.

Figure 7-6. Test Instrument \& Measurement Setup

| FCC ID: A3LSMG977T | (1) PCTEST | MEASUREMENT REPORT (CERTIFICATION) | nmsunf | Approved by: <br> Quality Manager |
| :---: | :---: | :---: | :---: | :---: |
| Test Report S/N: <br> 1M1903060032-03.A3L | Test Dates: 01/22-05/08/2019 | EUT Type: <br> Portable Handset |  | Page 239 of 348 |

## Test Notes

1. Uplink carrier aggregation is only supported in this EUT for LTE Band 5 and Band 66.
2. Conducted power and spurious emissions measurements were evaluated for the two contiguous channels using various combinations of RB size, RB offset, modulation, and channel bandwidth. Channel bandwidth data is shown in the tables below based only on the channel bandwidths that were supported in this device. The worst case (highest) powers were found while operating with QPSK modulation, as shown in Table 73, 7-4, 7-5. 7-6, 7-7 and 7-8 below, with both carriers set to transmit using 1RB.
3. Compliance with the applicable limits is based on the use of measurement instrumentation employing a resolution bandwidth of 100 kHz or greater for frequencies less than 1 GHz and 1 MHz or greater for frequencies greater than 1 GHz . However, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed.
