Dear Sir.

Thank you for your reply.

Please find my answer in the email. text below, marked with Blue.

> 1. The User's Manual submitted for this device/application seems to be a preliminary draft with many markups. There seems to be some technical information about the device that does not agree with the rest of the application. ★1)There is reference to a 3dB Power Boost option that is not addressed in the test report.

★2)The specification seems to indicate 20W/Carrier (10W + 10W) but the report states 40W/carrier (20W + 20W). 3)★The manual states 5MHz bandwidth, but the report indicates varying channel Emission bandwidths from 1M40 - 4M80. 4)★The manual states that the RRH-P4 1.9GHz is approved under Part 27, but this device is being submitted for approval under FCC Part 24E. Please provide a more up-to-date final (or better draft) manual.

> 1) Report was written on. (Power boost mode was tested on.)

Please, check attached test report.

2) Please, Check attached User Manual _rev. (page 34, 2.3 Smart MBS Specification.)

3) CDMA is the simultaneous occurrence 4CARRIER when the

Worst case is sent up to 160W.

This trials tested 1CARRIER ~ 4CARRIER,

So the report was written in the 1M40M way.

4) User manual has been fixed. Please, Check

> 2. I am working on the best representation of the capabilities of this device to be listed on the TCB Grant. Please provide comments on this proposed listing/wording:

->ok. understand.

Please, Check.

With best regards,

Hee Yeon KIM / RF Team
