# Appendix F. Power Reduction Verification

### **Proximity Sensor Triggering Distance (KDB 616217 §6.2)**

Front, Rear, Left and Bottom of the DUT was placed directly below the flat phantom. The DUT was moved toward the phantom in accordance with the steps outlined in KDB 616217 §6.2 to determine the trigger distance for enabling power reduction. The DUT was moved away from the phantom to determine the trigger distance for resuming full power.

The DUT featured a visual indicator on its display that showed the status of the proximity sensor (Triggered or not triggered). This was used to determine the status of the sensor during the proximity sensor assessment as monitoring the output power directly was not practical without affecting the measurement.

It was confirmed separately that the output power was altered according to the proximity sensor status indication. This was achieved by observing the proximity sensor status at the same time as monitoring the conducted power contains both the full and reduced conducted power measurements.

### Proximity Sensor Tilt Angle Assessment (KDB 616217 §6.4)

The DUT was positioned directly below the flat phantom at the minimum measured trigger distance with Bottom parallel to the base of the flat phantom for each band.

The EUT was rotated about Bottom for angles up to +/- 45°. If the output power increased during the rotation the DUT was moved 1mm toward the phantom and the rotation repeated.

This procedure was repeated until the power remained reduced for all angles up to +/- 45°.

Proximity sensor tilt angle assessment (Bottom) KDB 616217 §6.4

Summary of Tilt Angle Influence to Proximity Sensor Triggering (Bottom)

Band Minimum trigger distance measured according to KDB 616217 §6.2	Minimum distance at which	Power reduction status										
	power reduction was maintained over +/-45°	-45°	-35°	-25°	-15°	-5°	5°	15°	25°	35°	45°	
WCDMA II, IV	12 mm	12 mm	On	On	On	On	On	On	On	On	On	On
LTE B. 4, 66	12 mm	12 mm	On	On	On	On	On	On	On	On	On	On
