Power source : DC 3.85 V

Antenna specification : LTE/WCDMA_PIFA (Housing metal) Antenna

WIFI/Bluetooth(BDR/EDR/BLE) LDS Antenna

Antenna gain : WIFI/Bluetooth(BDR/EDR/BLE) : -6.4 dBi

Software version : R835U.001

Hardware version : REV1.0

Test device serial No. : Conducted(R3AM8001MVZ)

Radiated(R3AM8002B0R)

Operation temperature : $-30 \, ^{\circ}\text{C} \, \sim 50 \, ^{\circ}\text{C}$

2.1. Accessory information

| Equipment | Manufacturer | Model | Serial No. | Power source | FCC ID & IC |
|---------------------|-------------------------------------|----------|------------|--------------------|------------------------------|
| Wireless charger | Samsung Electronics Co., Ltd. | EP-OR825 | - | DC 5.0 V, 1.0 A | A3LEPOR825 / 649E-EPOR825 |

2.2. Information about derivative model

The difference between basic model and derivative models is:

Hardware is identical with the basic model and software is as follows.

- a. For the model SM-R835U:
 - 3G(B2,B4,B5), 4G(B2,B4,B5,B12,B13,B25,B26,B66) are enabled by software.
- b. For the model SM-R835F:
 - 3G(B2,B4), 4G(B2,B4,B12,B13,B25,B26,B66) are disabled by software.
 - 3G(B1,B8), 4G(B1,B3,B7,B8,B20) are enabled by software.
- c. In USA, 4G(B7) disabled by MCC code. Because device doesn't support B7 roaming in USA.
- d. All other protocol part is same and all other features of Volte, SUPL is same.

This test report shall not be reproduced, except in full, without the written approval KCTL-TIR001-003/3 KP20-05364

Summary of tests

| FCC Part section(s) | Parameter | Test results | |
|---------------------|-----------------------------|--------------|--|
| 90.635 | Effective Radiated Power | Pass | |
| 2.1053 90.691(a) | Radiated Spurious Emissions | Pass | |

Notes:

- 1. All modes of operation were investigated and the worst case emissions are reported with the EUT positioning, modulations, RB sizes and offsets, and channel bandwidth configurations in the test data.
- 2. The fundamental of the EUT was investigated in three orthogonal orientations X, Y and Z. It was determined that X orientation was worst-case orientation. Therefore, all final radiated testing was performed with the EUT in X orientation.
- 3. All the radiated tests have been performed two modes (with charger and without charger)
- 4. For ERP/EIRP tests, the LTE Band 26 was performed with charger for evaluation of worst case mode.
- 5. The test procedure(s) in this report were performed in accordance as following.
 - ANSI C63.26-2015
 - ANSI/TIA-603-E-2016
 - KDB 971168 D01 v03r01
- 6. The test mode and channel set for this C2PC filing test was based on the worst case condition raised in original report, KR19-SRF0098-A.
- 7. The maximum production power and tolerance are not impacted by the change stated in the C2PC letter.

4. Measurement uncertainty

The measurement uncertainties shown below were calculated in accordance with the requirements of ANSI C63.4-2014.

All measurement uncertainty values are shown with a coverage factor of k=2 to indicated a 95 % level of confidence. The measurement data shown herein meets of exceeds the U_{CISPR} measurement uncertainty values specified in CISPR 16-4-2 and thus, can be compared directly to specified limits to determine compliance.

| Parameter | Expanded uncertainty (±) | | |
|-----------------------------|--------------------------|----------------|--|
| | 9 kHz ~ 30 MHz: | 2.28 dB | |
| Radiated spurious emissions | 30 MHz ~ 1 GHz | 3.68 dB | |
| | Above 1 GHz | 5.72 dB | |

5. Test results

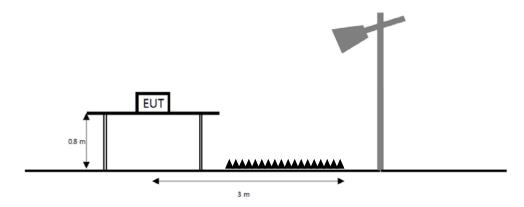

5.1. Radiated Power (ERP/EIRP)

Test setup

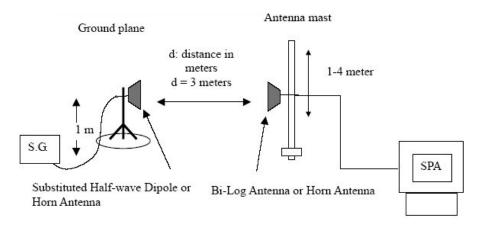

The diagram below shows the test setup that is utilized to make the measurements for emission from 30 Mz to 1 GHz emissions.

The diagram below shows the test setup that is utilized to make the measurements for emission from 1 $\mbox{ }$ to the tenth harmonic of the highest fundamental frequency or to 40 $\mbox{ }$ emissions, whichever is lower.

The diagram below shows the test setup for substituted method.

65, Sinwon-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do, 16677, Korea TEL: 82-31-285-0894 FAX: 82-505-299-8311

www.kctl.co.kr

Report No.: KR20-SRF0312-A

Page (10) of (15)

Limit

According to §90.635(b), the maximum output power of the transmitter for mobile stations is 100 watts(20 dBw).

Test procedure

971168 D01 v03r01 - Section 5.2 and 5.8 ANSI 63.26-2015 - Section 5.2 ANSI/TIA-603-E-2016 - Section 2.2.17

Test settings

- 1) RBW = 1 % to 5 % of the OBW.
- 2) VBW \geq 3 × RBW.
- 3) SPAN = $2 \times \text{to } 3 \times \text{the OBW}$.
- 4) Number of measurement points in sweep ≥ 2 × span / RBW.
- 5) Sweep time:
 - 1) Auto couple, or
 - 2) ≥ [10 × (number of points in sweep) × (transmission period)] for single sweep (automation-compatible) measurement. Transmission period is the on and off time of the transmitter.
- 6) Detector = RMS
- 7) If the EUT can be configured to transmit continuously, then set the trigger to free run.
- 8) If the EUT cannot be configured to transmit continuously, then use a sweep trigger with the level set to enable triggering only on full power bursts and configure the EUT to transmit at full power for the entire duration of each sweep. Verify that the sweep time is less than or equal to the transmission burst duration. Time gating can also be used under similar constraints (i.e., configured such that measurement data is collected only during active full -power transmissions).
- 9) Trace mode = trace averaging (RMS) over 100 sweeps.
- 10) Compute the power by integrating the spectrum across the OBW of the signal using the instrument's band or channel power measurement function, with the band/channel limits set equal to the OBW band edges. If the instrument does not have a band or channel power function, then sum the spectrum levels (in linear power units) at intervals equal to the RBW extending across the entire OBW of the spectrum.
- 11) Allow trace to fully stabilize.

65, Sinwon-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do, 16677, Korea TEL: 82-31-285-0894 FAX: 82-505-299-8311

www.kctl.co.kr

Report No.: KR20-SRF0312-A

Page (11) of (15)

Notes:

- 1. On a test site, the EUT shall be placed at 80 cm height on a turn table, and in the position close To normal use as declared by the applicant.
- 2. The test antenna shall be oriented initially for vertical polarization located 3 m from EUT to Correspond to the fundamental frequency of the transmitter.
- 3. The turntable is rotated through 360°, and the receiving antenna scans in order to determine the Level of the maximized emission.
- 4. The test antenna shall be raised and lowered again through the specified range of height until the maximum signal level is detected by the measuring receiver.
- 5. The maximum signal level detected by the measuring receiver shall be noted.
- 6. The EUT was replaced by half-wave dipole (1 GHz below) or horn antenna (1 GHz above) connected to a signal generator.

The power is calculated by the following formula;

Pd(dBm) = Pg(dBm) - Cable loss (dB) + Antenna gain (dB)

Note. Pd is the dipole equivalent power and Pg is the generator output power into the substitution antenna.

- 7. The test antenna shall be raised and lowered through the specified range of height to ensure that The maximum signal is received.
- 8. The input signal to the substitution antenna shall be adjusted to the level that produces a level Detected by the measuring corrected for the change of input attenuator setting of the measuring Receiver.
- 9. The input level to the substitution antenna shall be recorded as power level in dBm, corrected for Any change of input attenuator setting of the measuring receiver.
- 10. The measurement shall be repeated with the test antenna and the substitution antenna Orientated for horizontal polarization.

Page (14) of (15)

Limit

According to §90.691(a), Out-of-band emission requirement shall apply only to the "outer" channels included in an EA license and to spectrum adjacent to interior channels used by incumbent licensees. The emission limits are as follows:

- (1) For any frequency removed from the EA licensee's frequency block by up to and including 37.5 klb, the power of any emission shall be attenuated below the transmitter power (P) in watts by at least 116 $Log_{10}(f/6.1)$ decibels or 50 + $10Log_{10}(P)$ decibels or 80 decibels, whichever is the lesser attenuation, where f is the frequency removed from the center of the outer channel in the block in kilohertz where f is greater than 12.5 klb.
- (2) For any frequency removed from the EA licensee's frequency block greater than 37.5 klb, the power of any emission shall be attenuated below the transmitter power (P) in watts by at least 43 + 10Log₁₀(P) decibels or 80 decibels, whichever is the lesser attenuation, where f is the frequency removed from the center of the outer channel in the block in kilohertz and where f is greater than 37.5 kHz.

Test procedure

971168 D01 v03r01 - Section 6.2 ANSI 63.26-2015 - Section 5.5 ANSI/TIA-603-E-2016 - Section 2.2.12

Test settings

- RBW = 1 kHz for below 1 GHz and 1 MHz for above 1 GHz. 1)
- 2) VBW ≥ 3 × RBW.
- 3) Detector = RMS
- Trace mode = Max hold 4)
- 5) Sweep time = Auto couple
- Number of sweep points ≥ 2 × span / RBW 6)
- Allow trace to fully stabilize. 7)
