

RF Test Report

Bluetooth

Report No. : FCCBVCO-WAY-P21090030R2
Customer : Samsung Electronics Co., Ltd.
Address : 129, Samsung-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do,
16677, Korea
Use of Report : Certification
Model Name : SM-R875U (Alt. SM-R875F)
FCC ID (Model) : A3LSMR875 (SM-R875U, SM-R875F)
IC No. (Model) : 649E-SMR8751 (SM-R875F)
Date of Test : 2021.10.07 to 2021.10.15
Test Method Used : FCC 47 CFR PART 15 Subpart C (Section §15.247) /
ISED RSS-247
Testing Environment : Refer to the Test Condition
ISED# / CAB Identifier : 26316 / KR0158

Test Result : Pass Fail

ISSUED BY: BV CPS ADT Korea Ltd., EMC/RF Laboratory

ADDRESS: Innoplex No.2 106, Sinwon-ro 306, Yeongtong-gu,
Suwon-si, Gyeonggi-do, Korea 16675

TEST LOCATION: HeungAn-daero 49, DongAn-gu, Anyang-si,
Gyeonggi-do, Korea, 14119

Tested by

Name : Donghwa Shin

This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents. Unless specific mention, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification.

1 Summary of Test Results

The EUT has been tested according to the following specifications

Applied Standard : FCC Part 15, Subpart C 15.247, RSS-247					
FCC Part Section(s)	RSS Section(s)	Test Description	Limit	Test Result	Reference
15.247(b)(1)	RSS-247 [5.4(2)]	Maximum Peak Output Power	< 1 Watt if ≥ 75 non-overlapping channels used	PASS	Section 3.2
15.247(a)(1)	RSS-247 [5.1(2)]	Carrier Frequency Separation	> 2/3 of 20 dB BW for systems with Output Power < 125 mW	PASS	Section 3.3
15.247(a)(1)(iii)	RSS-247 [5.1(1)]	20 dB Channel Bandwidth	N/A	PASS	Section 2.5
-	-	Occupied Bandwidth (99 % Bandwidth)	N/A	PASS	Section 2.5
15.247(a)(1)(iii)	RSS-247 [5.1(4)]	Number of Hopping Channels	> 15 Channels	PASS	Section 3.4
15.247(a)(1)(iii)	RSS-247 [5.1(4)]	Time of Occupancy (Dwell Time)	< 0.4 sec in 31.6 sec period	PASS	Section 3.5
15.247(d)	RSS-247 [5.5]	Band Edge / Out-of-Band Emissions (Conducted Spurious Emission)	> 20 dBc	PASS	Section 3.6
15.205 15.209	RSS-Gen [8.9]	General Field Strength Limits (Restricted Bands and Radiated Emission Limits)	Emissions in Restricted bands must meet the radiated limits detailed in 15.209 (RSS-247 limits)	PASS	Section 3.6
15.207	RSS-Gen [8.8]	AC Conducted Emissions (150 kHz – 30 MHz)	< FCC 15.207 limits (RSS-Gen [8.8] limits)	PASS	Section 3.7

NOTES

- 1) The general test methods used to test on this devices are ANSI C63.10.
- 2) If The Frequency Hopping System operating in 2400-2483.5MHz band and the output power less than 125mW. The hopping channel carrier frequencies separated by a minimum of 25kHz or two-thirds of the 20dB bandwidth of hopping channel whichever is greater.
- 3) Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

1.1 Decision Rules for Statement of Conformity

QUA-52 Decision Rule(QA Document) was applied.

Step 1) : Reference Check, Daily Check, Peripheral device Check

Step 2) : Re-test Procedure (Repeat the test maximum 3 times, Different Test Engineer)

- 1) If the original test results are subject to retesting and the judgement is unclear, the retest is carried out.
- 2) If the result of the first retest is the same as the initial test, the judgement is made based on the value.
- 3) If the result of the first retest differ from the results of the initial test, the second re-test is carried out.
- 4) After completion of the second retest, the average of the three test results is determined as the final result. However, if the deviation of the three test values is more than 5 % of the reference value, the technical manager should review the reproducibility of the test from the beginning.

1.2 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2

Measurement Items	Frequency Range	Expanded Uncertainty $U = kU_c (k = 2)$
Conducted Emissions at main ports	150 kHz – 30 MHz	2.99
Radiated Spurious Emissions	9 kHz – 30 MHz	1.92
	30 MHz – 1 GHz	4.00
	1 GHz – 18 GHz	5.68
	18 GHz – 26.5 GHz	5.24

This uncertainty represents an expanded uncertainty expressed at approximately the 95 % confidence level using a coverage factor of $k = 2$.

2 General Information

2.1 General Description of EUT

Product	Smart Wearable
Brand	Samsung
Model	SM-R875U (Alt. SM-R875F) for FCC ID : A3LSMR875
Identification No. of EUT	-
Series Model	SM-R875F for IC No. : 649E-SMR8751
HVIN	SM-R875F1
Model Difference	-
Power Supply	DC 3.88 V
Modulation Type	GFSK, $\pi/4$ DQPSK, 8DPSK
Transfer Rate	1 Mbps(BDR) / 2 Mbps, 3 Mbps(EDR)
Operating Frequency	2 402 to 2 480 MHz
Number of Channel	79 Channels
Output Power	16.37 dBm (43.35 mW)
Antenna Type	LDS Antenna
Antenna Connector	Internal
H/W Version	REV1.0
S/W Version	R875U.001(SM-R875U), R875F.001(SM-R875F)
Test device Information	Model : SM-R875U Serial number - Conducted(R3AR400CDNM, 41000837e49a4861), Radiated(R3AR400CDEH, R3AR400CD5P, R3AR400CDAR, R3AR400CDDX)

NOTES

1) The above equipment has been tested by **Bureau Veritas Consumer Products Services ADT Korea**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's RF characteristics under the conditions specified in this report.

2) The following antennas were provided to the EUT

Antenna	Type	Connector	Peak Gain (dBi)				
			2.4 GHz	U-NII-1	U-NII-2A	U-NII-2C	U-NII-3
Bluetooth/ Wi-Fi	LDS Antenna	Internal	-7.7	-9.2	-7.3	-8.1	-7.6

3) Spurious emission of the simultaneous operation and the test data please refer to report no. FCCBVCO-WAY-P21090030-3 (U-NII Test Report).

4) **List of Accessories**

Accessories	Brand	Model	Manufacturer	Specification
Wireless Charger	Samsung	EP-OR825	Samsung	FCC ID : A3LEPOR825/ IC : 649E-EPOR825

2.2 Description of Test Mode

[Test Channel of EUT]

2.2.1 Test Mode Applicability and Tested Channel Details

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, XYZ axis and antenna ports. All Radiated emission tests have been performed two mode(with charger and without charger). The worst case was found when positioned on Y axis and without charger mode for radiated emission. Following channel(s) was(were) selected for the final test as listed below :

EUT Configure mode	Applicable to				Description
	RE < 1G	RE ≥ 1G	PLC	APCM	
Without Charger	√	√	-	√	-
With Charger	-	-	√	-	-

Where RE ≥ 1 G : Radiated Emission above 1 GHz & Bandedge Measurement
 RE < 1 G : Radiated Emission below 1 GHz
 PLC : Power Line Conducted Emission
 APCM : Antenna Port Conducted Measurement

Radiated Emission Test (Below 1 GHz)

- Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, XYZ axis, antenna ports (if EUT with antenna diversity architecture) and packet type.
- Following channel(s) was (were) selected for the final test as listed below.

Available Channel	Tested Channel	Modulation Type	Packet Type
0 to 78	19	GFSK	DH3

NOTES

According to exploratory test no any obvious emission were detected from 9 khz to 30 MHz.
 Although these tests were performed other than open field site, adequate comparison measurements were confirmed against 30 m open field site. Therefore sufficient tests were made to demonstrate that the alternative site produces results that correlate with the ones of tests made in an open field based on KDB 414788.

Radiated Emission Test (Above 1 GHz)

- Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, XYZ axis, antenna ports (if EUT with antenna diversity architecture) and packet type.
- Following channel(s) was (were) selected for the final test as listed below.

Available Channel	Tested Channel	Modulation Type	Packet Type
0 to 78	0, 39, 78	GFSK	DH3
0 to 78	0, 39, 78	8DPSK	3-DH3

Radiated Emission Test (Above 18 GHz)

- Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, XYZ axis, antenna ports (if EUT with antenna diversity architecture) and packet type.
- Following channel(s) was (were) selected for the final test as listed below.

Available Channel	Tested Channel	Modulation Type	Packet Type
0 to 78	19	GFSK	DH3

Power line Conducted Emission Test

- Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, XYZ axis, antenna ports (if EUT with antenna diversity architecture) and packet type.
- Following channel(s) was (were) selected for the final test as listed below.

Available Channel	Tested Channel	Modulation Type	Packet Type
0 to 78	19	GFSK	DH3

Antenna Port Conducted Measurement

- This item includes all test value of each mode, but only includes spectrum plot of worst value of each mode.
- Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, antenna ports (if EUT with antenna diversity architecture), and packet types.
- Following channel(s) was (were) selected for the final test as listed below.

Available Channel	Tested Channel	Modulation Type	Packet Type
0 to 78	0, 39, 78	GFSK	ALL
0 to 78	0, 39, 78	$\pi/4$ DQPSK	ALL
0 to 78	0, 39, 78	8DPSK	ALL

Test Condition

Applicable to	Environmental Conditions	Test Voltage	Tested by
RE < 1G	22 °C, 48 % RH	DC 3.88 V	Donghwa Shin
RE ≥ 1G	22 °C, 50 % RH	DC 3.88 V	Donghwa Shin
PLC	23 °C, 47 % RH	DC 3.88 V	Donghwa Shin
APCM	22 °C, 46 % RH	DC 3.88 V	Donghwa Shin

2.3 Maximum Output Power

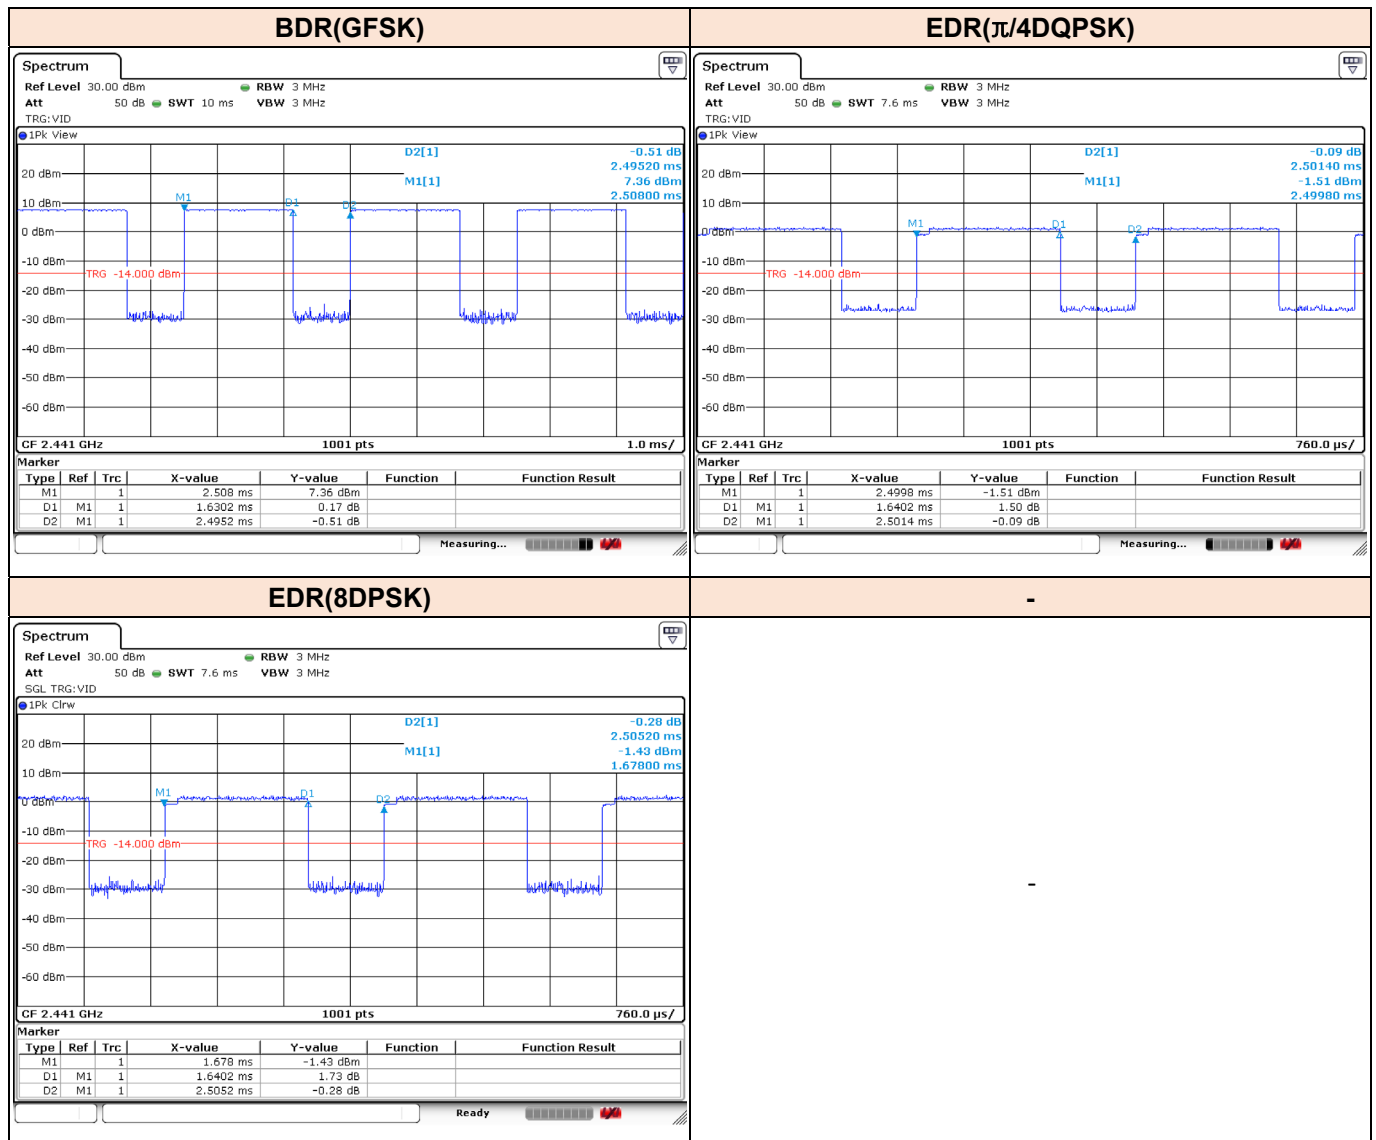

Frequency Range [MHz]	Test Items	Test Mode	Result [dBm]	Result [mW]
2 402 - 2 480	Average Power	BDR(GFSK)	15.88	38.71
		EDR(π /4DQPSK)	8.00	6.31
		EDR(8DPSK)	8.42	6.95
	Peak Power	BDR(GFSK)	16.37	43.35
		EDR(π /4DQPSK)	11.31	13.52
		EDR(8DPSK)	11.35	13.65

2.4 Duty Cycle of Test Signal

Test Mode	Test Items	Packet Type	On Time B [msec]	Period [msec]	Duty Cycle X [Linear]	Duty Cycle [%]	DCF [dB]
BDR(GFSK)	Duty Cycle	DH3	1.630	2.495	0.653	65.3	1.85
EDR(π /4DQPSK)	Duty Cycle	2-DH3	1.640	2.501	0.656	65.6	1.83
EDR(8DPSK)	Duty Cycle	3-DH3	1.640	2.505	0.655	65.5	1.84

Test Plot of Duty Cycle

2.5 20 dB and 99 % Bandwidth

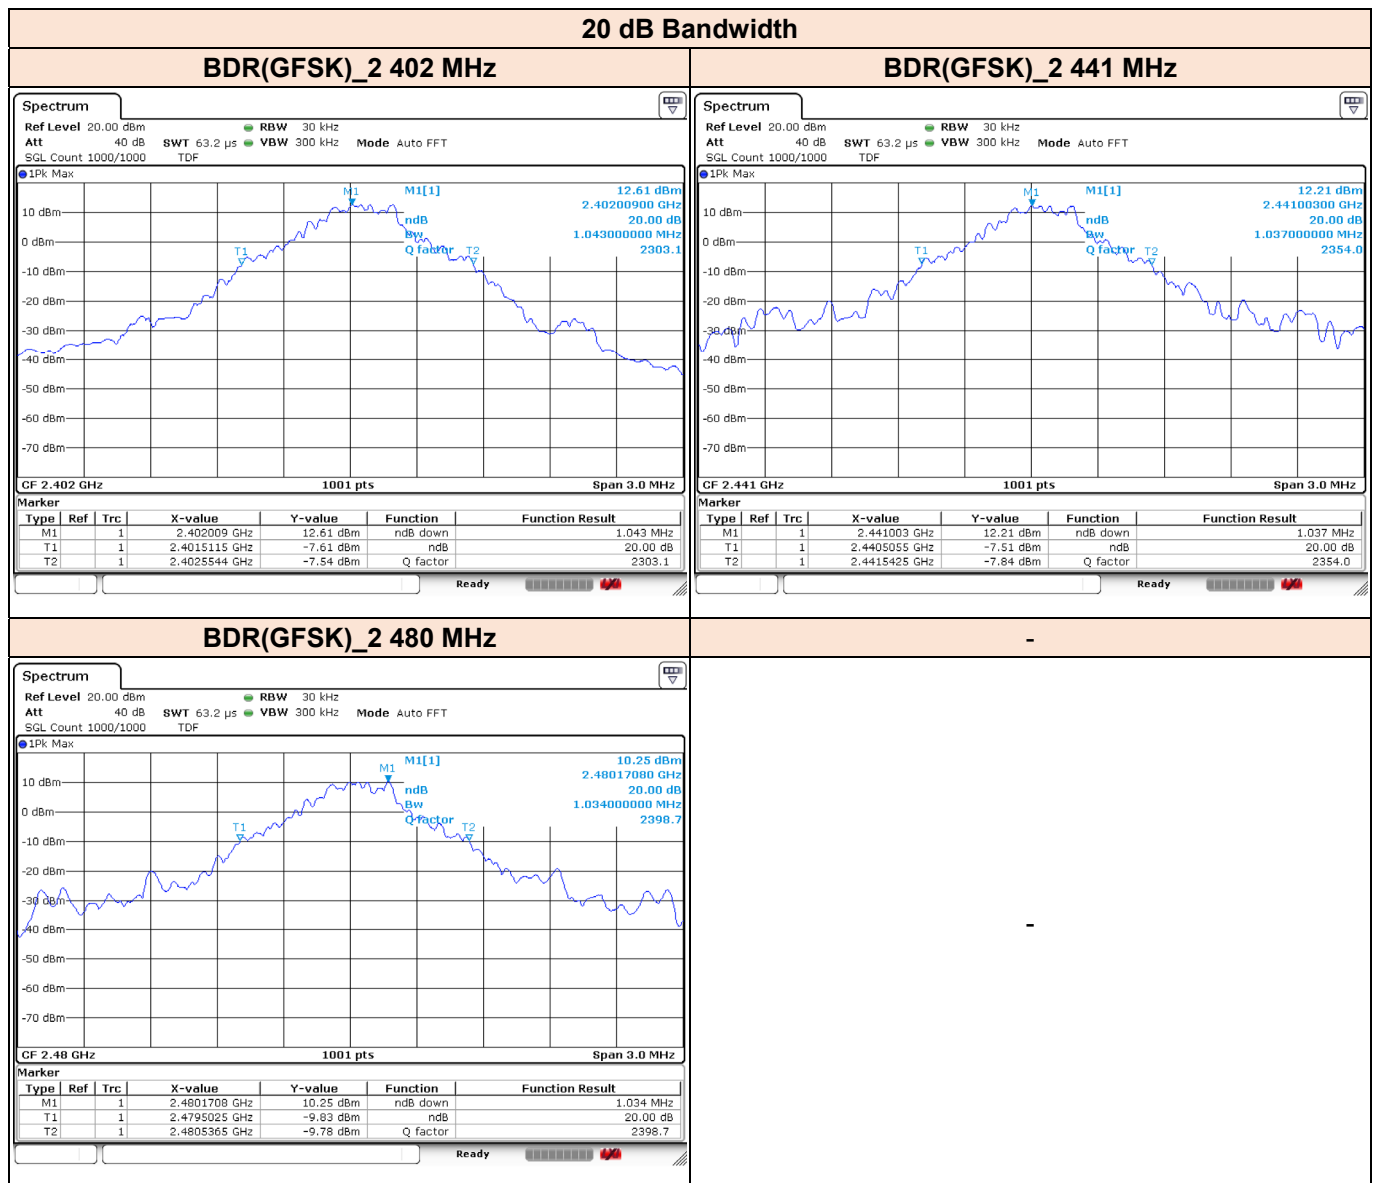

[Test Data of 20 dB Bandwidth and 99 % Bandwidth]

Test Mode	Channel	Frequency [MHz]	20 dB BW [MHz]	99 BW [MHz]
BDR(GFSK)	Lowest	2 402	1.043	0.926
	Middle	2 441	1.037	0.908
	Highest	2 480	1.034	0.905
Worst Result			1.043	0.926
EDR(π /4DQPSK)	Lowest	2 402	1.355	1.205
	Middle	2 441	1.352	1.208
	Highest	2 480	1.352	1.208

2.6 General Description of Applied Standards

The EUT is a RF Product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards.

FCC CFR 47 Part 15, Subpart C (§15.247)

KDB 558074 D01 15.247 Meas Guidance v05r02

ANSI C63.10-2013

RSS-247 Issue 2

RSS-GEN Issue 5

All test items in this test report have been performed and recorded as per the above standards.

2.7 Test Equipment

Test Equipment is traceable to the National Institute of Standards and Technology (NIST). Measurement antenna used during testing were calibrated in accordance to the requirements of ANSI C63.5-2017.

Manufacturer	Model	Description	Serial Number	Cal Date	Cal Due
R&S	HFH2-Z2E	Active Loop Antenna, 30 MHz	349806	2021.02.18	2023.02.18

3 Test Results

3.1 Antenna Requirement

Except from §15.203 of the FCC Rules/Regulations:

An intentional radiator antenna shall be designed to ensure that no antenna other than that furnished by the responsible party can be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of the section.

- The antenna(s) of the EUT are Permanently attached.
- There are no provisions for connection to an external antenna.

Result

The EUT complies with the requirement of §15.203

3.2 Maximum Peak Output Power

3.2.1 Regulation

§15.247(a)(1) : Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

§15.247(b)(1) : For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 non-overlapping hopping channels, and all frequency hopping systems in the 5725-5850 MHz band: 1 watt. For all other frequency hopping systems in the 2400-2483.5 MHz band: 0.125 watts.

§15.247(b)(4) : The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

3.2.2 Test Procedure

The method of measurement used to test this FHSS device is ANSI C63.10-2013.

This is an RF conducted test to evaluate maximum peak output power. Use a direct connection between the antenna port of the unlicensed wireless device and the spectrum analyzer, through suitable attenuation.

- a) Use the following spectrum analyzer settings:

Peak Power Measurement

- 1) Span : Approximately five times the 20 dB bandwidth, centered on hopping channel.
 - 2) RBW > 20 dB bandwidth of emission being measured.
 - 3) VBW \geq RBW.
 - 4) Sweep : Auto.
 - 5) Detector function : Peak.
 - 6) Trace : Max hold.
- b) Allow trace to stabilize
 - c) Use the marker-to-peak function to set the marker to the peak of the emissions
 - d) The indicated level is the peak output power, after any corrections for external attenuators and cables.
 - e) A plot of the test results and setup description shall be included in the test report.

Average Power Measurement

Measurement using a power meter.

a) Average Power measurement using an RF average power meter, as follows:

- 1) The EUT is configured to transmit continuously, or to transmit with a constant duty cycle.
- 2) At all times when the EUT is transmitting, it shall be transmitting at its maximum power control level.
- 3) The integration period of the power meter exceeds the repetition period of the transmitted signal by at least a factor of five.

b) If the transmitter does not transmit continuously, measure the duty cycle, D, of the transmitter output signal.

c) Measure the average power of the transmitter.

This measurement is an average over both the ON and OFF periods of the transmitter.

d) Correct the measurement in dBm by adding $[10 \log (1 / D)]$, where D is the duty cycle.

Please refer D value at page 11 2.4 Duty cycle of test signal.

3.2.3 Deviation from Test Standard

No deviation.

3.2.4 Test Setup

EDR(8DPSK)_2 480 MHz

3.3 Carrier Frequency Separation

3.3.1 Regulation

§15.247(a)(1) : Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

3.3.2 Test Procedure

The method of measurement used to test this FHSS device is ANSI C63.10-2013.

- a) The EUT shall have its hopping function enabled. Use the following spectrum analyzer settings:
- b) Span: Wide enough to capture the peaks of two adjacent channels.
- c) RBW: Start with the RBW set to approximately 30% of the channel spacing; adjust as necessary to best identify the center of each individual channel.
- d) Video (or average) bandwidth (VBW) \geq RBW.
- e) Sweep: Auto.
- f) Detector function: Peak.
- g) Trace: Max hold.
- h) Allow the trace to stabilize.
- i) Use the marker-delta function to determine the separation between the peaks of the adjacent channels. Compliance of an EUT with the appropriate regulatory limit shall be determined. A plot of the data shall be included in the test report.

3.3.3 Deviation from Test Standard

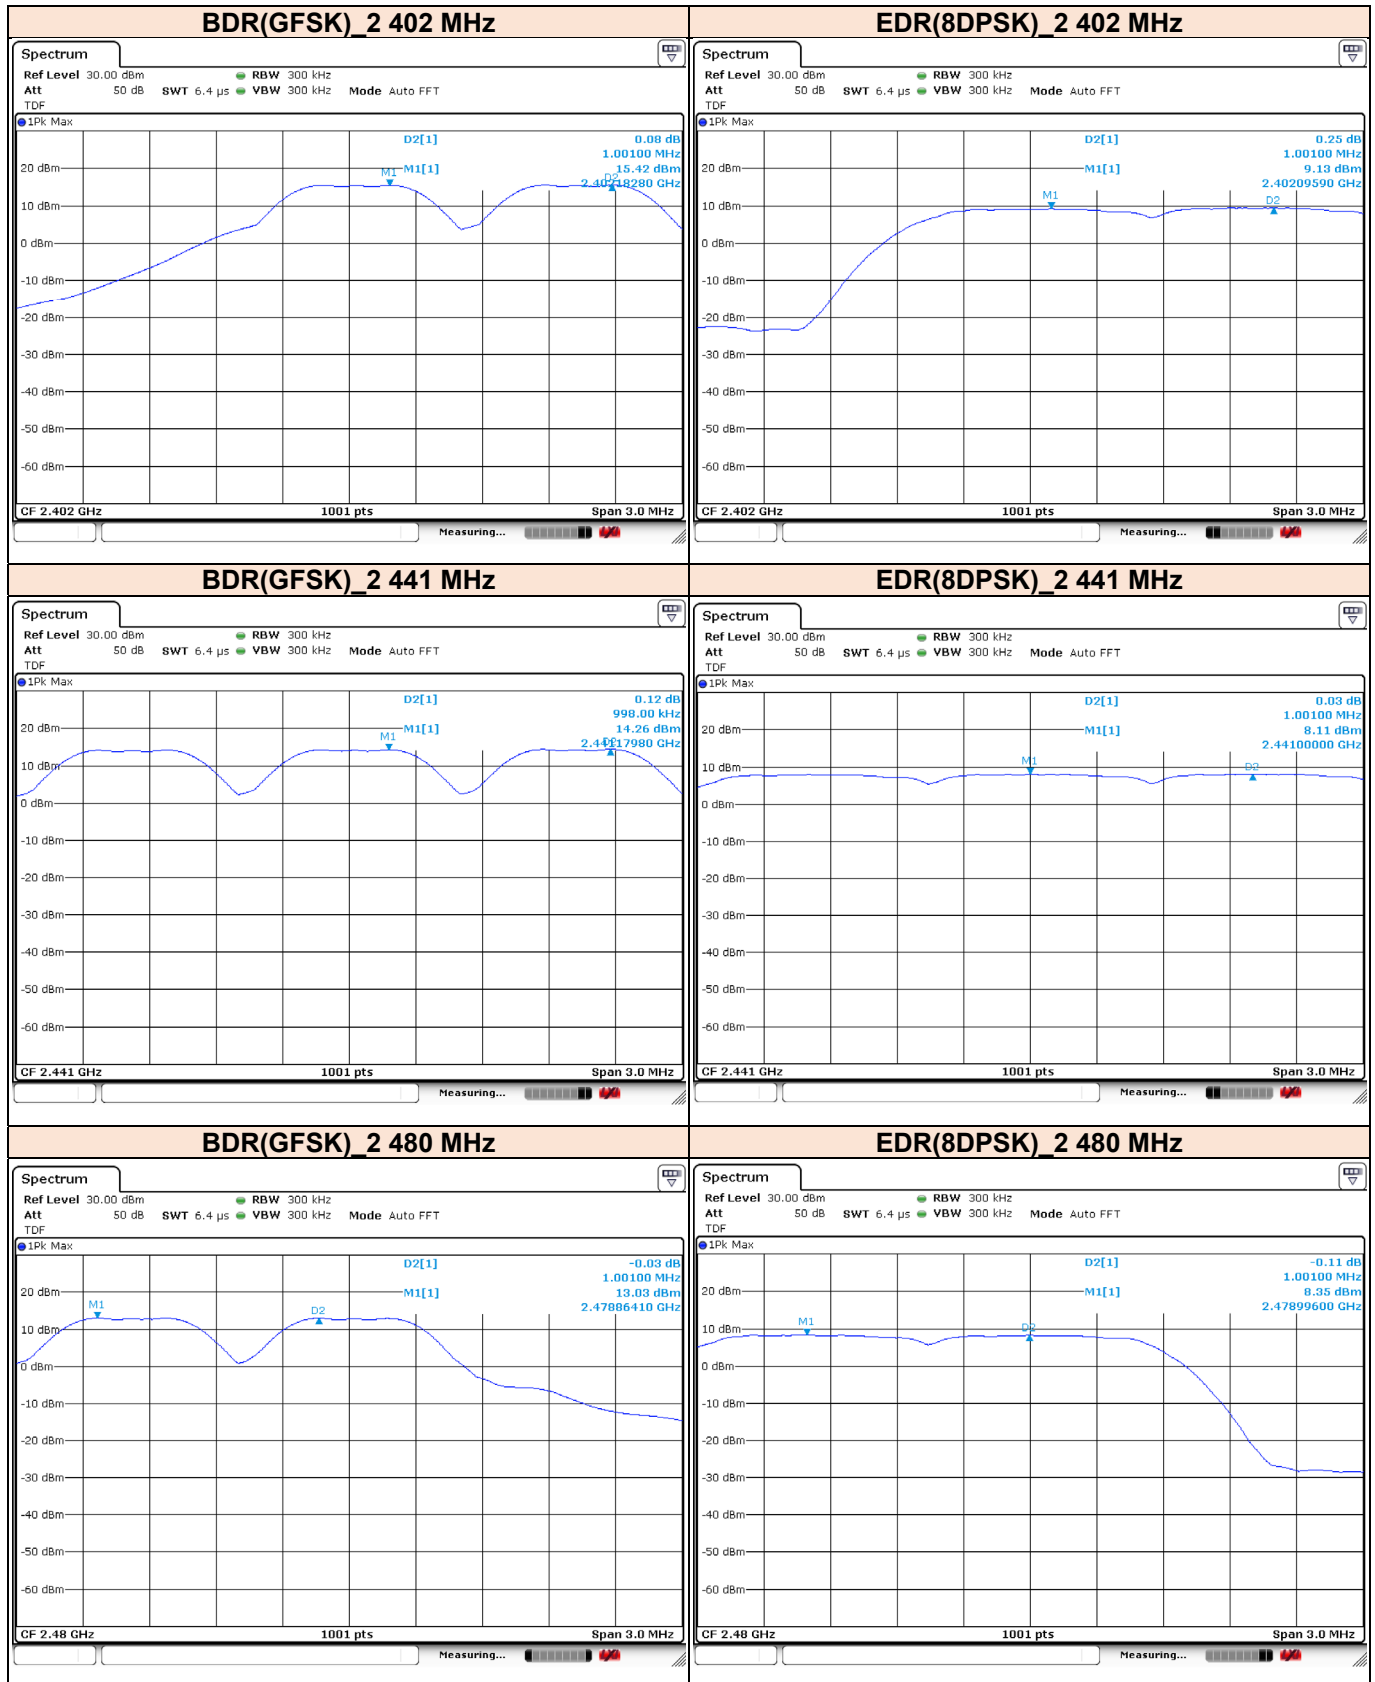

No deviation.

3.3.4 Test Setup

3.3.5 Test Result

3.4 Number of Hopping Channels

3.4.1 Regulation

§15.247(a)(1)(iii) : Frequency hopping systems in the 2400-2483.5 MHz band shall use at least 15 channels. The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed. Frequency hopping systems may avoid or suppress transmissions on a particular hopping frequency provided that a minimum of 15 channels are used.

§15.247(b)(1) : For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 non-overlapping hopping channels, and all frequency hopping systems in the 5725-5850 MHz band: 1 watt. For all other frequency hopping systems in the 2400-2483.5 MHz band: 0.125 watts.

3.4.2 Test Procedure

The method of measurement used to test this FHSS device is ANSI C63.10-2013.

The EUT shall have its hopping function enabled. Use the following spectrum analyzer settings:

- a) Span: The frequency band of operation. Depending on the number of channels the device supports, it may be necessary to divide the frequency range of operation across multiple spans, to allow the individual channels to be clearly seen.
- b) RBW: To identify clearly the individual channels, set the RBW to less than 30% of the channel spacing or the 20 dB bandwidth, whichever is smaller.
- c) VBW \geq RBW.
- d) Sweep: Auto.
- e) Detector function: Peak.
- f) Trace: Max hold.
- g) Allow the trace to stabilize.

It might prove necessary to break the span up into subranges to show clearly all of the hopping frequencies. Compliance of an EUT with the appropriate regulatory limit shall be determined for the number of hopping channels. A plot of the data shall be included in the test report.

3.4.3 Deviation from Test Standard

No deviation.

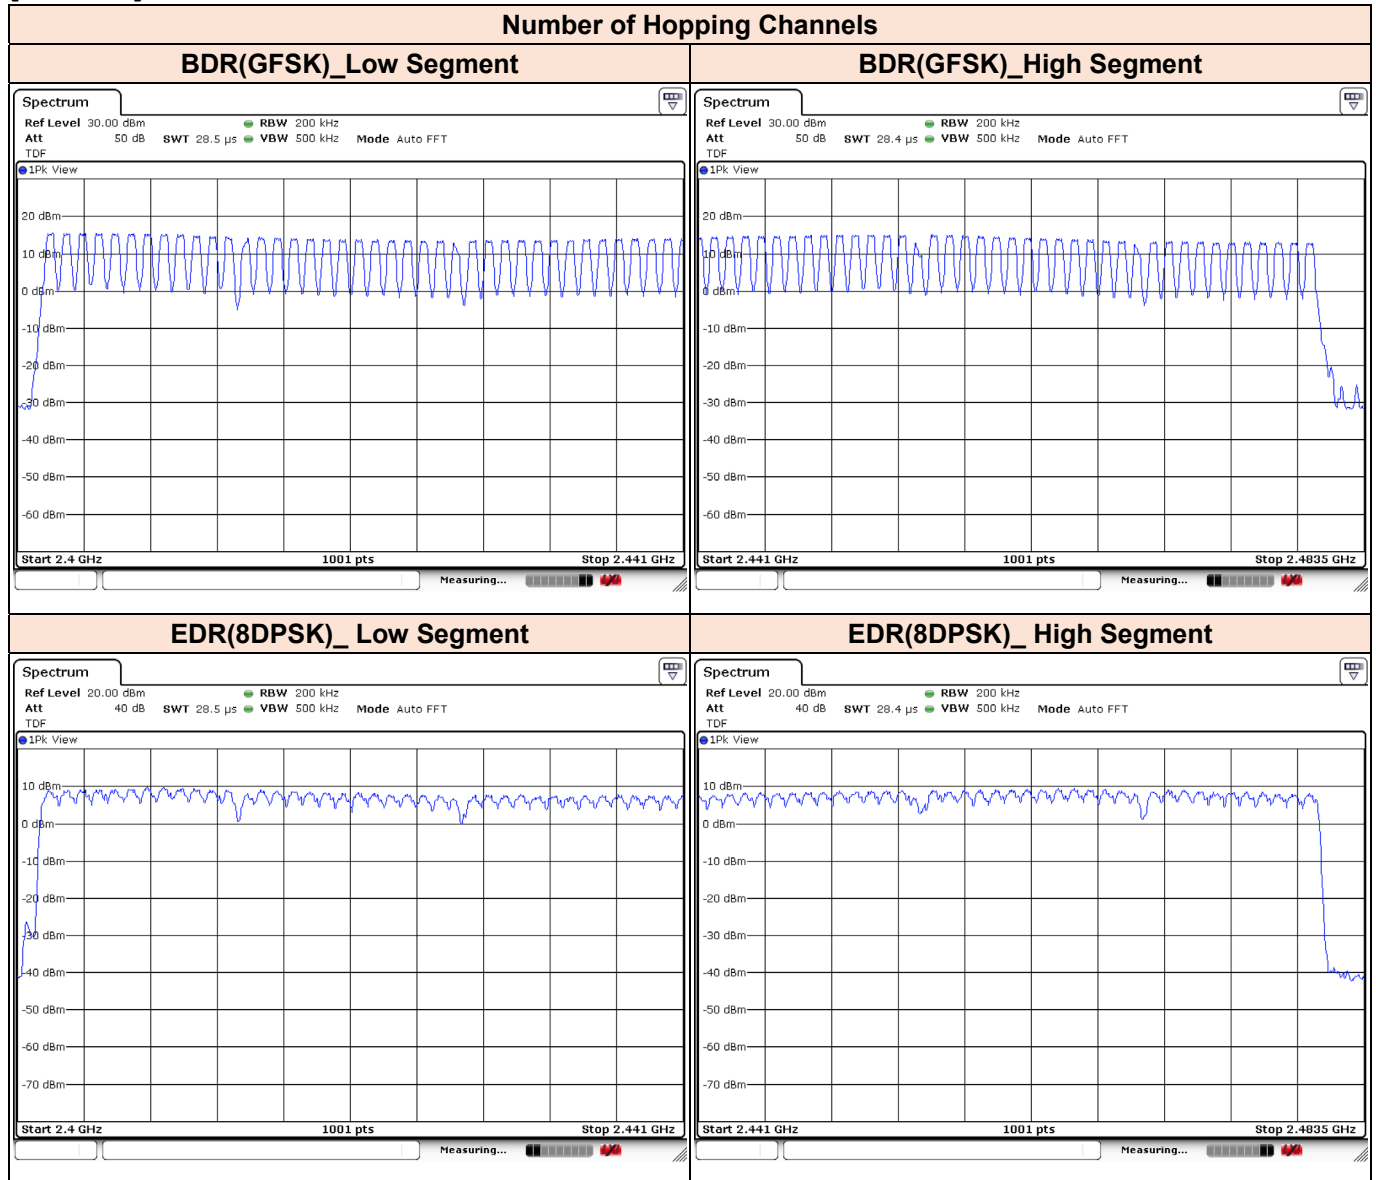

3.4.4 Test Setup

3.4.5 Test Result

[Test Plot]

3.5 Time of Occupancy (Dwell Time)

3.5.1 Regulation

§15.247(a)(1)(iii) : Frequency hopping systems in the 2400-2483.5 MHz band shall use at least 15 channels. The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed. Frequency hopping systems may avoid or suppress transmissions on a particular hopping frequency provided that a minimum of 15 channels are used.

3.5.2 Test Procedure

The method of measurement used to test this FHSS device is ANSI C63.10-2013.

The EUT shall have its hopping function enabled. Use the following spectrum analyzer settings:

- a) Span: Zero span, centered on a hopping channel.
- b) RBW shall be \leq channel spacing and where possible RBW should be set $\gg 1 / T$, where T is the expected dwell time per channel.
- c) Sweep: As necessary to capture the entire dwell time per hopping channel; where possible use a video trigger and trigger delay so that the transmitted signal starts a little to the right of the start of the plot. The trigger level might need slight adjustment to prevent triggering when the system hops on an adjacent channel; a second plot might be needed with a longer sweep time to show two successive hops on a channel.
- d) Detector function: Peak.
- e) Trace: Max hold.

Use the marker-delta function to determine the transmit time per hop. If this value varies with different modes of operation (data rate, modulation format, number of hopping channels, etc.), then repeat this test for each variation in transmit time.

Repeat the measurement using a longer sweep time to determine the number of hops over the period specified in the requirements. The sweep time shall be equal to, or less than, the period specified in the requirements. Determine the number of hops over the sweep time and calculate the total number of hops in the period specified in the requirements, using the following equation:

$$\begin{aligned} & \text{(Number of hops in the period specified in the requirements)} = \\ & \text{(number of hops on spectrum analyzer)} \times \text{(period specified in the requirements / analyzer sweep time)} \end{aligned}$$

The average time of occupancy is calculated from the transmit time per hop multiplied by the number of hops in the period specified in the requirements. If the number of hops in a specific time varies with different modes of operation (data rate, modulation format, number of hopping channels, etc.), then repeat this test for each variation.

The measured transmit time and time between hops shall be consistent with the values described in the operational description for the EUT.

3.5.3 Deviation from Test Standard

No deviation.

3.5.4 Test Setup
