## **REPORT REVISION HISTORY**

Date	Revision	Page No
2023-05-19	Originally issued	-

This report shall not be reproduced except in full, without the written approval of Eurofins KCTL Co.,Ltd. This document may be altered or revised by Eurofins KCTL Co.,Ltd. Personnel only, and shall be noted in the revision section of the document. Any alteration of this document not carried out by Eurofins KCTL Co.,Ltd. Will constitute fraud and shall nullify the document. This test report is a general report that does not use the KOLAS accreditation mark and is not related to KS Q ISO/IEC 17025 and KOLAS accreditation.

## General remarks for test reports

Statement concerning the uncertainty of the measurement systems used for the tests

(may be required by the product standard or client)

Internal procedure used for type testing through which traceability of the measuring uncertainty has been established:

## Procedure number, issue date and title:

Calculations leading to the reported values are on file with the testing laboratory that conducted the testing.

Statement not required by the standard or client used for type testing

	KOLAS No.: KT231

## 2. Device information

Equipment under test Model	:	Smart wearable SM-R930
	•	
Modulation technique		OFDM [WIFI(802.11a/n)]
Number of channels		UNII-1 : 4 ch (20 Mb)
		UNII-2A : 4 ch (20 Mz)
		UNII-2C : 12 ch (20 Mz)
		UNII-3 : 5 ch (20 Mz)
Power source	:	DC 3.88 V
Antenna specification	:	LDS Antenna
Antenna gain	:	UNII-1 : -3.80 dBi
		UNII-2A : -4.10 dBi
		UNII-2C : -3.60 dBi
		UNII-3 : -3.60 dBi
Frequency range		UNII-1 : 5 180 <sup>Mb</sup> ~ 5 240 <sup>Mb</sup> (802.11a/n_HT20)
		UNII-2A : 5 260 Mz ~ 5 320 Mz (802.11a/n_HT20)
		UNII-2C : 5 500 Mz ~ 5 720 Mz (802.11a/n_HT20)
		UNII-3 : 5 745 ₩z ~ 5 825 ₩z (802.11a/n_HT20)
Software version	:	R930.001
Hardware version	:	REV1.0
Test device serial No.	:	Conducted : R3AW200HS6E
Operation temperature		-20 °C ~ 50 °C
operation temperature	•	20 0 00 0

65, Sinwon-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do, 16677, Korea TEL: 82-70-5008-1021 FAX: 82-505-299-8311 www.kctl.co.kr Report No.: KR23-SRF0128 Page (5) of (16)

2.1. Accessory information					
Equipment	Manufacturer	Model	Serial No.	Power source	FCC ID & IC
Wireless charger	Samsung Electronics Co., Ltd.	EP-OR900	-	5.0 V, 2.0 A	FCC ID : A3LEPOR900 IC : 649E-EPOR900

## 2.2. Frequency/channel operations

This device contains the following capabilities: WLAN (11a/b/g/n), Bluetooth (BDR/EDR/BLE)

## UNII-2A

# UNII-2C

Ch.	Frequency ( <sup>MHz</sup> )
52	5 260
56	5 280
64	5 320

Ch.	Frequency ( <sup>MH</sup> z)	
100	5 500	
120	5 600	
140	5 700	
144	5 720	

Table 2.2.1. 802.11a/n\_HT20 mode

## Notes:

1. The device supports DFS bands between UNII-2A and UNII-2C and operates as a slave device controlled by master.

65, Sinwon-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do, 16677, Korea TEL: 82-70-5008-1021 FAX: 82-505-299-8311 www.kctl.co.kr Report No.: KR23-SRF0128 Page (6) of (16)

3. Sum	mary of tests		
FCC Part section(s		Parameter	Test results
15.407(h)	RSS-247 Issue 2, 6.3	DFS -Channel closing transmission time -Channel move time -Non occupied period	Pass

## Notes:

- 1. The test procedure(s) in this report were performed in accordance as following.
  - KDB 905462 D02 UNII DFS compliance procedure new rules.
  - KDB 905462 D03 UNII client without radar detection new rules.
- 2. The device does not support radar detection feature.

65, Sinwon-ro, Yeongtong-gu, Suwon-si, Gyeonggi-do, 16677, Korea TEL: 82-70-5008-1021 FAX: 82-505-299-8311 www.kctl.co.kr

# 4 Test results 4.1. DFS (Dynamic Frequency Selection)

## Test description

## - Applicability of DFS requirements prior to use of a channel

	Operational Mode			
Requirement	Master	Client (without radar detection)	Client (with radar detection)	
Non-Occupancy Period	Yes	Not required	Yes	
DFS Detection Threshold	Yes	Not required	Yes	
Channel Availability Check Time	Yes	Not required	Not required	
U-NII Detection Bandwidth	Yes	Not required	Yes	

## - Applicability of DFS requirements during normal operation

	Operational Mode			
Requirement	Master Device or Client with Radar Detection	Client Without Radar Detection		
DFS Detection Threshold	Yes	Not required		
Channel Closing Transmission Time	Yes	Yes		
Channel Move Time	Yes	Yes		
Bandwidth	Yes	Not required		

Additional requirements for devices with multiple bandwidth modes	Master Device or Client with Radar Detection	Client Without Radar Detection		
U-NII Detection Bandwidth and Statistical Performance Check	All BW modes must be tested	Not required		
Channel Move Time and Channel Closing Transmission Time	Test using widest BW mode available	Test using the widest BW mode available for the link		
All other tests	Any single BW mode	Not required		
<b>Note:</b> Frequencies selected for statistical performance check (Section 7.8.4) should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection bandwidth. For 802.11 devices it is suggested to select frequencies in each of				

the bonded 20 MHz channels and the channel center frequency.

## - Requirements of client devices

a) A Client Device will not transmit before having received appropriate control signals from a Master Device.

b) A Client Device will stop all its transmissions whenever instructed by a Master Device to which it is associated and will meet the Channel Move Time and Channel Closing Transmission Time requirements. The Client Device will not resume any transmissions until it has again received control signals from a Master Device.

c) If a Client Device is performing In-Service Monitoring and detects a Radar Waveform above the DFS Detection Threshold, it will inform the Master Device. This is equivalent to the Master Device detecting the Radar Waveform and d) through f) of section 5.1.1 apply.

d) Irrespective of Client Device or Master Device detection the Channel Move Time and Channel Closing Transmission Time requirements remain the same.

e) The client test frequency must be monitored to ensure no transmission of any type has occurred for 30 minutes. Note: If the client moves with the master, the device is considered compliant if nothing appears in the client non-occupancy

## - DFS Response requirement values

Parameter	Value			
Non-occupancy period	Minimum 3 <mark>0 minut</mark> es			
Channel Availability Check Time	60 seconds			
Channel Move Time	10 seconds See Note 1.			
Channel Closing Transmission Time	200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second period. See Notes 1 and 2.			

Note 1: Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst.

Note 2: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.

KCTL

Maximum Transmit Power	Value (see note)				
<u>≥ 200 milliwatt</u>	<u>-64</u> dBm				
< 200 milliwatt	60 dBm				
power spectral density < 10 dBm/MHz	-62 d <sup>B</sup> m				
EIRP < 200 milliwatt that do not meet the power spectral	-64 dBm				
density requirement	-04 00111				
Note 1: This is the level at the input of the receiver assuming a 0 $^{ m dB}$ i receive antenna					
Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of					
the test transmission waveforms to account for variations in measurement equipment. This will					
ensure that the test signal is at or above the detection threshold level to trigger a DFS response.					
Note3: EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publicatior					
662911 D01.					

## - Radar test waveforms

Туре	Pulse Width (µsec)	PRI (µs <mark>ec)</mark>	Number of Pulses	Minimum Percentage of Successful Detection	Minimum Number of Trials

## <u>Test setup</u>

## - Setup for Client with injection at the Master

## - Spectrum analyzer setting parameter

This setting parameter is shown below and it according to the 905462 D02 UNII DFS Compliance Procedures New Rules.

- 1) RBW/VBW ≥ 3 Mtz
- 2) Detector = peak
- 3) Span = zero span

## - Conducted test procedure

- 1) One frequency will be chosen from the Operating Channels of the UUT within the 5 250-5 350 Mi₂ or 5 470-5 725 Mi₂ bands.
- 2) The Client Device (EUT) is set up the above diagram and communications between the Master device and the Client is established.
- 3) Stream the channel loading test file from the Master Device to the Client Device on the test Channel for the entire period of the test.
- 4) An additional 1 dB is added to the radar test signal to ensure it is at or above the DFS Detection Threshold, accounting for equipment variations/errors.
- 5) Observe the transmissions of the UUT at the end of the Burst on the Operating Channel for duration greater than 12 seconds for Radar Type 0 to ensure detection occurs.
- 6) After the initial radar burst the channel is monitored for 30 minutes to ensure no transmissions or beacons occur. A second monitoring setup is used to verify that the Master and Client have both moved to different channels.
