# PART 0 SAR CHAR REPORT

#### Applicant Name:

Samsung Electronics Co., Ltd. 129, Samsung-ro, Maetan dong, Yeongtong-gu, Suwon-si Gyeonggi-do, 16677, Korea Date of Testing: 12/13/22 – 01/18/23 Test Site/Location: Element, Columbia, MD, USA Document Serial No.: 1M2212080136-20.A3L (Rev1)

# A3LSMS911JPN

**APPLICANT:** 

FCC ID:

# SAMSUNG ELECTRONICS CO., LTD

Report Type: DUT Type: Model(s): Part 0 SAR Characterization Portable Handset SC-51D, SCG19

I attest to the accuracy of data. All measurements reported herein were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

Note: This revised Test Report supersedes and replaces the previously issued test report on the same subject device for the same type of testing as indicated. Please discard or destroy the previously issued test report(s) and dispose of it accordingly.

Test results reported herein relate only to the item(s) tested.

RJ Ortanez Executive Vice President

# **1** DEVICE UNDER TEST

#### 1.1 Device Overview

This device uses the Qualcomm<sup>®</sup> Gen1 Smart Transmit feature to control and manage transmitting power in real time and to ensure the time-averaged RF exposure is in compliance with the FCC requirement at all times for 2G/3G/4G/5G Sub6 operations. Additionally, this device supports WLAN/BT/NFC technologies, but the output power of these modems is not controlled by the Smart Transmit algorithm.

Band & Mode	Operating Modes	Tx Frequency	
GSM/GPRS/EDGE 850	Voice/Data	824.20 - 848.80 MHz	
GSM/GPRS/EDGE 1900	Voice/Data	1850.20 - 1909.80 MHz	
UMTS 850	Voice/Data	826.40 - 846.60 MHz	
LTE Band 12	Voice/Data	699.7 - 715.3 MHz

## **1.2** Time-Averaging for SAR and Power Density

This device is enabled with Qualcomm<sup>®</sup> Gen1 Smart Transmit algorithm to control and manage transmitting power in real time and to ensure that the time-averaged RF exposure from 2G/3G/4G/5G Sub-6 NR WWAN is in compliance with FCC requirements. This Part 0 report shows SAR characterization of WWAN radios for 2G/3G/4G/5G Sub-6 NR. Characterization is achieved by determining P<sub>Limit</sub> for 2G/3G/4G/5G Sub-6 NR that corresponds to the exposure design targets after accounting for all device design related uncertainties, i.e.,

SAR\_design\_target (< FCC SAR limit) for sub-6 radio. The SAR characterization is denoted as SAR Char in this report. Section 1.3 includes a nomenclature of the specific terms used in this report.

The compliance test under the static transmission scenario and simultaneous transmission analysis are reported in Part 1 report. The validation of the time-averaging algorithm and compliance under the dynamic (time- varying) transmission scenario for WWAN technologies are reported in Part 2 report (report SN could be found in Section 1.4 – Bibliography).

## 1.3 Nomenclature for Part 0 Report

Technology Term		Description

# **2** SAR AND POWER DENSITY MEASUREMENTS

#### 2.1 SAR Definition

Specific Absorption Rate is defined as the time derivative (rate) of the incremental energy (dU) absorbed by (dissipated in) an incremental mass (dm) contained in a volume element (dV) of a given density ( $\rho$ ). It is also defined as the rate of RF energy absorption per unit mass at a point in an absorbing body (see Equation 2-1).

Equation 2-1 SAR Mathematical Equation

SAR =	d	$\left( dU \right)$	_ d	dU
SAK =	dt	$\left(\frac{dm}{dm}\right)$	$-\frac{dt}{dt}$	$\left(\frac{dU}{\rho dv}\right)$
	011	< <i>cumu</i>	ci i	(pur)

#### SAR is expressed in units of Watts per Kilogram (W/kg).

$$SAR = \frac{\sigma \cdot E^2}{\rho}$$

where:

σ	=	conductivity of the tissue-simulating material (S/m)
ρ	=	mass density of the tissue-simulating material (kg/m <sup>3</sup> )
E	=	Total RMS electric field strength (V/m)

NOTE: The primary factors that control rate of energy absorption were found to be the wavelength of the incident field in relation to the dimensions and geometry of the irradiated organism, the orientation of the organism in relation to the polarity of field vectors, the presence of reflecting surfaces, and whether conductive contact is made by the organism with a ground plane.[6]

### 2.2 SAR Measurement Procedure

The evaluation was performed using the following procedure compliant to FCC KDB Publication 865664 D01v01r04 and IEEE 1528-2013:

- 1. The SAR distribution at the exposed side of the head or body was measured at a distance no greater than 5.0 mm from the inner surface of the shell. The area covered the entire dimension of the device-head and body interface and the horizontal grid resolution was determined per FCC KDB Publication 865664 D01v01r04 (See Table 2-1) and IEEE 1528-2013.
- 2. The point SAR measurement was taken at the maximum SAR region determined from Step 1 to enable the monitoring of SAR fluctuations/drifts during the 1g/10g cube evaluation. SAR at this fixed point was measured and used as a reference value.

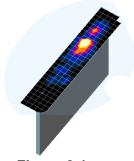

Figure 2-1 Sample SAR Area Scan

 Based on the area scan data, the peak of the region with maximum SAR was determined by spline interpolation. Around this point, a volume was assessed according to the measurement resolution and volume size requirements of FCC KDB Publication 865664 D01v01r04 (See Table 2-1) and IEEE 1528-2013. On the

basis of this data set, the spatial peak SAR value was evaluated with the following procedure (see references or the DASY manual online for more details):

a. SAR values at the inner surface of the phantom are extrapolated from the measured values along the line away from the surface with spacing no greater than that in Table 2-1. The extrapolation was based on a least-squares algorithm. A polynomial of the fourth order was calculated through the points in the z-axis (normal to the phantom shell).

b. After the maximum interpolated values were calculated between the points in the cube, the SAR was averaged over the spatial volume (1g or 10g) using a 3D-Spline interpolation algorithm. The 3D-spline is composed of three one-dimensional splines with the "Not a knot" condition (in x, y, and z directions). The volume was then integrated with the trapezoidal algorithm. One thousand points ( $10 \times 10 \times 10$ ) were obtained through interpolation, in order to calculate the averaged SAR.

c. All neighboring volumes were evaluated until no neighboring volume with a higher average value was found.

4. The SAR reference value, at the same location as step 2, was re-measured after the zoom scan was complete to calculate the SAR drift. If the drift deviated by more than 5%, the SAR test and drift measurements were repeated.

<b>-</b>	Maximum Area Scan Resolution (mm)	Maximum Zoom Scan Resolution (mm)	Maximum Zoom Scan Spatial Resolution (mm)			Minimum Zoom Scan		
Frequency	$(\Delta x_{area}, \Delta y_{area})$	$(\Delta x_{2000}, \Delta y_{2000})$	Uniform Grid	Graded Grid		Volume (mm) (x,y,z)		
	and for foreign		∆z <sub>zoom</sub> (n)	$\Delta z_{zoom}(1)^*$	∆z <sub>zoom</sub> (n>1)*

# **3** SAR CHARACTERIZATION

### 3.1 DSI and SAR Determination

This device uses different Device State Index (DSI) to configure different time averaged power levels based on certain exposure scenarios. Depending on the detection scheme implemented in the smartphone, the worst-case SAR was determined by measurements for the relevant exposure conditions for that DSI. Detailed descriptions of the detection mechanisms are included in the operational description.

When 1g SAR and 10g SAR exposure comparison is needed, the worst-case was determined from SAR normalized to 1g or 10g SAR limit.

The device state index (DSI) conditions used in Table 3-1 represent different exposure scenarios.

DSI and Corresponding Exposure Scenarios								
Scenario	Description	SAR Test Cases						
Head (DSI = 2)	<ul><li>Device positioned next to head</li><li>Receiver Active</li></ul>	Head SAR per KDB Publication 648474 D04						
Hotspot mode (DSI = 3)	<ul> <li>Device transmits in hotspot mode near body</li> <li>Hotspot Mode Active</li> </ul>	Hotspot SAR per KDB Publication 941225 D06						
Phablet Grip (DSI=1 or 4)	<ul> <li>Device is held with hand and grip sensor is triggered</li> <li>Grip sensor triggered or earjack is active</li> </ul>	Phablet SAR per KDB Publication 648474 D04 & KDB Publication 616217 D04						
Phablet (DSI = 0)	<ul> <li>Device is held with hand and grip sensor is not triggered</li> <li>Distance grip sensor not triggered</li> </ul>	Phablet SAR per KDB Publication 648474 D04 & KDB Publication 616217 D04						
Body-worn (DSI = 0)	<ul> <li>Device being used with a body-worn accessory</li> </ul>	Body-worn SAR per KDB Publication 648474 D04						

Table 3-1
DSI and Corresponding Exposure Scenarios

# 3.2 SAR Design Target

*SAR\_design\_target* is determined by ensuring that it is less than FCC SAR limit after accounting for total device designed related uncertainties specified by the manufacturer (see Table 3-2).

Table 3-2

SAR_design_target Calculations							
	SAR_design_target						
$SAR\_design\_target < SAR\_regulatory\_limit \times 10^{\frac{-Total Uncertainty}{10}}$							
1g SAR 10g SAR (W/kg) (W/kg)							
			4.0.10				
Total Uncertainty	1.0 dB	Total Uncertainty	1.0 dB				
	1.0 dB 1.6 W/kg	Total Uncertainty SAR_regulatory_limit	1.0 dB 4.0 W/kg

Document S/N: 1M2212080136-20.A3L (Rev1)	DUT Type: Portable Handset	Page 7 of 10

## 3.3 SAR Char

SAR test results corresponding to *Pmax* for each antenna/technology/band/DSI can be found in Appendix A.

*Plimit* is calculated by linearly scaling with the measured SAR at the Ppart0 to correspond to the *SAR\_design\_target*. When *Plimit < Pmax*, *Ppart0* was used as Plimit in the Smart Transmit EFS. When *Plimit > Pmax* and *Ppart0*=Pmax, calculated *Plimit* was used in the Smart Transmit EFS. All reported SAR obtained from the Ppart0 SAR tests was less than *SAR\_Design\_target* + 1 dB Uncertainty. The final *Plimit* determination for each exposure scenario corresponding to *SAR\_design\_target* are shown in Table 3-3.

Device State Index (DSI)	PLimit Determination Scenarios
0	<ul> <li>The worst-case SAR exposure is determined as maximum SAR normalized to the limit (i.e. lowest <i>P</i><sub>limit</sub>) among:</li> <li>1. Body Worn SAR</li> <li>2. For modes in antenna A and B, extremity SAR measured at 8, 6, 12, and 0 mm spacing for back, front, bottom, right, and left surfaces respectively.</li> <li>2. For modes in antenna F, extremity SAR measured at 0 mm for all surfaces.</li> </ul>
1 or 4	Plimit is calculated based on 10g Extremity SAR at 0 mm for all surfaces
2	Plimit is calculated based on 1g Head SAR
3	P <sub>limit</sub> is calculated based on 1g Hotspot SAR at 10 mm

Table 3-3 PLimit Determination

NR Band n41	F	1	9.0	19.0	15.0	19.0	19.0	24.0

Table 3-4SAR Characterizations

\*Note all  $P_{limit}$  EFS and maximum tune up output power  $P_{max}$  levels entered in above Table correspond to average power levels after accounting for duty cycle in the case of TDD modulation schemes (e.g. GSM and LTE TDD).

#### Notes:

- 1. For all modes/bands, when Hotspot Mode (DSI=3) and Extremity sensor (DSI=1) are triggered at the same time, DSI=3 takes priority, thus the *P*<sub>limit</sub> for DSI=3 is set to be less or equal to *P*<sub>limit</sub> for DSI=1.
- 2. When  $P_{max} < P_{limit}$ , the DUT will operate at a power level up to  $P_{max}$ .
- 3.  $P_{limit}$  for DSI=1 and DSI =4 are the same.

Note:

- CBT (Calibrated Before Testing). Prior to testing, the measurement paths containing a cable, amplifier, attenuator, coupler or filter were connected to a calibrated source (i.e. a signal generator) to determine the losses of the measurement path. The power meter offset was then adjusted to compensate for the measurement system losses. This level offset is stored within the power meter before measurements are made. This calibration verification procedure applies to the system verification and output power measurements. The calibrated reading is then taken directly from the power meter after compensation of the losses for all final power measurements.
- 2. Each equipment item was used solely within its respective calibration period.
