2. Test Result

2.1. Test Setup

2.1.1. Isotropic Probe Test Setup

The measurement probe (EHP-200AC) is a regular hexahedron and supports 3-axis isotropic probe.

- A: Front of measurement probe
- B: Right of measurement probe
- C: Rear of measurement probe
- D: Left of measurement probe
- E: Top of measurement probe

In order to demonstrate the probe perturbation is not affecting the measurements,

- For one of the sides of EUT several measurements be made at various distances, starting further away and then moving closer.
 - ✓ Further away: measurement distance of EUT was confirmed until isotropic probe could not read fundamental level anymore (Not detected level).
- ✓ Moving closer: measurement isotropic probe directly contacts with sides of EUT (0 cm)
- ✓ When the worst level of EUT's sides is found out, several measurements should be checked through various distance (1 cm step).
- At 0 cm distance, measurement isotropic probe was investigated by rotating the probe through various angles for one of the EUT's sides as below.

Measurement Point	Α	В	С	D	E
Direction	Front	Right	Rear	Left	Тор
Measurement Point	A to B	B to C	C to D	D to A	N/A
Direction	Front to Right	Right to Rear	Rear to Left	Left to Front	-
Measurement Point	A to E	B to E	C to E	D to E	N/A
Direction	Front to Top	Right to Top	Rear to Top	Left to Top	-

⁻ When the worst angle among all angles was found, RF exposure measurement should be adjusted from worst angle.

^{*}Bottom of measurement probe is not used to measure RF exposure condition owing to connection with a stick.

2.1.2. EUT Test Setup

2.1.3. Measurement procedure

- a) The RF exposure test was performed in anechoic chamber.
- b) H-field level of WPT (Wireless power transfer) was measured from 0 cm (contact) to possible reading distance (Not detected level) based on EUT's surface.
- c) Measurement was performed on each side of the EUT as described above picture (A, B, C, D, E, F).
- d) The EUT was measured according to the dictates of KDB 680106 D01 RF Exposure Wireless Charging Apps v03.

2.1.4. Operational Correction Factor

The EUT charges of 10 minutes at maximum illumination to full charge. It recharges at maximum illumination when 10 % or more of the battery level drop is detected.

Operational Correction Factor = 10 min / 30 min = 1 / 3

 $\mathsf{RTT5041-19}(2020.03.02)(2) \\ \mathsf{A4}(210\ \mathsf{mm}\times297\ \mathsf{mm})$
