We attest that

@ Test Case : HSDPA / HSUPA Average Max power check

<WCDMA B2>

HSDPA : Subset 3/4 mostly higher than the tune up power with MPR

HSUPA : Subset 1 mostly lower than the tune up power with MPR

<WCDMA B5>

HSDPA : Subset 3,4 mostly higher than the tune up power with MPR

HSUPA : Subset 1,2,3 mostly lower than the tune up power with MPR

<WCDMA B2 Reduced Power>

HSUPA : Subset 1 mostly lower than the tune up power with MPR

Subset 2,4 mostly higher than the tune up power with MPR

HSDPA : Subset 3,4 mostly higher than the tune up power with MPR

LTE : Power are in the Tune-up procedure and complies with the 3GPP.

@ Developer's opinion.

It is expected by manufacturer that MPR for some HSPA subtests may be up to 2dB more than specified by 3GPP, but also as low as 0 dB according to the chipset implementation in this model. The HSPA transmitter power will not exceed the R99 maximum transmit Power in this device

Engineer : Yeongsu Noh
