1.3.2. Identification of all used EUT

The EUT identity consists of numerical and letter characters, the letter character indicates the test sample, and the following two numerical characters indicate the software version of the test sample.

EUT Identity	Hardware Version	Software Version	
1#	P3	ELD50_0.0.15	

1.4. Applied Reference Documents

Leading reference documents for testing:

No.	Identity	Document Title
1 ORLAS	47 CFR§2.1091	Radiofrequency Radiation Exposure Evaluation: mobile devices
2	KDB 447498 D01v06	General RF Exposure Guidance

2. DEVICE CATEGORY AND RF EXPOSURE LIMIT

Per user manual, this device is a Electronic Hours of Service Logging Device. Based on 47CFR 2.1091, this device belongs to mobile device category with General Population/Uncontrolled exposure.

Mobile Devices:

47CFR 2.1091(b)

For purposes of this section, a mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. In this context, the term "fixed location" means that the device is physically secured at one location and is not able to be easily moved to another location. Transmitting devices designed to be used by consumers or workers that can be easily re-located, such as wireless devices associated with a personal computer, are considered to be mobile devices if they meet the 20 centimeter separation requirement.

GENERAL POPULATION / UNCONTROLLED EXPOSURE

The general population/uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity. Warning labels placed on low-power consumer devices such as cellular telephones are not considered sufficient to allow the device to be considered under the occupational/controlled category, and the general population/uncontrolled exposure limits apply to these devices.

TABLE 1—LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm²)	Averaging time (minutes)
	(B) Limits for Genera	l Population/Uncontrolle	ed Exposure	
0.3-1.34	614	1.63	*(100)	30
1.34-30	824/f	2.19/f	*(180/f ²)	30
30-300	27.5	0.073	0.2	30
300-1500	-	-	f/1500	30
1500-100,000	-	-	1.0	30

f = frequency in MHz

^{* =} Plane-wave equivalent power density

3. MEASUREMENT OF CONDUCTED PEAK OUTPUT POWER

1. BT 2.1+EDR and BT 4.0 Average output power

	A		
Band	Channel	Frequency	Output Power(dBm)
Bana	onaor	(MHz)	FHSS
2LAB	0	2402	-1.67
BT2.1	39	2441	-1.87
	78	2480	-2.54

	Channel		Output
Band		Frequency (MHz)	Power(dBm)
			GFSK
BT4.0	(at.) 0	2402	-4.94
	19	2441	-1.73
	39	2480	-3.56

4. RF EXPOSURE EVALUATION

Standalone transmission MPE evaluation

Bands	Frequency	Antenna Gain	Conducted Average Power	Time-averaging EIRP	Power density	Limit for MPE
M	(MHz)	(dBi)	(dBm)	(mW)	(mW/cm²)	(mW/cm²)
Bluetooth	2402	0.9	-1.67	0.84	0.0002	1.0

Note:

1. MPE calculation method

Power Density = EIRP/ 4π R²

Where: EIRP = P·G

P = Peak out power G = Antenna gain

R = Separation distance (20cm)
