## 1. Introduction Section

FCC ID: A4RGX7AS (WLAN parent model) and FCC ID: A4RG1AZG (variant model) use identical internal printed circuit board layouts, while the HW component for NR n41/n38 is removed.

The details are available in the operational description.

Based on their similarity, the FCC Part 15E (equipment class: NII, 6XD) reuse the WLAN parent model result and do spot-check, following the FCC KDB 484596 D01 v01. The spot check data in this report is used to justify the data reuse

The applicant should take full responsibility that the test data as referenced in this report represent compliance for this FCC ID: A4RG1AZG.

## **2. Model Difference Information**

FCC ID: A4RGX7AS (WLAN parent model) and FCC ID: A4RG1AZG (variant model) use identical internal printed circuit board layouts, and the difference in the components population:

- A4RGX7AS: 5GNR n41/n38 related components are depopulated.

The details are available in the operational description.

The detail of similarity and difference is illustrated in the operational description, and based on the information spot check on conducted power and emission was performed for ensure compliance

### 3. Spot Check Verification Data Section

Conducted power and radiated spurious emission test configurations were selected from the worst cases identified in the parent model and tested to demonstrate the test data from original model remains representative for the variant model.

Summary for power and RSE spot check for each rule entry and technology is listed as below:

Test Item	Mode	A4RGX7AS WLAN Parent Worst Result	A4RG1AZG Variant Check Result	Difference (dB)
Conducted Power (dBm)	WLAN 6GHz Standard Power client	21.71	21.47	-0.24

Test Item	Mode	ANT	A4RGX7AS WLAN Parent Worst Result	A4RG1AZG Variant Check Result	Difference (dB)
Radiated Spurious Emission (dBuV/m)	WLAN 6GHz Standard Power client	4+3	45.45	48.29	2.81

**Conclusion:**

Radiated spurious emission test against the variant model based on the worst-case condition from the original model was performed in this filing to demonstrate the test data from original model remains representative for the variant model.

The spot check emission level is not degraded more than 3dB, and the margin to the limit is greater than 1.5dB, data referencing is justified according to the guidance in the KDB inquiry
