Subject: KDB 987594 D01 U-NII 6GHz General Requirements

To Whom It May Concern:

We, Google LLC, attest the following for our device FCC ID: A4RGB62Z

- a. This device does not support 6PP (subordinate device).
- b. This device will only associate and connect with a low-power indoor Access Point, subordinate device, or standard access point and never directly link to any other client devices.
- c. This device will always initiate transmission under the control of a low power indoor AP or subordinate or standard client except access point for brief communications before joining a network. These quick messages will only occur if the 987594 D01 U-NII 6GHz General Requirements v01r02 20 client has detected an indoor AP, subordinate, or standard access point operating on a channel. These brief messages will have a time-out mechanism such that if it does not receive a response from an AP it will not continually repeat the request.
- d. This device, when associated and connected with a low-power indoor access point, subordinate or standard access point device, will operate at a power lower as advertised by the indoor access point, subordinate, or standard access point:
 - i. Lower than or equal to the power advertised by the low-power indoor access point or subordinate and never above the maximum output power allowed by the FCC grant for clients associated with indoor clients or subordinates.
 - ii. Lower than or 6 dB below the power advertised by the standard access point.
- e. We acknowledge the device is prohibited for control of or communications with unmanned aircraft systems, including drones.

Sincerely yours,

DocuSigned by:
