

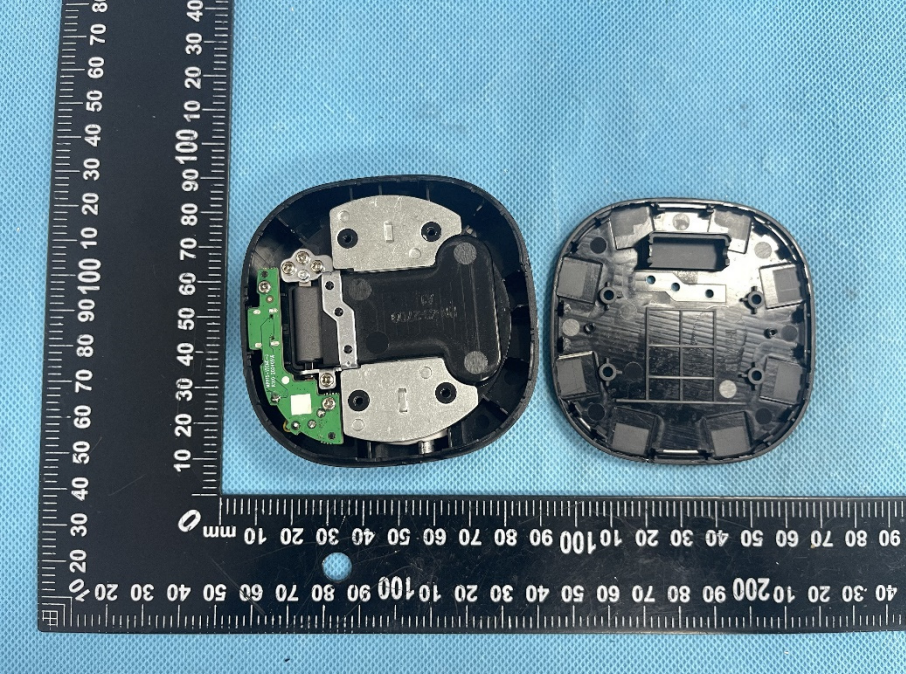

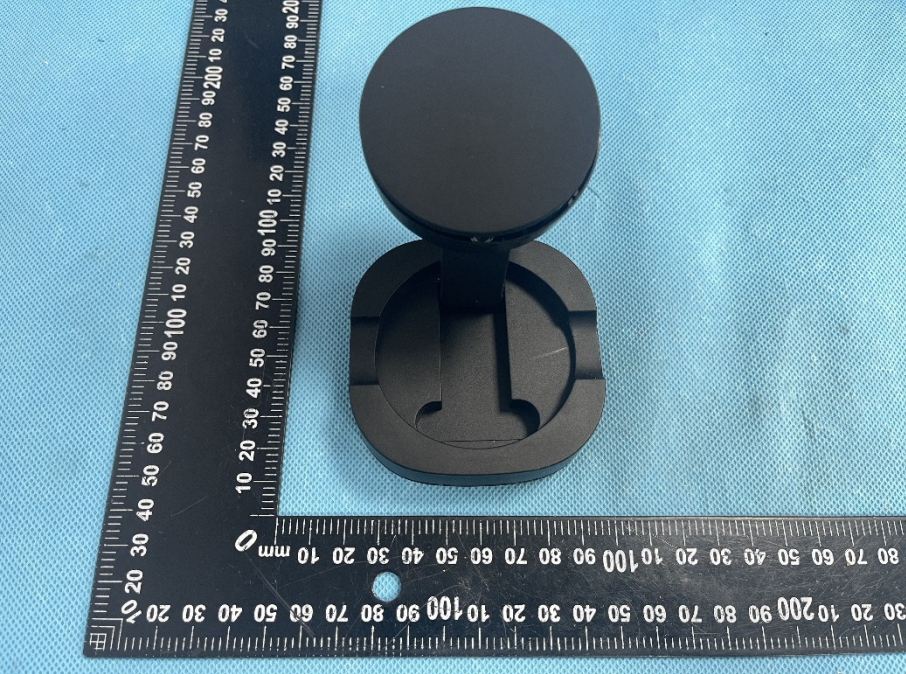

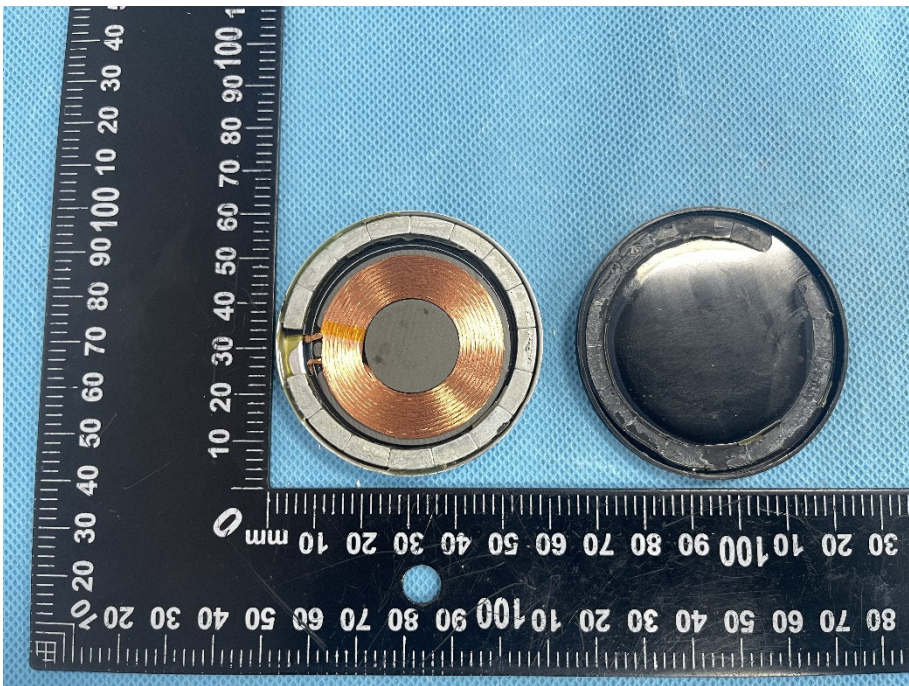

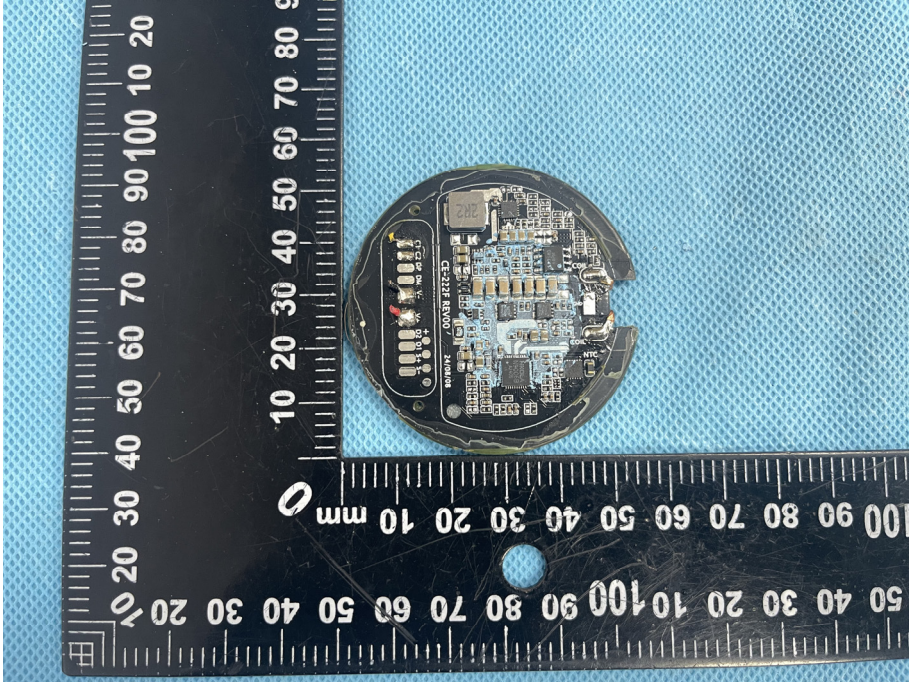

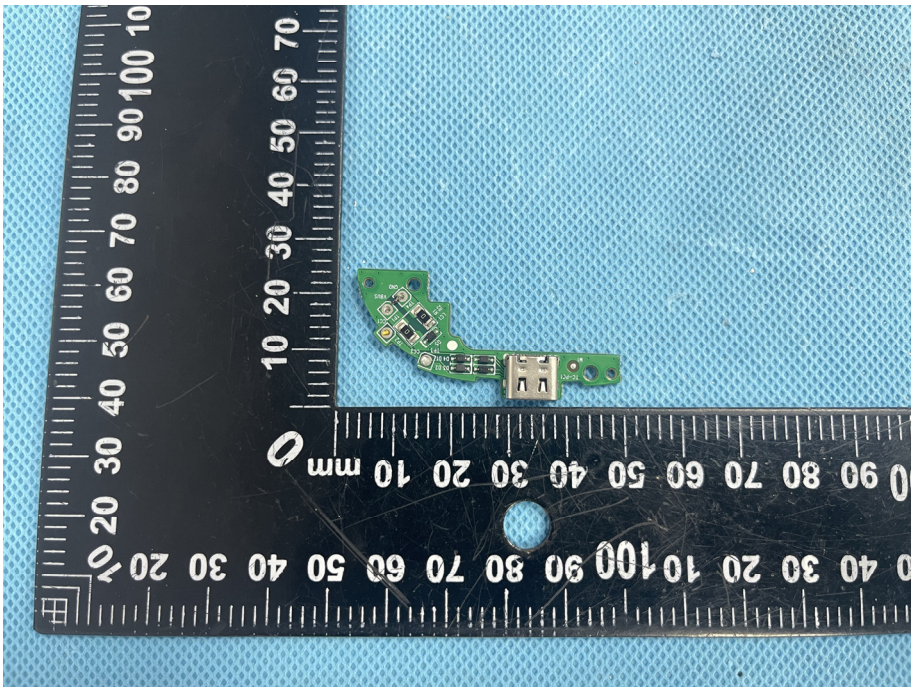

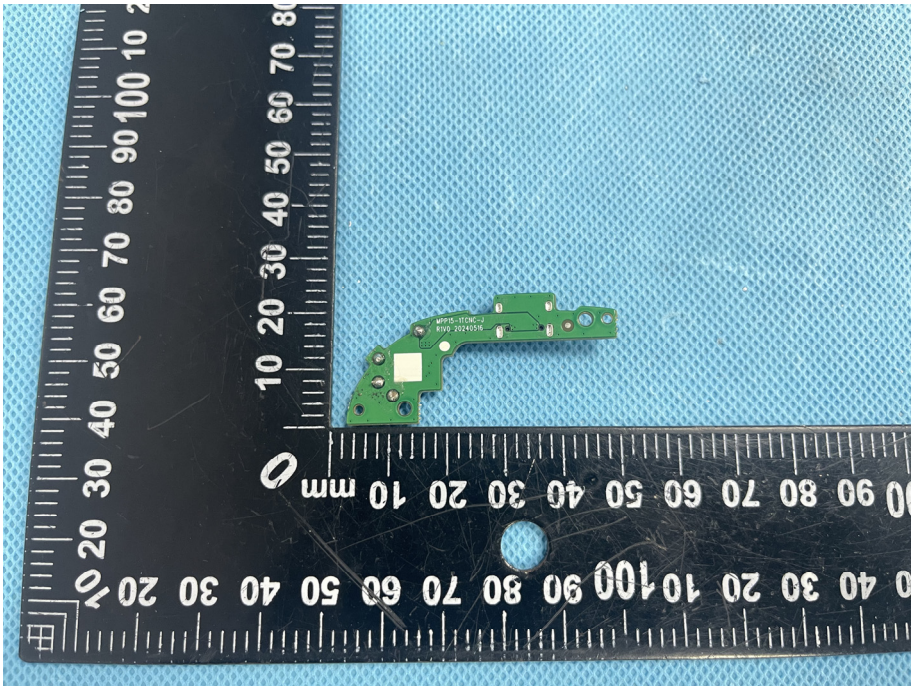

EXHIBIT 3 - EUT INTERNAL PHOTOGRAPHS

<p>EUT Housing and Board View 1</p>	 A photograph showing the internal components of an EUT housing. The housing is split into two halves, revealing a green printed circuit board (PCB) with various electronic components, including a battery, a microcontroller, and other integrated circuits. The components are mounted on a silver-colored metal base. A black L-shaped ruler is placed next to the housing for scale, with markings in millimeters. The background is a light blue textured surface.
<p>EUT Housing and Board View 2</p>	 A photograph showing the EUT housing and board from a different perspective. The housing is shown as a single piece, with the internal components visible through a circular opening. A black L-shaped ruler is placed next to the housing for scale, with markings in millimeters. The background is a light blue textured surface.

<p>EUT Housing and Board View 3</p>	 A photograph showing the EUT housing and board from a top-down perspective. The housing is black and partially open, revealing a silver-colored board with electronic components and three colored wires (red, yellow, and blue). A black ruler with white markings is placed below the components for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The background is a blue textured surface.
<p>EUT Housing and Board View 4</p>	 A photograph showing the EUT housing and board from a different perspective. The housing is black and partially open, revealing a silver-colored board with a prominent copper-colored coil. A black ruler with white markings is placed below the components for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The background is a blue textured surface.

<p>Solder Board-Component View 1</p>	 A photograph showing the top view of a circular solder board component. The component is a printed circuit board (PCB) populated with various electronic components, including integrated circuits, resistors, and capacitors. It is placed on a blue textured surface next to a black L-shaped ruler for scale. The ruler shows measurements in millimeters, with the component's diameter being approximately 45 mm.
<p>Solder Board-Component View 2</p>	 A photograph showing the bottom view of the same circular solder board component. The underside of the PCB is visible, showing the solder joints and the reverse side of the components. The component is placed on the same blue textured surface next to the same black L-shaped ruler for scale. The ruler shows measurements in millimeters, with the component's diameter being approximately 45 mm.

<p>Solder Board-Component View 3</p>	 A photograph showing a small, green, curved printed circuit board (PCB) component. The component is positioned on a blue textured surface next to a black L-shaped ruler. The ruler has white markings in millimeters, with the vertical scale on the left and the horizontal scale on the top. The component features a USB-A connector on one end and several small electronic components, including a microcontroller and various passive components, on the other. The component is oriented horizontally, with the USB connector pointing to the right.
<p>Solder Board-Component View 4</p>	 A photograph showing the same green, curved PCB component from a different perspective. The component is placed on the same blue textured surface next to the same black L-shaped ruler. In this view, the component is oriented vertically, with the USB connector pointing upwards. The top surface of the component is visible, showing the microcontroller and other components. The ruler's vertical scale is on the left, and the horizontal scale is on the top.
