Aaron,

Whirlpool is using the files for radio calibration as defined by LSC for FCC Certification. The only method to set these values is using the Litepoint tool at our control manufacturer as there is no other method to modify these parameters in the field, through service, nor at our Whirlpool factories. This file used by the control manufacturer is the file provided by LSC that set radio performance for FCC certification. This file provided by LSC will be revision controlled by Whirlpool and will be written to the control by the Whirlpool approved control manufacturer and by no other method.

A handwritten signature in black ink, appearing to read "WJ Elston III".
