Re: Tune Up Procedure

The AT1595-13/BT1595-13 does not require any tune up procedure because the amplifier/antenna are tested by an automatic test station. As part of the test, the Maximum RF output power value is measured. In case the RF output power is higher than specified in the acceptance test procedure, the AT1595-13/BT1595-13 will not pass and will receive a fail status.

The AT1595-13/BT1595-13 features Automatic Gain Control mechanism, which keeps its gain constant under all electrical and environmental conditions.

Sincerely,

Alex Sissoev  
Sr. Electronics R&D Engineer
