ATTACHMENT H — MEASUREMENT OF THE UHF NOISE FIGURES ON BULLETIN OST MP-2 AND STATISTICAL PLAN.

1. Measurements of TV Tuner Noise Figure

This documents is the material of UHF TV Receiver Noise Figure measurement.

1) Measurements Procedure. (ON BULLETIN OST MP-2 JULY 1982)

- a. The measurements of noise figures are made in a shielded room.
- b. Before testing, the television receiver and Noise figure test equipment are to be subjected to a warm-up period of sufficient time for stabilization of factors which could affect the measurements.
- c. Automatic Gain Control bias, preceding the noise output measurement point, is maintained at the level (4.0V) existing When there is no input signal with the receivers UHF input terminated in its nominal impedance (75 ohm).
- d. It must first be ascertained that the noise figure contribution of the I.F. amplifier following the measuring point not exceed 0.3dB.

If the influence of the 2nd stage is $\Delta F(\text{dB})$, then

$$\Delta F(\text{dB}) = 10 \cdot \log_{10} \left[1 + \frac{F_2 - 1}{G_1 F_1} \right] \quad \text{is given}$$

so that Tuner Gain : $G_1 = 39 \text{ dB}(\text{typical})$ then the influence of the 2nd stage is to be less than 0.3dB so that influence of the 2nd stage can be ignored.

- e. N.F. Value = Meter Reading — Balun Insertion loss

Balun Insertion loss is mentioned in ATTACHMENT H-4. Therefore, it can get noise figures of UHF Tuner by correcting Factors of this value.

2. STATISTICAL PLAN

TV Receiver UHF Noise Figure — Certification and Compliance Criteria
(July 1982)

In reply to yours of Jan. 14, 1980, we have pleasure of stating below:

Production Line compliance

We carry out QUALITY ASSURANCE for Plan C and submit the annual report of M4C8D(MVR2040A) to the FCC.

A. Sampling Size

We check Sampling Size by TV Receiver Noise Figure — Certification and Compliance Criteria 3.12.

B. Data Calculation Method

When one sampling is 20 sets, measurement data are a total 200 point, that is 20 set multiplied by 10 point/set. We check whether the measurement data comply with statistical condition on $X + KS \leq 14$, by TV Receiver Noise Figure — Certification and Compliance Criteria 3.13.

(X) 14. A statement that the contribution not exceed 0.3dB for the channel.

$$\Delta F(\text{dB}) = 10 \cdot \log_{10} \left[1 + \frac{F2 - 1}{G1F1} \right]$$

where

F1 : 7.0 dB ————— typical value

F2 : 8.5 dB ————— N.F. indicator (I.F. Noise Figure)
