

## **Label Placement Durability**

### **Bose Model 416912**

The rubber foot on the bottom of the speaker serves as a bumper for vibrations and to prevent slipping. The foot peels away from the surface to allow access to the battery. The rubber foot is tethered, not removable. There is no reason that a user would desire to detach the foot. Playing the speaker without the foot would result in buzzing sounds and “speaker walk”. For these reasons the foot is not a removable part of the device.
